Harvard MathematicsThe complex numbers are formally defined as the field $\mathbb{C} = \mathbb{R}[i]$, where $i^2 = -1$. They are represented in the Euclidean plane by $z = (x,y) = x+iy$. There are two square-roots of 1 in \mathbb{C} ; the number i is the one with positive imaginary part. An important role is played by the Galois involution $\bar{z} = \overline{z}$. We define $N(z) = z\bar{z} = x^2 + y^2$. (Compare the case of a real quadratic field, Advanced Complex Analysis - Harvard Mathematics Department Advanced Complex Analysis. Math 213a / Tu Th 10-11:30 / Science Center 216. Harvard University - Fall 2017. Instructor: Curtis T McMullen (ctm@math.harvard.edu) Required Texts. Ahlfors, Complex Analysis.
