 Numerous reprehensible corporate, governmental, and nonprofit activities over recent years have highlighted the existence of organizational evil. Unlike other works on the topic, this book fully develops the concept of organizational evil, conceptually weaving the interchange between evil individuals (microlevel) who ultimately create the organizational environment that is evil, and the macrolevel elements of policy, culture, and manipulations of the social environment.

Restoring Trust in Organizations and Leaders is the first volume to adopt the multidisciplinary approach required to understand the decline in public trust in contemporary institutions, and to propose and assess remedies.

Volume One: Micro Approaches Routledge
 It is stated that the concept of organizational culture reveals that the behavior of people in organizations is highly influenced by the established attitudes and values of their members, and objective characteristics of organizational culture are everything that exists regardless of its members' thoughts. A lot of researchers of organizational culture continue to look for answers about these relationships. Thus, organizational culture is a phenomenon that constantly receives both researchers' and practitioners' attention. This book supplies the reader with a comprehensive overview of the latest results of studies carried out by scientists from different countries. A lot of attention is given to role of national cultures, organizational culture as a determinant of competitiveness, organizational structures, model of culture for innovation, transformational leadership, leadership competencies, project activity etc.

Handbook of Police Psychology Routledge
 In recent years, scholars have focused more on the "dark sides of leadership." Both the negative and positive aspects of the relationship between leaders and followers are considered. But the relationship between leaders and followers is also influenced by the context in which the relationship occurs. Organizational aspects such as culture and structures are studied in relation to how negative leadership develops. Organizations, just like humans, are able to develop justifications for their actions, to self-aggrandize by claiming their exclusivity. In this book, the dark sides of organizational behaviors and leadership are considered from different aspects and contexts. The book contributes knowledge of how negative leadership develops, what part organizational structures play, and what the consequences are for the leader, the subordinates and the organization.

Organizational Behaviour Simon and Schuster

Anyone who has ever had a job has probably experienced work-related stress at some point or another. For many workers, however, job-related stress is experienced every day and reaches more extreme levels. Four in ten American workers say that their jobs are "very" or "extremely" stressful. Job stress is recognized as an epidemic in the workplace, and its economic and health care costs are staggering: by some estimates over \$ 1 billion per year in lost productivity, absenteeism and worker turnover, and at least that much in treating its health effects, ranging from anxiety and psychological depression to cardiovascular disease and hypertension. Why are so many American workers so stressed out by their jobs? Many psychologists say stress is the result of a mismatch between the characteristics of a job and the personality of the worker. Many management consultants propose reducing stress by "redesigning" jobs and developing better individual strategies for "coping" with their stress. But, these explanations are not the whole story. They don't explain why some jobs and some occupations are more stressful than other jobs and occupations, regardless of the personalities and "coping strategies" of individual workers. Why do auto assembly line workers and air traffic controllers report more job stress than university professors, self-employed business owners, or corporate managers (yes, managers!)? The authors of *Work and Mental Health in Social Context* take a different approach to understanding the causes of job stress. Job stress is systematically created by the characteristics of the jobs themselves: by the workers' occupation, the organizations in which they work, their placements in different labor markets, and by broader social, economic and institutional structures, processes and events. And disparities in job stress are systematically determined in much the same way as are other disparities in health, income, and mobility opportunities. In taking this approach, the authors draw on the observations and insights from a diverse field of sociological and economic theories and research. These go back to the nineteenth century writings of Marx, Weber and Durkheim on the relationship between work

and well-being. They also include the more contemporary work in organizational sociology, structural labor market research from sociology and economics, research on unemployment and economic cycles, and research on institutional environments. This has allowed the authors to develop a unified framework that extends sociological models of income inequality and "status" attainment (or allocation) to the explanation of non-economic, health-related outcomes of work. Using a multi-level structural model, this timely and comprehensive volume explores what is stressful about work, and why; specifically address these and questions and more: -What characteristics of jobs are the most stressful; what characteristics reduce stress? -Why do work organizations structure some jobs to be highly stressful and some jobs to be much less stressful? Is work in a bureaucracy really more stressful? -How is occupational "status" occupational "power" and "authority" related to the stressfulness of work? -How does the "segmentation" of labor markets by occupation, industry, race, gender, and citizenship maintain disparities in job stress? - Why is unemployment stressful to workers who don't lose their jobs? -How do public policies on employment status, collective bargaining, overtime affect job stress? -Is work in the current "Post (neo) Fordist" era of work more or less stressful than work during the "Fordist" era? In addition to providing a new way to understand the sociological causes of job stress and mental health, the model that the authors provide has broad applications to further study of this important area of research. This volume will be of key interest to sociologists and other researchers studying social stratification, public health, political economy, institutional and organizational theory.

These proceedings of the 7th European Conference on Technology Enhanced Learning (EC-TEL 2010) exemplify the highly relevant and successful research being done in TEL. Because of this great work, this year's conference focused on "Sustaining TEL: From Innovation to Learning and Practice." The last decade

has seen significant investment in time, people, and money) in innovating education and training. The time has come to make the bold step from small-scale innovation research and development to large-scale and sustainable implementation and evaluation. It is time to show the world (i.e., government, industry, and the general population) that our field has matured to the stage that sustainable learning and learning practices - both in schools and in industry - can be achieved based upon our work. The present day TEL community now faces new research questions related to large-scale deployment of technology enhanced learning, supporting individual learning environments through mashups and social software, new approaches in TEL certification, and so forth. Furthermore, new approaches are required for the design, implementation, and use of TEL to improve the understanding and communication of educational desires and the needs of all stakeholders, ranging from researchers, to learners, tutors, educational organizations, companies, the TEL industry, and policy makers. And the TEL community has taken up this challenge. As one can see in this volume, in its 7th year the conference was once more able to assemble the most prominent and relevant research results in the TEL area. The conference generated more than 150 submissions which demonstrate a very lively interest in the conference theme, thus significantly contributing to the conference's success.
