In recent years, social innovation has experienced a steep career. Numerous national governments and large organisations like the OECD, the European Commission and UNESCO have adopted the term. Social innovation basically means that people adopt new social practices in order to meet social needs in a different or

more effective way. Prominent examples of the past are the Red Cross and the social welfare state or, at present, the internet 2.0 transforming our communication and cooperation schemes, requiring new management concepts, even empowering social revolutions. The traditional concept of innovation as successful new technological products needs fundamental rethinking in a society marked by knowledge and services, leading to a new and enriched paradigm of innovation. There is multiple evidence that social innovation will become of growing importance not only concerning social integration, equal opportunities and dealing with the greenhouse effects but also with regard to preserving

and expanding the innovative capacity of companies and societies. While political authorities stress the social facets of social innovation, this book also encompasses its societal and systemic dimensions, collecting the scientific expertise of renowned experts and scholars from all over the world. Based on the contributions of the first world-wide science convention on social innovation from September 2011 in Vienna, the book provides an overview of scientific approaches to this still relatively new field. Forewords by Agnès HUBERT (Member of the Bureau of European Policy Advisers (BEPA) of the European Commission) and Antonella Noya (Senior Policy Analyst at OECD, manager of the OECD LEED Forum on Social Innovations) Managerial Accounting, Student Value Edition Wiley

Understanding the influence and interaction between physical

activity and the endocrine system are of paramount importance in dealing with a multitude of health problems. In *Endocrinology of Physical Activity and Sport*, renowned physicians and researchers provide a comprehensive and expanded update on the scientific, clinical and practical components of endocrinology as related to sport and exercise. The authors thoroughly review what is known about how such activity effects the endocrine system and how in turn these hormonal responses affect many other organs and systems of the body. In addition, aspects of endocrinology in non-glandular tissue which have endocrine actions are addressed; for example, adipocytes and the release of leptin and related adipocytokines. Further, a wide range of clinically related topics such as athletic amenorrhea, osteopenia, sarcopenia, and hypogonadism are included. This new edition critically integrates what is known about the complex interaction of the endocrine system in the sports context and will again prove immensely valuable to all physicians and clinical investigators treating those active in sports today.
