“What would happen if Harry met Sally in the age of Tinder and Snapchat? . . . A field guide to Millennial dating in New York City” (New York Daily News). When New York-based graphic designers and long-time friends Timothy Goodman and Jessica Walsh found themselves single at the same time, they decided to try an experiment. The old adage says that it takes forty days to change a habit—could the same be said for love? So they agreed to date each other for forty days, record their experiences in questionnaires, photographs, videos, texts, and artworks, and post the material on a website they would create for this purpose. What began as a small experiment between two friends became an Internet sensation, drawing five million unique (and obsessed) visitors from around the globe to their site and their story. 40 Days of Dating: An Experiment is a beautifully designed, expanded look at the experiment and the results, including a great deal of material that never made it onto the site, such as who they were as friends and individuals before the forty days and who they have become since.

Battle-Pieces and Aspects of the War (1866) is the first book of poetry published by American author Herman Melville. The volume is dedicated "To the Memory of the Three Hundred Thousand Who in the War For the Maintenance of the Union Fell Devotedly Under the Flag of Their Country" and its 72 poems deal with the battles and personalities of the American Civil War and their aftermath. Critics at the time were at best respectful and often sharply critical of Melville's unorthodox style. The book had sold only 486 copies by 1868 and recovered barely half of its publications costs.[1] Not until the latter half of the twentieth century did *Battle-Pieces* become regarded as one of the most important group of poems on the American Civil War.

Conceived as a set of "Flexible Standards," this new addition to the Pamphlet Architecture series proposes a new way of thinking about roadways in cities. By reexamining the urban expressway as a political, physical, and mythic manifestation of American culture, this compelling pamphlet serves as a design manual for planners, a novel atlas for drivers, and a collection of proposals that reaffirm the role of architecture in urban planning. The thirteen projects take as their subject a site of contested transportation infrastructure -- the Sheridan Expressway. By proposing new typologies for this site, these studies seek to mediate the spaces in the city where local and regional meet. Referencing the introduction of the modern parkway into the Bronx, the grading of the Central Park transverse roads, and other works that have redefined the relationship between parks and roads, author Jonathan Solomon suggests a system by which large projects might again be built in American cities.
