Women's careers have been a topic of research and discussion in many disciplines including sociology, business, industrial, organisational and vocational psychology, and career guidance. Despite the introduction of equal employment legislation in many countries, women's patterns of career development continue to reflect structural labour market disadvantage. This unique book brings together expert contributions from academic researchers, as well as representing the voices of older women who participated in an international research investigation. Grounded in multidisciplinary empirical studies, the book provides:

- a variety of perspectives on women's careers in the 21st century
- an international exploration of the voice of the older woman
- an understanding of both the challenges and responses to women as they construct their careers.

Offering a comprehensive understanding of women's career development throughout the lifespan, this book will be of key interest to academics and researchers from the fields of education, psychology, management, geography, labour market economics and sociology, as well as career practitioners, managers, trainers, researchers and policy developers.

*Lifespan Development* Pearson College Division  
Balanced coverage of the entire life span is just one thing that distinguishes HUMAN DEVELOPMENT: A LIFE-SPAN VIEW, Seventh Edition. With its comprehensive, succinct, and applied coverage, the text has proven its ability to capture students' interest while introducing them to the issues, forces, and outcomes that make us who we are. Robert V. Kail's expertise in childhood and adolescence, combined with John C. Cavanaugh's extensive research in gerontology, result in a book with a rich description of all life-span stages and important topics. A modified chronological approach traces development in sequential order from conception through late life, while also dedicating

several chapters to key topical issues. This organization also allows the book to be relatively briefer than other texts, a benefit given the enormous amount of information covered in the course. The authors provide theoretical and empirical foundations that enable students to become educated, critical interpreters of developmental information. A blend of basic and applied research, as well as coverage of controversial topics and emergent trends, demonstrates connections between the laboratory and life. Comprised of papers written by members of the Social Science Research Council Subcommittee on Child Development in Life-Span Perspective, this book provides a representation of the current status of the relation between child development and the life-span. It suggests the possible synthesis of these two fields from both conceptual and empirical evidence. Theories and methods concerning the social, psychological, and anatomical influences on children's cognitive development through adolescence are highlighted.

Social Cognition brings together diverse and timely writings that highlight cutting-edge research and theories on the development of social cognition and social behavior across species

and the life span. The volume is organized according to two central themes that address issues of continuity and change both at the phylogenetic and the ontogenetic level. First, the book addresses to what extent social cognitive abilities and behaviors are shared across species, versus abilities and capacities that are uniquely human. Second, it covers to what extent social cognitive abilities and behaviors are continuous across periods of development within and across the life span, versus their change with age. This volume offers a fresh perspective on social cognition and behavior, and shows the value of bringing together different disciplines to illuminate our understanding of the origins, mechanisms, functions, and development of the many capacities that have evolved to facilitate and regulate a wide variety of behaviors fine-tuned to group living.

Executive Function: Development Across the Life Span presents perspectives from leading researchers and theorists

on the development of executive function from infancy to late adulthood and the factors that shape its growth and decline. Executive function is the set of higher-order cognitive processes involved in regulating attention, thoughts, and actions. Relative to other cognitive domains, its development is slow and decline begins early in late adulthood. As such, it is particularly sensitive to variations in environments and experiences, and there is growing evidence that it is susceptible to intervention – important because of its link to a wide range of important life outcomes. The volume is made up of four sections. It begins with an overview of executive function's typical development across the lifespan, providing a foundation for the remainder of the volume. The second section presents insights into mechanisms of executive function, as provided by a variety of methodological approaches. The third and fourth sections review the current research evidence on specific factors that shape executive function's development, focusing on normative (e.g., bilingualism,

physical activity, cognitive training) and clinically relevant (e.g., substance use, neurodegenerative disease) developmental pathways.

Although there has been a significant increase in studies of stress and coping processes in recent years, researchers have often approached these topics from rather narrow and constrained perspectives.

Furthermore, little communication has occurred across disciplines and research directions, resulting in the emergence of several relatively isolated literatures. An outgrowth of the Eleventh Biennial West Virginia University Conference on Life-Span Development, this volume emphasizes two major themes: the importance of taking a life-span approach to the study of stress and coping, and the development of new and more complete conceptual models of stress and coping processes. The first to approach these subjects from a life-span perspective, this book includes papers by distinguished researchers from each of the major periods of the life-span,

and brings together the cognitive and socioemotional traditions in the study of dealing with pressures. The editors hope that this facilitation of communication among researchers with diverse views will help create a broadening and integration of perspectives.

What are the changes we see over the life-span? How can we explain them? And how do we account for individual differences? This volume continues to examine these questions and to report advances in empirical research within life-span development increasing its interdisciplinary nature. The relationships between individual development, social context, and historical change are salient issues discussed in this volume, as are nonnormative and atypical events contributing to life-span change.

This book places career development into the mainstream of human development research and theory. The result is a powerful synthesis of vocational psychology and the most recent advances in lifespan developmental psychology, thus offering a developmental-contextual framework for guiding theory and research in career development. Its chapters demonstrate the utility of this framework for the study of women's career development, health and careers, career

intervention, and the selection and application of appropriate research methodologies. Scholars as well as intervention specialists should find this volume to be of great value. The adaptation of this developmental-contextual framework for career development theory, research, and intervention may represent an important future for vocational psychology and the study of career development.

This serial publication continues to review life-span research and theory in the behavioral and social sciences, particularly work done by psychologists and sociologists conducting programmatic research on current problems and refining theoretical positions. Each volume introduces excellent peer-reviewed empirical research into the field of life-span development while presenting interdisciplinary viewpoints on the topic. Often challenging accepted theories, this series is of great interest to developmental, personality, and social psychologists.

and Behavior Exploring Lifespan Development The final volume in this significant series, this publication mirrors the broad scientific attention given to ideas and issues associated with the life-span perspective: constancy and change in human development; opportunities for and constraints on plasticity in structure and function across life; the potential for intervention across the entire life course (and thus for the creation of an applied developmental science); individual differences (diversity) in life paths, in contexts (or the ecology) of human development, and in changing relations between people and contexts; interconnections and discontinuities across age levels and developmental periods; and the importance of integrating biological, psychological, social, cultural, and historical levels of organization in order to understand human development.

In the past fifty years, scholars of human development have been moving from studying change in humans within sharply defined periods, to seeing many more of these phenomenon as more profitably studied over time and in relation to other processes. The Handbook of Life-Span Development, Volume 1: Cognition, Biology, and Methods presents the study of human development conducted by the best scholars in the 21st century. Social workers, counselors and public health workers will receive coverage of of the biological and cognitive aspects of human change across the lifespan.
