Penguin  
This book explores the issue of civilian devastation in modern warfare, focusing on the complex processes that effectively

establish civilians' identity in times of war. Underpinning the physicality of war's tumult are structural forces that create landscapes of civilian vulnerability. Such forces operate in four sectors of modern warfare: nationalistic ideology, state-sponsored militaries, global media, and international institutions. Each sector promotes its own constructions

of civilian identity in relation to militant combatants: constructions that prove lethal to the civilian noncombatant who lacks political power and decision-making capacity with regards to their own survival. Civilians and Modern War provides a critical overview of the plight of civilians in war, examining the political and normative underpinnings of the decisions,

actions, policies, and practices of major sectors of war. The contributors seek to undermine the 'tunnelling effect' of the militaristic framework regarding the experiences of noncombatants. This book will be of much interest to students of war and conflict studies, ethics, conflict resolution, and IR/Security Studies.

"Packed with inspirational, useful, and thought-provoking essays on the craft of writing from some of the best writers around."

—Minneapolis Star Tribune

Teachers, exercises, mentors, critiques, humor, and inspiration: these form the fuel all writers need when they get down to work every day. For decades the Loft Literary Center has provided this fuel to an enormous

community of writers. Views from the Loft brings together the collected wisdom of that community—it's authors, students, and editors—giving anyone the tools and inspiration necessary to thrive in the writing life. A who's who of writers on writing ranging from the National Book Award-winning poet Mark Doty to Newbery Medal-winning children's author Kate DiCamillo, and

<p>touching on issues as delicate as the representation of family in memoir and as hilarious as a “sad-epiphany poem” mad lib for frustrated poets, this book is an essential collection of crucial tips and challenging questions for everyone who puts pen to page. [The Passion of the Last Tsar and Tsarina](#) Penguin Massively parallel processing is currently the most promising answer to the

quest for increased computer performance. This has resulted in the development of new programming languages and programming environments and has stimulated the design and production of massively parallel supercomputers. The efficiency of concurrent computation and input/output essentially depends on the proper utilization of specific architectural features of the

underlying hardware. This book focuses on development of runtime systems supporting execution of parallel code and on supercompilers automatically parallelizing code written in a sequential language. Fortran has been chosen for the presentation of the material because of its dominant role in high-performance programming for scientific and engineering applications.
