 This book examines potential technologies for replacing antipersonnel landmines by 2006, the U.S. target date for signing an international treaty banning these weapons. *Alternative Technologies to Replace Antipersonnel Landmines* emphasizes the role that technology can play to

allow certain weapons to be used more selectively, reducing the danger to uninvolved civilians while improving the effectiveness of the U.S. military. Landmines are an important weapon in the U.S. military's arsenal but the persistent variety can cause unintended casualties, to both civilians and friendly forces. New technologies could replace some, but not all, of the U.S. military's antipersonnel

landmines by 2006. In the period following 2006, emerging technologies might eliminate the landmine totally, while retaining the necessary functionalities that today's mines provide to the military. *Handbook of Defence Electronics and Optronics* DIANE Publishing
 The Apache Longbow helicopter is designed to conduct precision attacks in adverse

weather and on battlefields obscured by smoke, automatically engage multiple targets, and provide fire-and-forget missile capability. The Apache Longbow configuration consists of a modified airframe, a fire control radar, and a new Longbow (radio frequency) Hellfire missile. The Army plans to upgrade the entire fleet of 758 Apache helicopters to the Apache Longbow

configuration but outfit only 227 with the radar and a more powerful 701C engine. The remaining 531 non-radar-equipped Apache Longbows will be equipped with the less powerful 701 engine, even though they will be reconfigured to accept the radar and upgraded 701C engine. In its fiscal year 2000-2005 program plan, the Army has proposed a reduction in the number of Apaches that

will be converted to the Apache Longbow configuration. The April 1994 Apache Longbow's operational requirements document (ORD) prescribes performance capabilities required for the system's survivability and lethality. These capabilities include meeting the vertical flight requirement, carrying the Longbow Hellfire missile, and passing target data when in line of sight

and not in the line of sight. For the Apache Longbow, the Army has identified performance objectives (desired capabilities) and performance thresholds (minimum capabilities). The Army designated selected thresholds as key performance parameters. The Apache Longbow program needs to be reassessed because the helicopter does not meet two key user

requirements. The Army's 227 radar-equipped Apache Longbow helicopters will be too heavy to achieve the validated VROC requirement of 450 feet per minute in the combat mission configuration when carrying a full fuel load and 12 missiles. *Hearings Before a Subcommittee of the Committee on Appropriations, House of Representatives, One Hundred*

Fourth Congress, Second Session Macmillan DoD plans to spend more than \$200 billion on interdiction weapons over the next 15 to 20 years to add to their extensive capabilities to interdict an enemy. Modernizing U.S. forces is vital to preserving DoD's combat edge, but it also challenges DoD to make investments only "where there is clearly a substantial payoff." This

report evaluates the military's current and future aggregate interdiction assets for striking enemy targets, and the effect of the planned modernization programs on total interdiction capabilities and alternatives to those programs.

Apache Longbow Helicopter: Fire Control Radar Not Ready for Multiyear Procurement

U.S. Combat Air Power National Academies Press Handbook of Defence Electronics and Optronics Anil K. Maini, Former Director, Laser Science and Technology Centre, India

First complete reference on defence electronics and optronics Fundamentals, Technologies and Systems

This book provides a complete account of defence electronics and optronics. The content is broadly divided into three categories: topics specific to defence electronics; topics relevant to defence optronics; and topics that have both electronics and optronics counterparts. The book covers each of the topics in their entirety from fundamentals to advanced concepts, military

systems in use and related technologies, thereby leading the reader logically from the operational basics of military systems to involved technologies and battlefield deployment and applications. Key features:

- Covers fundamentals, operational aspects, involved technologies and application potential of a large cross-section of military

systems. Discusses emerging technology trends and development and deployment status of next generation military systems wherever applicable in each category of military systems. • Amply illustrated with approximately 1000 diagrams and photographs and around 30 tables. • Includes salient features, technologies and deployment

aspects of hundreds of military systems, including: military radios; ground and surveillance radars; laser range finder and target designators; night visions devices; EW and EO jammers; laser guided munitions; and military communications equipment and satellites. Handbook of Defence Electronics and Optronics is an essential guide for graduate students, R&D scientists,

engineers engaged in manufacturing defence equipment and professionals handling the operation and maintenance of these systems in the Armed Forces.

Department of Defense Appropriations for 1995: Defense reinvestment and conversion programs

Apache Longbow Helicopter: Fire Control Radar Not Ready for Multiyear Procurement

The Longbow is a modification

of the Apache helicopter that consists of an upgraded airframe, a newly developed radar, and the Longbow Hellfire missile. The Apache Longbow is designed to conduct precision attacks in adverse weather conditions, automatically engage multiple targets, provide fire and forget missile capability, and operate on the digital battlefield of the future.

The radar, the key component of the Longbow, is designed to provide the helicopter with the capability to automatically detect, classify, and prioritize targets. In 1991, the Army planned to develop and procure 227 Longbow Apache helicopters. In May 1993, the program was restructured to upgrade the entire fleet of 758 helicopters to the Apache Longbow configuration but outfit only

227 with the fire control radar and a more powerful 701C engine. Full rate production of both the Apache Longbow airframe and fire control radar was authorized in October 1995. The first contract for 10 fire control radars was awarded in March 1993, and the second contract was finalized in January 1997 for an additional 11 radars. The Army plans to award a multiyear

contract for the fire control radar in December 1997. Hearings on National Defense Authorization Act for Fiscal Year 1997-- H.R. 3230 and Oversight of Previously Authorized Programs Before the Committee on National Security, House of

Representatives, One Hundred Fourth Congress, Second Session Capstone Classroom "In April of 2003, a stunned world looked on as the armed forces of the United States and Britain conducted a lightning-fast military campaign against Iraq. Confounding predictions of failure, the Anglo-American victory brought down not just the Iraqi regime, but also much

of the conventional wisdom about modern war. But even as U.S. and British forces occupied Basra, Tikrit, and Mosul, the Iraqi nation slipped into anarchy - and new military and security challenges emerged." "In this book, respected military analyst Anthony Cordesman provides the first in-depth examination of the key issues swirling around the most significant U.S. war since

Vietnam. Finding answers is essential if we are to understand the United States' awesome power and its place in a new age of international terror and regional conflict. Finding answers is also essential if we are to draw the proper lessons and understand the new challenges of conflict termination, peacemaking, and nation building."--
BOOK JACKET.

Strategy, Tactics, and Military Lessons
Provides an analysis of the military actions taken by the forces of the United States and its coalition allies during the Iraq War.
