Endodontic Radiology, 2nd edition, is a unique reference that examines all aspects of radiographic imaging related to endodontics. Dr. Bettina Basrani and a team of prestigious international contributors build upon traditional radiographic techniques and include the latest information available on digital radiographs and cone beam computed tomography. More than an overview of equipment, the book delves into radiographic interpretation, differential diagnosis, technical difficulties and special circumstances when taking radiographs during the endodontic treatment, and how to choose the correct radiographic technique to obtain the desired images. Chapters explain general radiographic techniques; intraoral techniques; standard radiographs and interpretation; digital radiographs and their manipulation, storage, and interpretation; and CBCT principles, techniques, and clinical considerations.

The idea that plants have a mind of their own has been a prominent feature of some Indigenous narratives, literary works, and philosophical discourses. Recent scientific research in the field of plant cognition similarly highlights the capacity of botanical life to discern between options and learn from prior experiences or, in other words, to think. *The Mind of Plants* offers an accessible account of the idea of "the plant mind" by bringing together short essays and poems on plants and their interactions with humans. The texts interpret the theme broadly--from the ways that humans mind and unmind plants to the mindedness or unmindedness of plants themselves. Authors from the humanities, social sciences, and natural sciences have written about their personal connections to particular plants, reflecting upon their research on plant studies in a style amenable to a broad audience. Each of the authors has selected a plant that functions as a guiding thread to their interpretation of "the mind of plants." From the ubiquitous rose to the ugly hornwort, from the Amazonian ayahuasca to tobacco, the texts reflect the multifarious interactions between humans and flora. These personal narratives, filled with anecdotes, experiences, and musings, offer cutting-edge insights into the different meanings and dimensions of "the mind of plants." Contributors to *The Mind of Plants* are key figures in the fields of ethnobotany, ethnopharmacology, plant behavior

and cognition, and critical plant studies. Included are simple, thumbnail-style, black-and-white illustrations of the plants to enhance readers' appreciation of the narratives.

A research scientist's fascinating study of plant communication reveals how we "have been misunderstanding plants, and ourselves, for all of history" (The Paris Review). "A compelling story of discovery . . . [that] will change the way you see the world"—for fans of *The Hidden Life of Trees* (Robin Wall Kimmerer, author of *Braiding Sweetgrass*) In this "phytobiography"—a collection of stories written in partnership with a plant—research scientist Monica Gagliano shares genuine first-hand accounts from her research into plant communication and cognition. By transcending the view of plants as the objects of scientific materialism, Gagliano encourages us to rethink plants as people—beings with subjectivity, consciousness, and volition, and hence having the capacity for their own perspectives and voices. The book draws on up-close-and-personal encounters with the plants themselves, as well as plant shamans, indigenous elders, and mystics from around the world and integrates these experiences with an incredible research journey and the groundbreaking scientific discoveries that emerged from it. Gagliano has published numerous peer-reviewed scientific papers on how plants have a Pavlov-like response to stimuli and can learn, remember, and communicate to neighboring plants. She has pioneered the brand-new research field of plant bioacoustics, for the first time experimentally demonstrating that plants emit their own 'voices' and, moreover, detect and respond to the sounds of their environments. By demonstrating experimentally that learning is not the exclusive province of animals, Gagliano has re-ignited the discourse on plant subjectivity and ethical and legal standing. This is the story of how she made those discoveries and how the plants helped her along the way.
