Insights from Classroom Research Routledge
This book presents empirical findings that reveal various teaching strategies and responses from two sub-cultural groups of students, i.e. local Hong Kong and Mainland students, with regard to their English studies. It puts forward a constructive model for innovative teaching strategies to enhance language attainment and classroom interaction in a multicultural learning environment in Hong Kong. It highlights inclusive teaching strategies with instructional, inspirational and interactional components to accommodate diverse learners and promote their classroom interaction. In addition to contributing to innovation in higher education in Hong Kong, the lessons learned here can be universally applied to ESL/EFL teaching and education reform around the world. Further, they support better learning and teaching at

universities in the context of internationalization. The book will above all benefit undergraduate students in ESL/EFL teacher training programs, and post-graduate research students in applied linguistics, language education and second language teacher education. It also offers a valuable reference book for university lectures in teacher education, researchers in higher education in China, and TESOL/TEFL instructors in English-speaking countries (the UK, USA, Canada, Australia, New Zealand etc.).

Contemporary society has witnessed radical changes in the field of communications in terms of how messages and meanings are disseminated.

Digitalization and the Internet have signalled an exponential rise in the circulation of multimodal texts in which different semiotic resources are orchestrated together to

construct meaning in all areas of social life, across languages and cultures, and in diverse specialized discourse domains. This has foregrounded the need to examine the semiotic functions, affordances, and issues at stake in a range of multimodal discourse forms, while simultaneously highlighting the importance of critical multimodal literacy in audiences and learners. This volume develops and extends pioneering research on the intersection between multimodality and specialized discourse. Eight newly commissioned studies offer innovative perspectives on multimodal research methodologies and applications in a variety of ESP (English for Specific Purposes) contexts for practitioners and scholars alike. The volume offers a glimpse at future directions in this dynamic and ever-evolving area of investigation focusing on the synergy between verbal and non-verbal modes of communication in the digital age. Each chapter explores an original area of application: academic, economic, scientific, marketing, legal, medical,

political, and tourism. The contributors approach multimodality from a range of theoretical and methodological viewpoints including synchronic and diachronic corpus-based and corpus-aided studies, critical discourse analysis, and systemic functional linguistics. Analytical tools such as multimodal (critical) discourse analysis, multimodal transcription, and multimodal annotation software capable of representing the interplay of different semiotic modes - speech, intonation, direction of gaze, facial expressions, gesturing, and spatial positioning of interlocutors - are employed. The diversity of research strands contained in the volume illustrates just some of the vast areas of multimodal knowledge dissemination that are still unmapped. As a cornerstone of communication, multimodality needs exploring in all its facets. These contributions aim to further that cause. *An Introduction to Psycholinguistics* BRILL In *Ten Lectures on Event Structure in a Network Theory of Language*, Nikolas Gisborne offers an account of verb meaning

from the perspective of a model that treats language structure as part of the wider cognitive network.

"The representation of events is a central topic for cognitive science. In this series of lectures, Jeffrey M. Zacks situates event representations and their role in language within a theory of perception and memory. Event representations

have a distinctive structure and format that result from computational and neural mechanisms operating during perception and language comprehension. A crucial aspect of the mechanisms is that event representations are updated to optimize their predictive utility. This updating has consequences for action control and for long-term memory. Event cognition changes across the adult lifespan and can be impaired by conditions including Alzheimer's disease. These mechanisms have broad impact on everyday activity, and have shaped the development of media such as cinema and narrative fiction"--

 Developing Notetaking Skills in a Second Language combines theoretical perspectives with an analysis of empirical classroom studies and offers a detailed discussion that increases pedagogical awareness of factors impacting second language (L2) notetaking performance and instruction. Based on original research and including descriptions of classroom practices and

samples of student work, the book provides insights on a range of topics relevant to L2 notetaking. The book emphasizes the challenges that many students from different international backgrounds face when taking notes in an L2 and outlines a five-stage pedagogic cycle for notetaking that can be applied to any listening text. It also explores the dialogic potential of notes for stimulating class discussion about notetaking strategies. This book will be of great interest for teachers, academics, scholars, and postgraduate students in the fields of applied linguistics, L2 and foreign language education. It will also be a useful resource for those in charge of teacher education and postgraduate TESOL, L1, and L2 listening researchers and psycholinguists.

 Learning About Language is an exciting and ambitious series of introductions to fundamental topics in language, linguistics and related areas. The books are designed for students of linguistics and those who are studying language as part of a

wider course. Cognitive Linguistics explores the idea that language reflects our experience of the world. It shows that our ability to use language is closely related to other cognitive abilities such as categorization, perception, memory and attention allocation. Concepts and mental images expressed and evoked by linguistic means are linked by conceptual metaphors and metonymies and merged into more comprehensive cognitive and cultural models, frames or scenarios. It is only against this background that human communication makes sense. After 25 years of intensive research, cognitive-linguistic thinking now holds a firm place both in the wider linguistic and the cognitive-science communities. An Introduction to Cognitive Linguistics carefully explains the central concepts of categoriza- tion, of prototype and gestalt perception, of basic level and conceptual hierarchies, of figure and ground, and of metaphor and metonymy, for which an innovative description is provided. It also brings together issues such as

iconicity, lexical change, grammaticalization and language teaching that have profited considerably from being put on a cognitive basis. The second edition of this popular introduction provides a comprehensive and accessible up-to-date overview of Cognitive Linguistics: Clarifies the basic notions supported by new evidence and examples for their application in language learning Discusses major recent developments in the field: the increasing attention paid to metonymies, Construction Grammar, Conceptual Blending and its role in online-processing. Explores links with neighbouring fields like Relevance Theory Uses many diagrams and illustrations to make the theoretical argument more tangible Includes extended exercises Provides substantial updated suggestions for further reading. Innovative Research Methods and Applications The Psycholinguistics of Bilingualism Provides a broad, introductory survey to psycholinguistics that will remain relevant to students whether they continue in the field or not Julie Sedivy's

Language in Mind, Second Edition provides an exceptionally accessible introduction to the challenging task of learning psycholinguistic research, theory, and application. Through a research-based approach, the text addresses important questions and approaches, reflecting a variety of theoretical orientations and viewpoints, provoking a sense of curiosity about language and the structures in the mind and brain that give rise to it, and emphasizing not just what psycholinguists know, but how they've come to know it. Ten Lectures on Cognitive Evolutionary Linguistics BRILL This is a book about the human mind and language. It will provide a brief overview of what psycholinguists of the late 1970s have learned about language behavior and its relation to mental events. Understanding Language Science BRILL Melissa Bowerman's lectures present a lucid detailed account of her research on how children build up a semantics for domains such as space in their first language, and the roles played by adult speech, typology, and cross-linguistic variation.

Enhancing Language Attainment and Classroom Interaction in a Multicultural Learning Environment BRILL Conceiving of language and cognition as biological phenomena, these lectures provide and illustrate a coherent, integrated theoretical framework for studying essentially any aspect of language systems, language use, language change, and language evolution. **9th International Conference, IHCI 2017, Evry, France, December 11-13, 2017, Proceedings** Harcourt College Pub This textbook offers a cutting edge introduction to psycholinguistics, exploring the cognitive processes underlying language acquisition and use. Ten Lectures on Corpus Linguistics with R BRILL
 An Introduction to Syntactic Analysis and Theory offers beginning students a comprehensive overview of and introduction to our current understanding of the rules and principles that govern the syntax of natural languages. Includes numerous pedagogical features such as 'practice' boxes and sidebars, designed to facilitate understanding of both the 'hows' and the 'whys' of sentence structure Guides readers through syntactic and

morphological structures in a progressive manner Takes the mystery out of one of the most crucial aspects of the workings of language – the principles and processes behind the structure of sentences Ideal for students with minimal knowledge of current syntactic research, it progresses in theoretical difficulty from basic ideas and theories to more complex and advanced, up to date concepts in syntactic theory

 Ten Lectures on Cognitive Sociolinguistics is a transcribed version of lectures given by Dirk Geeraerts in 2009 at Beihang University in Beijing. The lectures illustrate the 'social turn' in Cognitive Linguistics, as a combination of variationist linguistics and cognitive linguistic theory.
