 Now expanded and updated: Californians' favorite reference book to trees in our everyday lives "Anyone who is curious about trees is sure to find education and inspiration in these pages."--David Allen Sibley, author of *The Sibley Guide to Trees* and *The Sibley Guide to Birds* For more than ten years, *A Californian's Guide to the Trees among Us* has taught Californians the what, why, and how of trees in our cities and towns. This edition has been updated by the author to reflect new trends in urban forestry, with a revised introduction, updated taxonomy and nomenclature, and more than ten additional species featured. Matt Ritter introduces us to over 160 of California's most commonly grown urban trees in this expanded edition of his best-selling book. Used as a field guide or read with pleasure for the liveliness of the prose, this book will allow readers to learn the stories behind the trees that shade our parks, grace our yards, and line our streets. *Ornamental Trees* Heyday Books  
 Of all our childhood memories, few are quite as thrilling, or as tactile, as those of climbing trees. Scampering up the rough trunk, spying on the world from the cool green shelter of the canopy, lying on a limb and looking up through the leaves at the summer sun almost made it seem as if we were made for trees, and trees for us. Even in adulthood, trees retain their power, from the refreshing way their waves of green break the monotony of a cityscape to the way their autumn transformations take our breath away. In this lavishly illustrated volume, the trees that have enriched our lives finally get their full due, through a focus on the humble leaves that serve, in a sense, as their public face. *The Book of Leaves* offers a visually stunning and scientifically engaging guide to six hundred of the most impressive and beautiful leaves from around the world. Each leaf is reproduced here at its actual size, in full color, and is accompanied by an explanation of the range, distribution, abundance, and habitat of the tree on which it's found. Brief scientific and historical accounts of each tree and related species include fun-filled facts and anecdotes that broaden its portrait. The Henry's Maple, for instance, found in China and named for an Irish doctor who collected leaves there, bears little initial resemblance to the statuesque maples of North America, from its diminutive stature to its unusual trifoliolate leaves. Or the Mediterranean Olive, which has been known to live for more than 1,500 years and whose short, narrow leaves only fall after two or three years,

pushed out in stages by the emergence of younger leaves. From the familiar friends of our backyards to the giants of deep woods, *The Book of Leaves* brings the forest to life—and to our living rooms—as never before.

*The Illustrated Encyclopedia of Trees* Knopf  
 In this companion volume to the bestselling *The Midwestern Native Garden: Native Alternatives to Nonnative Flowers and Plants*, Charlotte Adelman and Bernard L. Schwartz offer another indispensable guide to replacing nonnative plants with native alternatives. This time, their subject is the native woody species that are the backbone of our gardens and landscapes. Among other ecological benefits, native shrubs and trees provide birds and butterflies with vital food and reproductive sites that nonnative species cannot offer. And they tend to be hardier and easier to maintain. The authors provide a comprehensive selection of native woody alternatives that, season by season, provide effects similar to those of nonnative shrubs and trees used for ornamental purposes and shade. These plants are suitable for all garden styles, provide blooms and fall color, and have the same cultivation requirements as their nonnative counterparts. Nature notes alert readers to the native species' unique ecological roles. Unlike other gardening guides, *Midwestern Native Shrubs and Trees* goes beyond mere suggestion to provide gardeners with the tools they need to make informed, thoughtful choices. Knowing which native species to plant for desired effects empowers landscapers and gardeners to take on a greater role in protecting our midwestern environment.
