This primer is directed at experts and practitioners in intralogistics who are concerned with optimizing material flows. The presentation is comprehensive covering both, practical and theoretical aspects with a moderate degree of specialization, using clear and concise language. Areas of operation as well as technical standards of all relevant components and functions are described. Recent developments in technology and in the markets are taken into account. The goal of this book is to further stronger use of automated guided transport systems and the enhancement of their future performance.

McGraw-Hill Education

This book traces the evolution of theory of structures and strength of materials - the development of the geometrical thinking of the Renaissance to become the fundamental

engineering science discipline rooted in classical mechanics. Starting with the strength experiments of Leonardo da Vinci and Galileo, the author examines the emergence of individual structural analysis methods and their formation into theory of structures in the 19th century. For the first time, a book of this kind outlines the development from classical theory of structures to the structural mechanics and computational mechanics of the 20th century. In doing so, the author has managed to bring alive the differences between the players with respect to their engineering and scientific profiles and personalities, and to create an understanding for the social context. Brief insights into common methods of analysis, backed up by historical details, help the reader gain an understanding of the history of structural mechanics from the standpoint of modern engineering practice. A total of 175 brief biographies of important personalities in civil and structural engineering as well as structural mechanics plus an extensive bibliography

round off this work. *Continental Europe* MDPI

The Republic of Korea achieved a double revolution in the second half of the twentieth century. In just over three decades, South Korea transformed itself from an underdeveloped, agrarian country into an affluent, industrialized one. At the same time, democracy replaced a long series of military authoritarian regimes. These historic changes began under President Park Chung Hee, who seized power through a military coup in 1961 and ruled South Korea until his assassination on October 26, 1979. While the state's dominant role in South Korea's rapid industrialization is widely accepted, the degree to which Park was personally responsible for changing the national character remains hotly debated. This book examines the rationale and ideals behind Park's philosophy of national development in order to evaluate the

mechatronic drive solutions. This book describes in which way the industrial production and logistics work and shows the structure of the drive solutions required for this purpose. The functionality of the mechanical and electronic elements of a drive system is described, and their basic dimensioning principles are explained. The authors also outline the engineering, reliability, and important aspects of the life cycle. *Directory of Corporate Affiliations* Springer Science & Business Media This book is the translated English version of a text on industrial surveys, originally published in Slovak by SPEKTRUM STU Publishing. This updated version is not only a translation of the original, but also a reviewed, extended version, which reflects up-to-date international standards and regulations. The book covers topics in engineering surveying not available in other publications in this complex form, and addresses the design methodology, data processing and implementation of geodetic measurements under specific conditions to make industrial work

environments safer and more efficient. The book begins by introducing readers to these conditions, and then discusses design of maps, geodetic networks and information systems of industrial plants, the usage of cartesian and polar coordinate measuring systems, terrestrial laser scanning technology, as well as measurement of cranes, rotary kilns and special objects of nuclear power plants. The book will be of use to teachers, students, practitioners (e.g. surveyors), quality production managers, equipment designers and mechanical engineers.

Inhaltsangabe:Abstract: When investment businesses decide on pursuing a course of market penetration into CIS countries, there is unfortunately now prescribed way for them to follow. They have to plan and implement their entry into the international market according to criteria which they themselves have decided on. They have to ask themselves several questions. Why are we planning to invest in a foreign country? What are our motives and goals with regard to market penetration? In which country we will invest? Which countries should be penetrated first? When will this process begin? Which forms of market penetration should we chose? The main objective of this study is to identify success factors for market penetration with regard to

CIS countries. The model for investment businesses is used to define possible entry strategies into the CIS markets, and to analyse these theoretically and empirically. This paper looks closely at investment possibilities in Russia and in three of the CIS countries: the Ukraine, Moldavia and the Republic of Belarus. This study examines the experiences of 26 companies who have penetrated the markets in CIS countries.
