This well-illustrated resource provides vital cross-section information for the atomic and molecular collision processes taking place in the boundary region of magnetically confined fusion plasmas and in other laboratory and astrophysical low-temperature plasmas. The expertly assessed information in this noteworthy volume includes the most recent experimental and theoretical results presented in a convenient format. Coverage includes the processes of electron-impact excitation and ionization of plasma edge atoms, electron-ion recombination, dissociative collision processes involving electrons and much more.

The Me?tiyo Ra?ho?s of Me?to, Rajasthan is a treasure for scholars of Rajput history. Richard D. Saran and Norman P. Ziegler, whose contributions to Rajput studies are well known to specialists in the field, have given us a work of deep and exacting scholarship. It is the culmination of decades devoted to the study of Middle Marwari chronicles from Rajasthan. The sources translated here provide access to the fortunes of a branch of the Jodhpur royal family, and in doing so they illuminate the larger world of Rajputs in the middle period. The Me?tiyo Ra?ho?s are significant for several reasons. Their story traces the emergence of a Rajput brotherhood into local prominence and follows the establishment of their kingdom on the eastern edge of Marva? as a defined territorial unit. The evolution of the Me?tiyos as a brotherhood passed through several clearly defined stages, including a relationship with the house of Jodhpur that ranged from mutual support among brothers to hostility and clear separation. A study of the Me?tiyos in this context provides a unique view of the formation of a strong and independent Rajput cadet line, of the establishment and defense of a local territory, and of the internal relations among Rajput brotherhoods regarding issues of precedence, honor, patronage, and service.

The translations are accompanied by an extensive explanatory apparatus taking various forms, which includes a valuable essay on Rajput social organization, complete genealogies, and biographies of all the major personages of the chronicles.

Over the last 10 years the syndrome of severe acute renal failure has progressively changed in its epidemiology. It is now most frequently seen in critically ill patients, typically in the context of sepsis and multiorgan failure. This epidemiologic change has meant that intensive care physicians and nephrologists must now work in close cooperation at all times and must take many complex issues of prevention, pathogenesis, and management into account that they did not previously have to tackle.

Simultaneously, the last 10 years have seen the development of major technical and conceptual changes in the field of renal replacement therapy. There are now previously unavailable therapeutic options that provide physicians with a flexible and rapidly evolving armamentarium. The nutrition of these patients, previously limited by the partial efficacy of renal replacement therapies, has also become more aggressive and more in tune with the needs of critically ill patients. Increased understanding of the pathogenesis of the multi organ failure syndrome has focused on the role of many soluble "mediators of injury" (cytokines, leukotrienes, prostanoids etc.). These molecules are likely to participate in the pathogenesis of acute renal failure. Their generation and disposal is also affected by different techniques of artificial renal support.

With optical fiber telecommunications firmly entrenched in the global information infrastructure, a key question for the future is how deeply will optical communications penetrate and complement other forms of communication (e.g., wireless access, on-premises networks, interconnects, and satellites). *Optical Fiber Telecommunications*, the seventh edition of the classic series that has chronicled the progress in the research and development of lightwave communications since 1979, examines present and future opportunities by presenting the latest advances on key

topics such as: Fiber and 5G-wireless access networks Inter- and intra-data center communications Free-space and quantum communication links Another key issue is the use of advanced photonics manufacturing and electronic signal processing to lower the cost of services and increase the system performance. To address this, the book covers: Foundry and software capabilities for widespread user access to photonic integrated circuits Nano- and microphotonic components Advanced and nonconventional data modulation formats The traditional emphasis of achieving higher data rates and longer transmission distances are also addressed through chapters on space-division-multiplexing, undersea cable systems, and efficient reconfigurable networking. This book is intended as an ideal reference suitable for university and industry researchers, graduate students, optical systems implementers, network operators, managers, and investors. Quotes: "This book series, which owes much of its distinguished history to the late Drs. Kaminow and Li, describes hot and growing applied topics, which include long-distance and wideband systems, data centers, 5G, wireless networks, foundry production of photonic integrated circuits, quantum communications, and AI/deep-learning. These subjects will be highly beneficial for industrial R&D engineers, university teachers and students, and funding agents in the business sector." Prof. Kenichi Iga President (Retired), Tokyo Institute of Technology "With the passing of two luminaries, Ivan Kaminow and Tingye Li, I feared the loss of one of the premier reference books in the field. Happily, this new version comes to chronicle the current state-of-the-art and is written by the next generation of leaders. This is a must-have reference book for anyone working in or trying to understand the field of optical fiber communications technology." Dr. Donald B. Keck Vice President, Corning, Inc. (Retired) "This book is the seventh edition in the definitive series that was previously marshaled by the extraordinary Ivan Kaminow and Tingye Li, both sadly no longer with us. The series has charted the remarkable progress made in

the field, and over a billion kilometers of optical fiber currently snake across the globe carrying ever-increasing Internet traffic. Anyone wondering about how we will cope with this incredible growth must read this book." Prof. Sir David Payne Director, Optoelectronics Research Centre, University of Southampton Updated edition presents the latest advances in optical fiber components, systems, subsystems and networks Written by leading authorities from academia and industry Gives a self-contained overview of specific technologies, covering both the state-of-the-art and future research challenges
