 The US decision to drop an atomic bomb on the Japanese city of Hiroshima on 6 August 1945 remains one of the most controversial events of the twentieth century. However, the controversy over the rights and wrongs of

dropping the bomb has tended to obscure a number of fundamental and sobering truths about the development of this fearsome weapon. The principle of killing thousands of enemy civilians from the air was already well established by 1945 and had been practised on numerous occasions by both sides during the Second World War. Moreover, the bomb dropped on Hiroshima was conceived and built by an international community of scientists, not just by the Americans. Other nations (including Japan and Germany) were also developing atomic bombs in the first half of the 1940s, albeit haphazardly. Indeed, it is difficult to imagine any

combatant nation foregoing the use of the bomb during the war had it been able to obtain one. The international team of scientists organized by the Americans just got there first. As this fascinating new history shows, the bomb dropped by a US pilot that hot August morning in 1945 was in many ways the world's offspring, in both a technological and a moral sense. And it was the world that would have to face its consequences, strategically, diplomatically, and culturally, in the years ahead.

Let's Start Talking was conceived of as a lower-level companion to the intermediate Can't Stop Talking and the advanced Nonstop Discussion Workbook. Continuing the tradition of Nonstop discussion, Let's Start Talking offers upper-beginning and lower-intermediate students an opportunity to express their ideas about stimulating problems in an

interactive small group setting. As with the previous books, the purpose of this text is to generate discussions and conversations in which the students do almost all the talking. *Timby's Fundamental Nursing Skills and Concepts* Lippincott Williams & Wilkins Complex Analysis and Applications, Second Edition explains complex analysis for students of applied mathematics and engineering. Restructured and completely revised, this textbook first develops the theory of complex analysis, and then examines its geometrical interpretation and application to Dirichlet and Neumann boundary value problems. A discussion of complex analysis

now forms the first three chapters of the book, with a description of conformal mapping and its application to boundary value problems for the two-dimensional Laplace equation forming the final two chapters. This new structure enables students to study theory and applications separately, as needed. In order to maintain brevity and clarity, the text limits the application of complex analysis to two-dimensional boundary value problems related to temperature distribution, fluid flow, and electrostatics. In each case, in order to show the relevance of complex analysis, each application is preceded by mathematical background that demonstrates how a

real valued potential function and its related complex potential can be derived from the mathematics that describes the physical situation.

First he'll learn her most intimate secrets. Then he'll arouse her deepest passions. He's the lover she's been waiting for: the man who can rescue her from her wicked past—for a price—in Madeline Hunter's tale of sin, seduction, and irresistible, impossible love. He catches her eye across the dining room—a handsome stranger who stands out among the lewd noblemen and bawdy painted women. But their worlds are about to collide in a way

Roselyn Longworth could never have imagined. For before the night is out, she will be auctioned off to the highest bidder...and Kyle Bradwell will lead her from one kind of hell to another. Yet from the moment he wins her, Kyle treats Rose with a gentleness she hasn't known since a family scandal destroyed her reputation. And when she finally learns what is really driving Kyle, it's too late. For Rose has fallen for the man who knows her most intimate secrets. Now he has stunned her with a proposal of marriage—the first step in a seduction that will demand nothing less than her complete surrender....
