Functional Analysis Springer

This title presents background for the solution of non-linear equations in Banach spaces. It contains basic techniques in non-linear analysis and also touches upon today's research. The book deals with topics, such as measures on non-compactness, topological degree, and bifurcation theory.

Elements of Functional Analysis Springer
Nature

The book contains 13 articles, some of which are survey articles and others research papers. Written by eminent mathematicians, these articles were presented at the International Workshop on Complex Analysis and Its Applications held at Walchand College of Engineering, Sangli. All the contributing authors are actively engaged in research fields related to the topic of the book. The workshop offered a comprehensive exposition of the recent developments in geometric functions theory, planar harmonic mappings, entire and meromorphic functions and their applications, both theoretical and

computational. The recent developments in complex analysis and its applications play a crucial role in research in many disciplines.

Current Topics in Pure and Computational Complex Analysis

Springer Science & Business Media

This book is based on lectures given at "Mekhmat", the Department of Mechanics and Mathematics at Moscow State University, one of the top mathematical departments worldwide, with a rich tradition of teaching functional analysis. Featuring an advanced course on real and functional analysis, the book presents not only core material traditionally included in university courses of different levels, but also a survey of the most important results of a more subtle nature, which

cannot be considered basic but which are useful for applications. Further, it includes several hundred exercises of varying difficulty with tips and references. The book is intended for graduate and PhD students studying real and functional analysis as well as mathematicians and physicists whose research is related to functional analysis.
