After America's Iraq adventure devolved into a debacle, a chorus of commentators and analysts noted that the U.S. military had no plan to fight a counterinsurgency campaign. Given the failure of conventional tactics, America in the last two years has redoubled its efforts to develop a new strategy to fight the Iraqi insurgency, and has gone so far to place our leading counterinsurgency expert, General David Petraeus, in charge of the Iraq theater. In sum, there seems to be a growing consensus that for better or worse, counterinsurgency will be a core tactic in future American military campaigns. Iraq, of course, presents special problems to the U.S. because of the intensity of religious belief and sectarianism. How do we fight against an insurgency that so often strategically positions itself on 'hallowed ground'--mosques and shrines? Yet Iraq is not unique. As the contributors to Treading on Hallowed Ground show, counterinsurgency efforts on religiously contentious terrain is a widespread phenomenon in recent times, ranging from North Africa to Central and Southeast Asia. Here, C. Christine Fair and Sumit Ganguly have assembled an impressive group of experts to explore the most important counterinsurgency efforts in sacred spaces in our era: churches in Israel, mosques and shrines in Iraq, the Sikh Golden Temple in India, mosques and temples in Kashmir, the Krue Se Mosque in Thailand, and the Grand Mosque in Saudi Arabia. Taken together, the essays comprise the first comprehensive account of this increasingly pivotal component of contemporary war.

Cross-cultural Perspectives in Medical Ethics National Academies Press

Advances in trauma care have accelerated over the past decade, spurred by the significant burden of injury from the wars in Afghanistan and Iraq. Between 2005 and 2013, the case fatality rate for United States service members injured in Afghanistan decreased by nearly 50 percent, despite an increase in the severity of injury among U.S. troops during the same period of time. But as the war in Afghanistan ends, knowledge and advances in trauma care developed by the Department of Defense (DoD) over the past decade from experiences in Afghanistan and Iraq may be lost. This would have implications for the quality of trauma care both within the DoD and in the civilian setting, where adoption of military advances in trauma care has become increasingly common and necessary to improve the response to multiple civilian casualty events. Intentional steps to codify and harvest the lessons learned within the military's trauma system are needed to ensure a ready military medical force for future combat and to prevent death from survivable injuries in both military and civilian systems. This will require partnership across military and civilian sectors and a sustained commitment from trauma system leaders at all levels to assure that the necessary knowledge and tools are not lost. A National Trauma Care System defines the components of a learning health system necessary to enable continued improvement in trauma care in both the civilian and the military sectors. This report provides recommendations to ensure that lessons learned over the past decade from the military's experiences in Afghanistan and Iraq are sustained and built upon for future combat operations and translated into the U.S. civilian system.

The Institute of Medicine study Crossing the Quality Chasm (2001) recommended that an interdisciplinary summit be held to further reform of health professions education in order to enhance quality and patient safety. Health Professions Education: A Bridge to Quality is the follow up to that summit, held in June 2002, where 150 participants across disciplines and occupations developed ideas about how to integrate a core set of competencies into health professions education. These core competencies include patient-centered care, interdisciplinary teams, evidence-based practice, quality improvement, and informatics. This book recommends a mix of approaches to health education improvement, including those related to oversight processes, the training environment, research, public reporting, and leadership. Educators, administrators, and health professionals can use this book to help achieve an approach to education that better prepares clinicians to meet both the needs of patients and the requirements of a changing health care system.
