The music for science fiction television programs, like music for science fiction films, is often highly distinctive, introducing cutting-edge electronic music and

soundscapes. There is a highly particular role for sound and music in science fiction, because it regularly has to expand the vistas and imagination of the shows and plays a crucial role in setting up the time and place. Notable for its adoption of electronic instruments and integration of music and effects, science fiction programs explore sonic capabilities offered through the

evolution of sound technology and design, which has allowed for the precise control and creation of unique and otherworldly sounds. This collection of essays analyzes the style and context of music and sound design in Science Fiction television. It provides a wide range of in-depth analyses of seminal live-action series such as Doctor Who, The Twilight Zone, and

Lost, as well as animated series, such as The Jetsons. With thirteen essays from prominent contributors in the field of music and screen media, this anthology will appeal to students of Music and Media, as well as fans of science fiction television.

Press From the cinema to the recording studio to public festival grounds, the range and sonic richness of Indian cultures can be heard across the subcontinent. Sound articulates communal difference and embodies specific identities for multiple publics. This diversity of sounds has been and continues to be crucial to the ideological construction of a unifying postcolonial

Indian nation-state. Indian Sound Cultures, Indian Sound Citizenship addresses the multifaceted roles sound plays in Indian cultures and media, and enacts a sonic turn in South Asian Studies by understanding sound in its own social and cultural contexts. "Scapes, Sites, and Circulations" considers the spatial and circulatory ways in which sound "happens" in and around Indian sound

cultures, including diasporic cultures. "Voice" emphasizes voices that embody a variety of struggles and ambiguities, particularly around gender and performance. Finally, "Cinema Sound" make specific arguments about film sound in the Indian context, from the earliest days of talkie technology to contemporary Hindi films and experimental art

installations. Integrating interdisciplinary scholarship at the nexus of sound studies and South Asian Studies by questions of nation/nationalism, postcolonialism, cinema, and popular culture in India, Indian Sound Cultures, Indian Sound Citizenship offers fresh and sophisticated approaches to the sonic world of the subcontinent. The Spectre of Sound Hal Leonard Corporation

This book is a major new study - dealing with notions of film music as a device that desires to control its audience, using a most powerful thing: emotion. The author emphasises the manipulative and ephemeral character of film music dealing not only with traditional orchestral film music, but also looks at film music's colonisation of television, and discusses pop

music in relation to films, and the historical dimensions to ability to possess audiences that have so many important cultural and aesthetic effects. It challenges the dominant but limited conception of film music as restricted to film by looking at its use in television and influence in the world of pop music and the traditional restriction of analysis to 'valued' film music, either from 'name' composers' or

from the 'golden era' of Classical Hollywood. Focusing on areas as diverse as horror, pop music in film, ethnic signposting, television drama and the soundtrack without a film- this is an original study which expands the range of writing on the subject.
