Product development nowadays is often carried out in parallel to, for example, shorten the development time. Working with product development in parallel implies a need for support methods that focus activities throughout the product life cycle. By focusing the assembly process in product design for automatic assembly. *Design For Automatic Assembly* - *Assembly Automation and Product Design* Places the consideration and application of automatic assembly in the context of the design for assembly method, addressing product design for both automated and manual assembly processes.

Assembly Automation and Product Design - BookAsk Solid assembly automation design and engineering ensures a superior product. Design and engineering are critical to the success of any automated manufacturing solution. When Proficient enters the assembly design process early, we are able to impact the final product significantly.

Automation Assembly Design Solutions | Proficient Jabil engineers have the unique blend of skills required to effectively design products for automatic assembly. They work closely with manufacturing and automation engineers to ensure that the end product is cost-effective and that all design and process challenges are addressed in a timely manner.

Design for assembly* is a process by which products are designed with ease of assembly in mind. If a product contains fewer parts it will take less time to assemble, thereby reducing assembly costs. In addition, if the parts are provided with features which make it easier to grasp, move, orient and insert them, this will also reduce assembly time and assembly costs. The reduction of the number of parts in an assembly has the added benefit of generally reducing the total cost of parts in the assembly.

Design for assembly - Wikipedia Although there are many ways to increase manufacturing productivity (utilizing improved materials, tools, processes, plant layout, etc.), consideration of manufacturing and assembly during product design holds the greatest potential for significant reduction in production costs and increased productivity.

Assembly Automation and Product Design - Taylor & Francis For either case, the design of the component must be a focus. There are a variety of factors that must be taken into consideration to ensure that a product design is optimized for automated assembly. However, it takes expertise to translate a product's design into one that can be output through automated assembly.
