LINEAR PROGRAMMING 1.
 Introduction. A linear programming problem may be defined as the problem of maximizing or minimizing a linear function subject to linear constraints. The constraints may be equalities or inequalities. Here is a simple example. Find numbers x_1 and x_2 that maximize the sum $x_1 + x_2$ subject to the constraints $x_1 \geq 0$, $x_2 \geq 0$, $x_1 + 2x_2 \leq 10$, $2x_1 + x_2 \leq 10$.
