This paper presents results of a small survey of tractor owner-operators conducted in Kaduna and Nasarawa states in Nigeria. Following are the key findings from simple descriptive statistics: (1) owner-operators who buy tractors from the private market or from private individuals are more efficient than those who receive tractors through government programs, providing services to a greater area at lower costs, including during the off-peak season; (2) providing access to a wider range of tractor horsepower may improve efficiency over diverse soil types; (3) similar to some Asian countries in the 1980s, tractor operations are mostly concentrated in interviewees' local home districts, though a fraction form groups and serve in distant locations to earn greater revenues.

A History of the International Development of Massey-Ferguson Limited Haynes Manuals N.

America, Incorporated

The international or multi-national corporation has become an important phenomenon in today's business world and Massey-Ferguson is an ideal example of such an organization. Through its predecessor companies it can train its history to 1847, and so it has encountered virtually all the difficulties and developments of the last hundred years in business organization and management science. The development has not been straightforward for it has been much more than the growth of a single company in an expanding market. Management reorganization and the introduction of new management planning and control techniques contributed a good deal to the company's expansion, and because mergers played a vital role, the history of other companies is also involved. Dr. Neufeld's study concentrates on the years after the Second World War, a period in which the company's international operations became increasingly complex. He records the events that helped to shape the company's character and structure, and at the same time investigates the company's successes and failures in adjusting to a changing national and international business environment. His study reveals why Massey-Ferguson developed into a global corporation, an organization that considers the whole of the international environment when making decisions relating to the allocation of its marketing, purchasing, manufacturing and

engineering activities.

Industrially developing countries have the largest populations, the highest levels of poverty, poor health, and illiteracy, and the greatest need for improvement in working conditions. And as the marketplace and the workforce goes increasingly global, accountability with regard to the abuse of cheap labor in developing countries is becoming an issue. Presenting a global view of the state of

ergonomics in industrially developing countries (IDCs), *Ergonomics in Developing Regions: Needs and Applications* identifies problems, offers solutions, and explores costs and benefits. It defines the steps that can be taken to close the gap between working conditions in affluent and deprived nations. The book highlights the plight of millions of laborers and the poor working conditions pertaining to industrially less developed countries where the working environment mirrors the socio-economic deprivation of the people. Woven throughout the 34 chapters of this book is the tenet that good ergonomics is good economics. The chapters include examples of low-cost interventions at the work place in IDCs. The contributors discuss the ripple effect of ergonomics beyond the workplace to the betterment of life in general for the huge workforce in IDCs around the world. They focus on work-site problems and ergonomic solutions in developing regions around the globe, covering work conducted in Asia, Africa, South America, Russia, and China. Examining the factors unique to IDCs, leading ergonomists provide insights as to how sustainable progress is achievable in the developing world. They demonstrate the need for a more inclusive macro approach, citing managerial input essential for sustainable progress. With a panel of authors that reflects the multidisciplinary nature of the field, this book chronicles the nuances of differences in aim, practice, and outcome when ergonomists tackle Developing World problems from a Developing World perspective.

Australia has some of the world's largest and most labor-efficient farms, and tractors are an essential part of their operations. The average Australian farm has three or more tractors. In this historical overview, the author documents the development of the indigenous tractor industry, from the McDonald Imperial of 1909 to more recent cane, olive, and grape harvesters. *Australian Tractors* puts the industry in an economic and social history context.
