#### **The TCP/IP Guide** Cisco Press

This is an excellent tutorial for anyone wanting to pass the Microsoft, A+, or Cisco TCP/IP exam. It covers IPv4 subnetting in depth, such as how to construct the IPv4 subnet tables from the ground up. Additional chapter includes the new IPv6 standard. "Hi Everyone, I took my TCP/IP today with score of 948/1000, your exam preparation is excellent and good value for money. What I like about your test is the layout, dividing test into different topics, that way it is easy to spot your weak areas. I would recommend anyone out there to check your Test Prep before taking any Microsoft Exams." —Abdi Elmi "I had just appeared for the TCP/IP exam, and it was quite tough. Your questions proved to be very useful additional source besides my Sybex guide. My score, 879, though I expected in 900s." —Steven Chiu, Calcutta, India "Passed the Microsoft TCP/IP in the mid-nineties! Glad I had your tool." —Robert Vettor, U.S.A. "...As for TCP/IP, I made 965 which means I missed 2 out of 58. I was positive that two of the questions had no correct answers... As for your tutorial, it is the 'bomb'. I don't know if you know that term means where you live, but my 15 year old daughter uses it to refer to something that is excellent. I was totally prepared and did not see anything that the tutorial did not cover in detail. Keep up the good work!" —Jim Newton, U.S.A. "Thanks for your tutorial. You helped me pass TCP/IP and other MS Exams. Just wanted to say thanks, big time!! Thank you for your assistance in this matter." —John Devereaux, HP Computers

CEH can be said as a certified ethical hacker. This certification is a professional certificate and it is awarded by the EC council (international council of E-commerce consultant). An ethical hacker is a name that is given to penetration testing/ tester. An ethical hacker is employed by the organization with full trust with the employer (ethical hacker) for attempting the penetrating the computer system in order to find and fix all the computer security vulnerabilities. Computer security vulnerabilities also include illegal hacking (gaining authorization to some other computer systems). These activities are criminal activities in almost all countries. Doing a penetrating test in a particular system with the permission of the owner is done and also possible except in Germany. This certification validates the knowledge and skills that are required on how to look for the vulnerabilities as well as weaknesses in a particular computer.
