About Exam: IBPS RRB  
Exam is conducted  
every year by IBPS for  
selection to the post of  
both IBPS RRB  
Assistant and IBPS RRB  
Officer Cadre in  
Regional Rural Banks

spread across the  
country. Office  
Assistants in IBPS RRB  
have to take up the  
responsibilities of  
many office tasks like  
opening an account,  
cash transactions,  
printing of passbooks,  
fund/ balance  
transfers, payment  
withdrawals, and cash  
counters management,  
etc. Exam Patterns - It  
is the first stage of the  
RRB recruitment  
process. For IBPS RRB  
Assistant 2021, Exam  
will be conducted in  
two phases:  
Preliminary Exam and  
Mains Exam. The  
candidates that will  
clear the prelims exam

will appear for the mains exam. The duration of the exam will be 2 hours. It comprises 5 sections (Reasoning, Numerical Ability, General Awareness, English / Hindi Language, and Computer Knowledge) with a total weightage of 200 marks. No interview process will be conducted for selecting candidates to the post of Office Assistant. Selection will be made purely on the marks obtained by candidate in his/her Mains Examination. The exams are online-based having multiple-choice questions. There is a negative marking of one-fourth marks for each wrong answer. Negative Marking -1/4

*Data and Control* Disha Publications  
The book "FCI Study Package for Assistant Grade II & III Recruitment Exam for Phase I & II 2nd Edition" has been written exclusively for the vacancies of General, Depot, Steno, Technical and Accounts cadre. The Salient Features of the Book: • Inclusion of 2015 Solved Paper • Comprehensive Sections covering syllabus of Phase I & II Exams. • The book broadly covers Quantitative Aptitude, General Intelligence Reasoning & General Intelligence, English Language, Data Analysis/ Interpretation and General Awareness; • Exercise with Solutions at the end of each chapter. • The book covers the

complete syllabus of Phase I & Phase II (Paper 1 & 5). The book is also useful for Paper 2 & 3 of Phase II

**Programming Languages - Information Retrieval**

by Mocktime Publication

This book contains the topics of artificial intelligence and deep learning that do have much application in real-life problems. The concept of uncertainty has long been used in applied science, especially decision making and a logical decision must be made in the field of uncertainty or in the real-life environment that is formed and combined with vague concepts and data. The chapters of this book are connected to the new concepts and aspects of decision

making with uncertainty. Besides, other chapters are involved with the concept of data mining and decision making under uncertain computations.

Dr. Dobb's Journal  
Elsevier

Innovations in software engineering have ushered in an era of wired technology. We are constantly surrounded by the products of this revolution. With this book, the author has created a resourceful cache of latest information for aspiring software engineers, preparing them for a productive industry experience.

Elaboration on concepts of software development and engineering, the book gives an insightful view of the fundamentals of

system design, coding and documentation, software metrics, management and cost estimation. Based upon the updated university curriculum, this book is a student-friendly work that explains difficult concepts with neat illustrations and examples. Topic wise discussions on system testing and computer-aided software engineering go a long way in equipping budding software engineers with the right knowledge and expertise. This is a great book for self-based learning and for competitive examinations. It comes with a glossary of technical terms. Key Features • Lucid, well-explained concepts with solved examples • Complete coverage of the updated university

syllabus • Chapter-end summaries and questions for quick review • Relevant illustrations for better understanding and retention • Glossary of technical terms • Solution to previous years' university papers  
*Revue roumaine des sciences sociales* Faber Publishing  
 Aimed at the computer-literate person wishing to find out about the reality of exploiting the promise of artificial intelligence (AI) in practical, maintainable software systems, this text tries to avoid the hype usually associated with the subject. Instead, it presents the realities, the problems, the current state of the art, and future directions.  
Industrial and Engineering

Applications of Artificial Intelligence and Expert Systems JAYPEE BROTHERS PUBLISHERS  
First published in 1998. Routledge is an imprint of Taylor & Francis, an informa company.

Papers of the First International Federation for Information Processing (IFIP) World Conference on Computer Education, Held August 24-28, 1970 in Amsterdam, The Netherlands Routledge

A Step Towards Verified Software  
Worries about the reliability of software are as old as software itself; techniques for allaying these worries predate even James King's 1969 thesis on "A program verifier. " What gives the whole topic a new urgency is the conjunction of

three phenomena: the blitz-like spread of software-rich systems to control ever more facets of our world and our lives; our growing impatience with deficiencies; and the development—proceeding more slowly, alas, than the other two trends—of techniques to ensure and verify software quality. In 2002 Tony Hoare, one of the most distinguished contributors to these advances over the past four decades, came to the conclusion that piecemeal efforts are no longer sufficient and proposed a "Grand Challenge" intended to achieve, over 15 years, the production of a verifying compiler: a tool that while processing programs would also guarantee their adherence to

specified properties of correctness, robustness, safety, security and other desirable properties. As Hoare sees it, this endeavor is not a mere research project, as might normally be carried out by one team or a small consortium of teams, but a momentous endeavor, comparable in its scope to the successful mission to send a man to the moon or to the sequencing of the human genome.

Noted survey experts present recent developments in telephone survey techniques from around the world, describing work in commercial settings, academic research, and governmental statistical agencies.

There are reports from the United States, several European countries, and Australia on trends in coverage of household populations, effects due to mode of data collection, and the

state of the art in technology. Also covered are choice of target population, sample design, questionnaire construction, interviewing techniques, measurement error issues, nonresponse characteristics, administrative issues, and the use of Computer Assisted Telephone Interviewing (CATI). Includes in-depth reviews of the literature.

Python for Everybody is designed to introduce students to programming and software development through the lens of exploring data. You can think of the Python programming language as your tool to solve data problems that are beyond the capability of a spreadsheet. Python is an easy to use and easy to learn programming language that is freely available on Macintosh, Windows, or Linux

computers. So once you learn Python you can use it for the rest of your career without needing to purchase any software. This book uses the Python 3 language. The earlier Python 2 version of this book is titled "Python for Informatics: Exploring Information". There are free downloadable electronic copies of this book in various formats and supporting materials for the book at [www.pythonlearn.com](http://www.pythonlearn.com). The course materials are available to you under a Creative Commons License so you can adapt them to teach your own Python course.

Applied Systems and Cybernetics, Volume V: Systems Approaches in Computer Science and Mathematics covers the proceedings of the International Congress on Applied Systems Research and Cybernetics. This book discusses trends and advances in the application of systems science and cybernetics to various fields. This volume reviews the systems approaches in computer science and mathematics and concentrates on several major areas of systems research in computer science and theoretical and applied mathematics. This book will be of great interest to computer scientists interested in the development of the theories and

applications of  
computer science.
