The investment good market, together with the consumer good market, the money market and the labour market, are indeed the most extensively studied markets. The exhaustive survey of investment theory by Eisner and Strotz, already quoted four hundred references in 1963, although this work advocating for adjustment costs, was in fact only carried out at the very beginning of modern investment theory! This chapter gives an introduction of the extensive field and is an attempt to present some key ideas of investment theory. 1) We show that modern investment theory is the integration of many traditional approaches. The content of the chapter is set as follows. Section 2 presents an illustrative model of investment theory. Section 3, using this model, describes the investment decision of the firm. Sections 4 to 10 each present a "classical" investment hypothesis within the framework of the model. Section 11 concludes. For convenience, the key to the symbols used is given in Table 1. 2. The Model of the Firm Investment theory was born with the claim of Keynes (1936) that besides the capital demand (demand for a stock of capital at a point in time), an investment demand (demand for the increment of the capital stock in a period 1) Recent surveys are: Abel (1988), Coen and Eisner (1987) Artus and Muet (1984). The book on investment theory by Nickell (1978) is outstanding.

Economics has become a monolithic science, variously described as formalistic and autistic with neoclassical orthodoxy reigning supreme. So argue Dimitris Milonakis and Ben Fine in this new major work of critical recollection. The authors show how economics was once rich, diverse,

multidimensional and pluralistic, and unravel the processes that lead to orthodoxy's current predicament. The book details how political economy became economics through the desocialisation and the dehistoricisation of the dismal science, accompanied by the separation of economics from the other social sciences, especially economic history and sociology. It is argued that recent attempts from within economics to address the social and the historical have failed to acknowledge long standing debates amongst economists, historians and other social scientists. This has resulted in an impoverished historical and social content within mainstream economics. The book ranges over the shifting role of the historical and the social in economic theory, the shifting boundaries between the economic and the non-economic, all within a methodological context. Schools of thought and individuals, that have been neglected or marginalised, are treated in full, including classical political economy and Marx, the German and British historical schools, American institutionalism, Weber and Schumpeter and their programme of Socialökonomik, and the Austrian school. At the same time, developments within the mainstream tradition from marginalism through Marshall and Keynes to general equilibrium theory are also scrutinised, and the clashes between the various camps from the famous Methodenstreit to the fierce debates of the 1930s and beyond brought to the fore. The prime rationale underpinning this account drawn from the past is to put the case for political economy back on the agenda. This is done by treating economics as a social science once again, rather than as a positive science, as has been the inclination since the time of Jevons and Walras. It involves transcending the boundaries of the social sciences, but in a particular way that is in exactly the opposite direction now being taken by "economics imperialism". Drawing on the rich traditions of the past, the reintroduction and full incorporation of the social and the historical into the main corpus of political economy will be possible in the future.

International migration and urbanization as economic processes can provide great opportunities to solve local and regional economic and social problems and lead to the leveling of global economic unfairness and multi-complexity. However, uncontrolled migration and urbanization can easily destroy market stability and create many new social and economic problems both in developed (due to migration) and developing (due to urbanization) countries. Migration and Urbanization: Local Solutions for Global Economic Challenges is a collection of innovative research that sets basic rules and patterns for state regulation of urbanization and international migration and for increasing the economic efficiency of developed and developing countries. Additionally, the book evaluates the economic impact of urbanization and international migration at the global, national, and regional levels. While highlighting topics including economic security, modern mechanisms, and migration policy, this book is ideally designed for government officials, economists, educators, policymakers, industry leaders, business managers, academicians, researchers, and students.

This book addresses three important concepts in the economy—competition, innovation, and growth—using various cases and available data in Japan and other countries. First, the authors discuss competition, including global competition, to provide a better understanding of competition policy in Japan. Then, the authors examine the effects of human capital and alliance on innovation while providing new innovation indicators. Moreover, the authors examine growth from the perspective of corporate strategy such as acquisition, including international comparison. The interplay of competition, innovation, and growth has been prevalent in Japan, and it still acts as a catalyst for stimulating the stagnant economy. A better understanding of competition, innovation, and growth provides the tools to reinvigorate the stagnant economy in Japan and to reinforce the economy in other countries where the period of rapid growth has ended.

Leviticus is the Pentateuch's book of the law. Part 3 (of Volume 1) deals with separation. Volume 2 is devoted mostly to this theme. Chapter 11 deals with gleaning. Gleaning was part of the welfare system, and would be called workfare today. Owners of farms had to let the poor glean the leftovers after the first group of harvesters went through a field. This was hard work, and as such the program let farm owners identify hard workers. Chapter 12 deals with verbal binds. It forbade swearing by God's name. This was a boundary; it paralleled the third commandment. This law made men responsible for their promises. Chapter 13 is on protecting the weakest party in a transaction; it mandated payment at the end of the work day.

Chapter 14 is one of the most important chapters in the Bible: judicial impartiality (Lev. 19:15). The state is not to favor any economic group. Chapter 15 is on another aspect of Leviticus 19:15. It decentralized civil government. Chapter 16 is on the state's monopoly of vengeance. Chapter 17 deals with the preservation of the seed -- family name -- in Israel. The actual law forbade the mixing of breeds or mixing linen and wool. Chapter 18 deals with covenantal fruit: the requirement that fruit trees be allowed to grow until the fourth year before being picked. Chapter 19 is on honest weights and measures as the mark of honest business in general and honesty in a society. Chapter 20 is on inheritance by fire. It was illegal to pass infants through a supposedly sacred fire, exposing them to death. Chapter 21 is on inheritance through separation: clean breasts and unclean. Chapter 22 begins Part 4 of Leviticus: Covenantal Acts. It deals with mutual self-interest between the priests and the gleaners. ----- This series, An Economic Commentary on the Bible, is published by Reconstructionist Radio, a producer and provider of Reformed (Postmillennial, Presuppositional, Covenantal, Calvinist, and Theonomic) Christian Reconstructionist podcasts, audiobooks, lectures, sermons, music, and other media. It is impossible to ignore the connection between economic development and ecological sustainability—overwhelming scientific evidence points to anthropogenic pressures slowly destroying life on Earth. The need for corrective action is, therefore, critical. This edited compilation studies the processes that are causing irreversible changes in the Earth's systems. It dwells primarily on the change in the ecosystems that sustain human beings and examines the drivers, direction, and magnitude of global change. The book not only studies the methods that enhance the reader's understanding of the impact of global change but also discusses mitigation strategies. The emphasis is on sustainability in a framework of development, with special attention to equity.

Originally published in 1984, this study explores multiple theoretical perspectives as well as critically analysing the most recent evidence at the time to try and find a full explanation for inequality in the United States. Arguments of neoclassical economists and Marxist and institutional structuralists are considered by Osberg as well as putting forward his own model. Osberg uses his findings to attempt a complete explanation of the issue and advises on policies which could be undertaken by the government to try and lessen the gap. This title will be of interest to students of Economics.
