Most of this material remains as current and topical today as it was a quarter of a century ago, because the progress that has been made in vegetation science is in the computer-based treatment of sample data, not in the creation of new sampling protocols. *Aims and Methods of Vegetation Ecology* Supplementary resources. ... To characterize forest and understory structure and composition, at each sampling station we performed four in situ vegetation measurements at 10-m from the camera trap, towards each of the four cardinal points (N = 4 points). At each point, we identified the presence and abundance of several indicator plant species, ... (PDF) Aims and methods of vegetation ecology Note: Citations are based on reference standards.
