Modern genetics

focuses on the chemical substance that genes are made of, called

deoxyribonucleic acid, or DNA, and the ways

in which it affects the chemical reactions that constitute the living

processes within the

cell. Gene action

depends on interaction with the environment.

Molecular genetics is a sub-discipline of

genetics, a field within the biological sciences.

Genes are units of heredity, instructions

for inherited traits such as hair color, blood type, and predisposition to some diseases. Molecular

genetics is concerned with the physical and chemical properties of these genes.
