 Molecules. Covalent bonds involve sharing electrons between
 atoms. When the atoms in the bond pull equally, the bonding
 electrons are shared equally, and the bond is nonpolar. When the
 atoms in the bond pull unequally, the bonding electrons are
 pulled closer to one atom, and the bond is polar. Chapter 8 -
 Covalent Bonding Chapter 8: Covalent Bonding. Matter takes
 many forms in nature: In this chapter, we are going to learn to
 distinguish the type of compound that we have already studied,
 the "ionic compound" (which contains oppositely-charged
 particles: metal cations and non-metal anions), from a different
 type of compound - a "molecular compound". Chapter 8: Covalent
