WebSphere Application Server V8.5 Administration and Configuration Guide for the Full Profile
 Packt Publishing Ltd

In this IBM® Redpaper™ publication, you learn how to implement the IBM subcapacity licensing functions and the IBM License Metric Tool to track and manage licenses for your IBM WebSphere® Application Server instances. It also summarizes the different licensing models that IBM employs, the advantages of using software asset management for IT companies, and explains how to save money by using these the subcapacity model for WebSphere Application Server licenses. The primary purpose of the License Metric Tool is counting the processor value units (PVU) and resource value units (RVU) for subcapacity and full-capacity licensing models. It is a no-charge metric tool that many companies use as a regular software asset manager for IBM products. This Redpaper shares installation and configuration scenarios for installing the Endpoint Manager

server, the License Metric Tool server, and the IBM DB2® database on a single computer or in distributed computing infrastructures. It describes how the application server components are discovered by the License Metric Tool software, explains how to interpret the inventory reports, and provides technical details about the software detection techniques that the tool uses. You also learn about the software bundling process and how to manage the software inventory that is detected by using the Software Classification panel. You can then use the PVU Subcapacity Reports to analyze actual use of your licenses and produce the data for IBM license audits.

IBM WebSphere Application Server V8 Concepts, Planning, and Design Guide IBM Redbooks

This IBM® Redbooks® publication provides system administrators and developers with the knowledge to configure an IBM WebSphere® Application Server Version 8.5 runtime environment, to package and deploy applications, and to perform ongoing management of the WebSphere environment. As one in a series of IBM Redbooks publications and IBM Redpapers™ publications for V8.5, the entire series is designed to give you in-depth information about key WebSphere Application Server features. WebSphere Application Server V8.5 provides two runtime profiles.

Every WebSphere Application Server package includes both profile types. The runtime traditionally available with the WebSphere Application Server packages is referred to as the full profile. The application serving run time provided with this profile is composed of a wide spectrum of runtime components that are available when the server is started. The full profile provides support for Java Platform Enterprise Edition 6 (Java EE 6) and Enterprise OSGi technologies. The Liberty profile provides a simplified stand-alone run time for web applications, supporting a subset of the programming model available with the full profile. Any application that runs on the Liberty profile will also run on the full profile. In this book, we provide a detailed exploration of the WebSphere Application Server V8.5 runtime administration process for the full profile. This book includes configuration and administration information for WebSphere Application Server V8.5 and WebSphere Application Server Network Deployment V8.5 on distributed platforms and WebSphere Application Server for IBM z/OS® V8.5. This book has been updated with information about the new features in WebSphere Application Server V8.5.5. The Liberty profile administration and configuration information has been moved into a separate book. The following publications are prerequisites for this book: WebSphere Application Server: New Features in V8.5.5, REDP-4870

WebSphere Application Server V8.5.5 Technical Overview, REDP-4855 IBM WebSphere Application Server V8.5 Concepts, Planning, and Design Guide, SG24-8022 The following publications are companion books, covering the Liberty profile of WebSphere Application Server: WebSphere Application Server Liberty Profile Guide for Developers, SG24-8076 WebSphere Application Server V8.5 Administration Guide for the Liberty Profile, SG24-8170.

[Reduce Costs and Speed Your Digital Transformation with IBM WebSphere Application Server on Cloud](#) IBM Redbooks

This IBM® Redbooks® publication provides system administrators and developers with the knowledge to configure a WebSphere® Application Server V7 runtime environment, to package and deploy applications, and to perform ongoing management of the WebSphere environment. As one in a series of IBM Redbooks publications and Redpapers™ publications for V7, the entire series is designed to give you in-depth information about key WebSphere Application Server features. In this book, we provide a detailed exploration of the WebSphere Application Server V7 runtime administration process. The book includes configuration and administration information for WebSphere Application Server V7 and WebSphere Application Server Network Deployment V7 on distributed platforms and WebSphere Application Server for z/OS® V7. The following publications are considered prerequisites to this book: - WebSphere Application Server V7.0: Technical Overview, REDP-4482 - WebSphere Application Server V7: Concepts, Planning and Design, SG24-7708

Step by Step Mc PressLlc

This IBM® Redbooks® publication introduces a technical overview of the main new features, functions and enhancements available in IBM i 6.1 (formerly called i5/OS® V6R1). It gives a summary and brief explanation of new capabilities and what has changed in the operating system, and also discusses many of the licensed programs and application development tools associated with IBM i. Many other new and enhanced functions are described, such as virtualization of storage, security, Java™ performance, improved performance with IBM System Storage™ devices, backup and recovery, including base IBM i, Backup, Recovery and Media Services (BRMS). The book introduces the PowerHATM product, IBM Systems Director-based system management and an easier Web enablement. The information provided in this book will be useful for customers, Business Partners, and IBM service professionals involved with planning, supporting, upgrading, and implementing IBM i 6.1 solutions.

[Simplify Software Audits and Cut Costs by Using the IBM License Metric Tool](#) IBM Redbooks

This IBM® Redbooks® publication describes how to build production topologies for Business Process Management (BPM) solutions. It is aimed at IT Architects and IT Specialists who want to understand and implement these topologies. Use this book to select the appropriate production topologies for a given environment, then follow the step-by-step instructions included in this book to build these topologies. You must have a high-level understanding of WebSphere Business Process Management products to get the most out of this book. This book addresses the following WebSphere® products: WebSphere Process Server V7 WebSphere Business Monitor V7 WebSphere Business Services Fabric V7 WebSphere Enterprise Service Bus V7 WebSphere Business Compass V7 Part 1, "Overview" on page 1, introduces the BPM products that we discuss and provides an overview of basic topology terminology. This part also provides an overview of the production topologies that we describe in this book, including a selection criteria for when to select each topology. Part 2, "Building production topologies" on page 53, provides a series of step-by-step instructions for creating production topology environments using deployment environment patterns. We describe topologies using the Integrated Solutions Console and a command-line interface.

[IBM Websphere Application Server V7.0 Security Apress](#)

This IBM® Redbooks® publication helps you plan and execute the migration of J2EE applications developed for Oracle WebLogic Server, JBoss, GlassFish, and Apache Tomcat, so that they run on WebSphere® Application Server V7. This book provides detailed information to plan migrations, suggested approaches for developing portable applications, and migration working examples for each of the platforms from which we migrated. It is not our intention to provide a feature-by-feature comparison of these application servers versus WebSphere Application Server V7, or to argue the relative merits of the products, but to produce practical technical advice for developers who have to migrate applications from these vendors to WebSphere Application Server V7. The book is intended as a migration guide for IT specialists who are working on migrating applications written for other application servers to WebSphere Application Server V7.

[IBM Certified System Administrator WebSphere Application Server Network Deployment V8.5.5 and Liberty Profile Exam Practice Questions and Dumps](#) IBM Redbooks

The Temenos T24 core banking application is a critical application for the banks that use it and has a primary focus on providing an appropriate level of high availability and disaster recovery. The level of availability is determined largely by the configuration of the infrastructure that supports T24. This infrastructure is built on hardware, middleware, and networking, in addition to the operational procedures and practices that are used to operate T24. Many options are available for meeting a client's high availability and disaster recovery requirements. The solution chosen by a Temenos T24 user depends on many factors. These factors include a user's detailed availability and recovery requirements; their existing datacenter standards, practices, and processes; and the available network infrastructure. Therefore, the optimum solution must be determined on a case-by-case basis for each deployment. This IBM® Redpaper™ publication serves as a guide to help IT architects and other technical staff who are designing, configuring, and building the infrastructure to support Temenos T24. It shows how IBM software can deliver high availability and disaster recovery for Temenos T24 to meet a client's requirements. This software might run on IBM AIX®, IBM WebSphere® Application Server, WebSphere MQ Server, and IBM DB2®. These IBM software components are typically used for a Temenos T24 deployment on an IBM middleware stack to ensure a highly available infrastructure for T24.

[WebSphere Application Server](#) IBM Redbooks

This IBM® Redpaper Redbooks® publication introduces the IBM System z® New Application License Charges (zNALC) pricing structure and provides examples of zNALC workload scenarios. It describes the products that can be run on a zNALC logical partition (LPAR), reasons to consider such an implementation, and covers the following topics: Using the IBM WebSphere Application Server Liberty profile to host applications within an IBM CICS® environment and how it interacts with CICS applications and resources Security technologies available to applications that are hosted within a WebSphere Application Server Liberty profile in CICS How to implement modern presentation in CICS with a CICS Liberty Java virtual machine (JVM) server How to share scenarios to develop Liberty JVM applications to gain benefits from IBM CICS Transaction Server for IBM z/OS® Value Unit Edition Considerations when using mobile devices to interact with CICS applications and explains specific CICS technologies for connecting mobile devices by using the z/OS Value Unit Edition How IBM Operational Decision Manager for z/OS runs in the transaction server to provide decision management services for CICS COBOL and PL/I applications Installing the CICS Transaction Server for z/OS (CICS TS) Feature Pack for Modern Batch to enable the IBM WebSphere® batch environment to schedule and manage batch applications in CICS This book also covers what is commonly referred to as plain old Java objects (POJOs). The Java virtual machine (JVM) server is a full-fledged JVM that includes support for Open Service Gateway initiative (OSGi) bundles. It can be used to host open source Java frameworks and does just about anything you want to do with Java on the mainframe. POJO applications can also qualify for deployment using the Value Unit Edition. Read about how to configure and deploy them in this companion Redbooks publication: IBM CICS and the JVM server: Developing and Deploying Java Applications, SG24-8038 Examples of POJOs are terminal-initiated transactions, CICS web support, web services, requests received via IP CICS sockets, and messages coming in via IBM WebSphere MQ messaging software.

Deployment and Advanced Configuration IBM Press

For IBM WebSphere users, this is the complete guide to securing your applications with Java EE and JAAS security standards. From a far-ranging overview to the fundamentals of data encryption, all the essentials are here. Overview Discover the salient and new security features offered by WebSphere Application Server version 7.0 to create secure installations Explore and learn how to secure Application Servers, Java Applications, and EJB Applications along with setting up user authentication and authorization With the help of extensive hands-on exercises and mini-projects, explore the various aspects needed to produce secure IBM WebSphere Application Server Network Deployment v7.0 infrastructures.

Secure Your WebSphere Applications with Java EE and JAAS Security Standards IBM Redbooks

IBM® WebSphere® Application Server V8.5 includes a Liberty profile, which is a highly composable, dynamic application server profile. It is designed for two specific use cases: Developers with a smaller production runtime, and production environments. For developers, it focuses on the tasks that a developer does most frequently, and makes it possible for the

developer to complete those tasks as quickly and as simply as possible. For production environments, it provides a dynamic, small footprint runtime to be able to maximize system resources. This IBM Redbooks® publication targets administrators of Liberty environments. It provides the information needed to create, configure, and manage Liberty servers. It includes information about managing multiple servers in an installation, including the use of the new administrative capabilities introduced in WebSphere Application Server V8.5.5.7. The following publications are companion publications for this book: WebSphere Application Server: New Features in V8.5.5, REDP-4870 WebSphere Application Server V8.5.5 Technical Overview, REDP-4855 IBM WebSphere Application Server V8.5 Concepts, Planning, and Design Guide, SG24-8022 WebSphere Application Server Liberty Profile Guide for Developers, SG24-8076 **J2EE Deployment and Administration** IBM Redbooks

This IBM® Redpaper™ publication covers the detailed step-by-step installation of IBM Tivoli® Access Manager for Enterprise Single Sign-On 8.1 onto a single-server and a clustered environment. This paper supplements the IBM Tivoli Access Manager for Enterprise Single Sign-On 8.1 Installation Guide and IBM Tivoli Access Manager for Enterprise Single Sign-On 8.1 Setup Guide. Do not use this document in isolation. Check the relevant guides in the Tivoli Access Manager for Enterprise Single Sign-On Information Center as you perform the install. There might be various reasons to install Tivoli Access Manager for Enterprise Single Sign-On into either a single server or a clustered environment. A small-scale deployment, a typical proof of technology, or a proof of concept might be the best examples for a single server installation, whereas larger scale deployments or requirements for high availability and scalability might be reasons to deploy in a clustered environment. This IBM Redpaper is targeted towards administrators and engineers who are facing a Tivoli Access Manager for Enterprise Single Sign-On deployment on either a single IBM WebSphere Application Server or a clustered IBM WebSphere Application Server Network Deployment configuration.

At OAZ Institute, we provide a comprehensive suite of practice exams any certification you'll imagine. Whether it's CompTIA or Cisco you can guarantee we provide an expert, accurate, and relevant practice exam. Our offerings are updated regularly with exam preps for certifications from Microsoft, IBM, Adobe, PMI, Apics, Citrix, VMWare, HP and lesser known vendors like API and so on, much more. As we frequently say at OAZ Institute, work smarter not harder. You are close to see a study guide that took hours of hard collection work, expert preparation, and constant feedback. That's why we know this exam prep will assist you get that high-score on your journey to certification. Perhaps this is often your initiative toward the certification, or perhaps you're returning for an additional round. We hope that you simply feel this exam challenges you, teaches you, and prepares you to pass the C950 - 418 or as it's also known, the WEBSPPHERE APPLICATION SERVER NETWORK DEPLOYMENT V9 CORE ADMINISTRATION.

[DB2 for z/OS and WebSphere Integration for Enterprise Java Applications](#) Vervante

This IBM® Redbooks® publication provides information about the concepts, planning, and design of IBM WebSphere® Application Server V8 environments. The target audience of this book is IT architects and consultants who want more information about the planning and designing of application-serving environments, from small to large, and complex implementations. This book addresses the packaging and features in WebSphere Application Server V8 and highlights the most common implementation topologies. It provides information about planning for specific tasks and components that conform to the WebSphere Application Server environment. Also in this book are planning guidelines for WebSphere Application Server V8 and WebSphere Application Server Network Deployment V8 on distributed platforms and for WebSphere Application Server for z/OS® V8. This book contains information about migration considerations when moving from previous releases.

[DataPower SOA Appliance Administration, Deployment, and Best Practices](#) IBM Press

IBM WebSphere Application Server Interview Questions You'll Most Likely Be Asked is a perfect companion to stand ahead above the rest in today's competitive job market.

[WebSphere Application Server V8.5 Concepts, Planning, and Design Guide](#) IBM Redbooks

This IBM® Redbooks® publication focuses on operational and managerial aspects for DataPower® appliance deployments. DataPower appliances provide functionality that crosses both functional and organizational boundaries, which introduces unique management and operational challenges. For example, a DataPower appliance can provide network functionality, such as load balancing, and at the same time, provide enterprise service bus (ESB) capabilities, such as transformation

and intelligent content-based routing. This IBM Redbooks publication provides guidance at both a general and technical level for individuals who are responsible for planning, installation, development, and deployment. It is not intended to be a "how-to" guide, but rather to help educate you about the various options and methodologies that apply to DataPower appliances. In addition, many chapters provide a list of suggestions.

A complete reference to the complex and multifaceted middleware that is WebSphere Application

Server—used by huge enterprises as well as small businesses—this guide covers not only installation and configuration but the critical verification and management process for ensuring successful installation and implementation. All of the different packages, from Express to Network, are addressed so that companies of all sizes will be able to successfully implement WebSphere Application Server V6. The steps involved in setting up a complete WebSphere Application Server installation are provided, and the configuration process for a highly available, workload-managed (HA/WLM), clustered environment built using the WebSphere V6 Network Deployment package is demonstrated. Also discussed are dynamic caching, security, Web service enablement, the Application Server Tool (AST) kit, and WebSphere Rapid Deployment (WRD).
