*My Home in the Rainforest* Rainforest Medicinal Plant Organizational leaders have always known that culture drives performance and innovation. But developing practical, measurable strategies and tactics to actually "do" culture has historically been an elusive and mysterious project. Can you describe, measure, quantify and manage culture? "The Rainforest Scorecard: A Practical Framework for Growing Innovation Potential" is the answer to that question and the answer is "yes." In a concise 40 pages, The Rainforest Scorecard provides a

systematic, comprehensive, detailed strategy for assessing and quantifying all elements of an organizational culture with respect to its capacity for innovation. The framework serves as a tactical scaffolding upon which innovation culture can be built at scale, in any organization, public or private. Drawing on the groundbreaking work of Victor Hwang and Greg Horowitz in "The Rainforest: The Secret to Building the Next Silicon Valley," "The Rainforest Scorecard" helps organizational leaders structure a deep-dive internal quantification of the critical elements of innovation: Leadership; Frameworks, Infrastructure and Policies; Organizational

Resources; Activities and Engagement; Role Models; and Culture. The book guides the user/reader through a detailed question and answer process, which in turn creates both an innovation profile and a clear, direct process for building innovation into an organization. Anyone who is interested in understanding both the theory and practice of innovation and performance cultures will find this book compelling. It is grounded in the science of innovation, but it focuses on the implementation of innovation. It is the toolbox for those who wish to craft innovation.

What makes places like Silicon Valley tick? Can

we replicate that magic in other places?

Discover the answers in this groundbreaking book from two of the world's leading experts at the intersection of venture capital and global development.

Victor W. Hwang and Greg Horowitz propose a radical new theory to explain the nature of innovation ecosystems: human networks that generate extraordinary creativity and output. They argue that free market thinking fails to consider the impact of human nature on the innovation process.

This ambitious work challenges the basic assumptions that economists have held for over a century. The authors argue that innovation ecosystems - what they call Rainforests - can only thrive when certain

cultural behaviors unlock human potential. Their theory of the Rainforest is influenced by several breakthrough ideas in academia, including insights on sociobiology from Harvard, economic transactions from the University of Chicago, and design theory from Stanford. With an unorthodox and entertaining narrative, the book reveals the mysterious mechanisms of Rainforests. Furthermore, the authors provide practical tools for readers to design, build, and sustain new innovation communities. The Rainforest will transform the way you think about technology, business, and leadership.

Arbordale Publishing  
"Perhaps the finest and most profound account of ethnographic fieldwork and discovery that has ever entered the anthropological literature." —The Wall Street Journal "If you

want to experience a profoundly different culture without the exhausting travel (to say nothing of the cost), this is an excellent choice.”

—The Washington Post  
As a young anthropologist, Don Kulick went to the tiny village of Gapun in New Guinea to document the death of the native language, Tayap. He arrived knowing that you can't study a language without understanding the daily lives of the people who speak it: how they talk to their children, how they argue, how they gossip, how they joke. Over the course of thirty years, he returned again and again to document Tayap before it disappeared entirely, and he found himself

inexorably drawn into their world, and implicated in their destiny. Kulick wanted to tell the story of Gapuners—one that went beyond the particulars and uses of their language—that took full stock of their vanishing culture. This book takes us inside the village as he came to know it, revealing what it is like to live in a difficult-to-get-to village of two hundred people, carved out like a cleft in the middle of a tropical rainforest. But *A Death in the Rainforest* is also an illuminating look at the impact of Western culture on the farthest reaches of the globe and the story of why this anthropologist realized finally that he had to give up his study of this language and this village. An

engaging, deeply perceptive, and brilliant interrogation of what it means to study a culture, *A Death in the Rainforest* takes readers into a world that endures in the face of massive changes, one that is on the verge of disappearing forever.
