*Managing Cancer and
Living Meaningfully*
Oxford University Press
Meaning-Centered
Psychotherapy (MCP) for
advanced cancer patients
is a highly effective
intervention for advanced
cancer patients,
developed and tested in
randomized controlled
trials by Breitbart and
colleagues at Memorial
Sloan-Kettering Cancer
Center. This treatment
manual for group therapy
provides clinicians in the
oncology and palliative
care settings a highly
effective, brief, structured
intervention shown to be
effective in helping
patients sustain meaning,
hope and quality of life.

Dignity Therapy OUP
Oxford

The development of this
inaugural Handbook of
Oncology Social Work:
Psychosocial Care for
People With Cancer
provides a repository of
the scope of oncology
social workers' clinical
practice, education,
research, policy and
program leadership in the
psychosocial care of
people with cancer and

their families. It focuses
on the unique synergy of
social work perspectives,
values, knowledge, and
skills with the
psychosocial needs of
cancer patients, their
families, and the health
care systems in which
they are treated. It
addresses both the
science and art of
psychosocial care and
identifies the increasing
specialization of oncology
social work related to its
unique knowledge base,
skills, role, and the
progressive complexity of
psychosocial challenges
for patients with cancer.
This Handbook equips the
reader with all that we
know today in oncology
social work about patient
and family centered care,
distress screening,
genetics, survivorship,
care coordination,
sociocultural and
economic diversity, legal
and ethical matters,
clinical work with adults
living with cancer, cancer
across the lifespan, their
caregivers and families,
pediatrics, loss and grief,
professional career
development, leadership,
and innovation. Our hope
is that in reading this
Handbook you will identify
new areas where each of
you can leave your mark

as innovators and change
agents in our evolving
field of practice.

**Counseling Women
with Breast Cancer** John
Wiley & Sons

Outlining the unique
psychosocial and
development issues faced
by young adults affected
by cancer, this text draws
on qualitative data from
two pilot studies
conducted in the US to
illustrate how the needs
of this often overlooked
population can be
effectively met via group
therapy in clinical
settings. Drawing on 25
years of experience as a
licensed clinical social
worker supporting
pediatric and young adult
cancer patients and their
families, Kurker focuses
on the role of the clinician
in structuring support
group sessions. Chapters
draw on patient
perspectives to
demonstrate effective
application of
interventions to help
adolescents work through
trauma associated with a
diagnosis of cancer,
treatment, recovery, and
the impacts on their
development. Outcomes
from these studies also
include strategies for
selecting support group
participants, structuring

group activities, and securing funding. *Effective Group Therapies for Young Adults Affected by Cancer* will be a valuable text for oncology social workers and clinicians involved in adolescent support services. In addition, researchers and postgraduate students with an interest in the fields of social work, psychology, and adolescent development will find the book of interest.

Apos Clinical Reference Handbo

Now fully revised and in its fourth edition, the *Oxford Handbook of Oncology* has been the essential go-to guide for students and practitioners in oncology for over a decade. The scientific basis and diagnosis of cancers is covered, as well as drugs, biomarkers, and the presentation and psychosocial aspects of oncology. Concise, practical, and comprehensive, there is no better companion for both common conditions and challenging emergencies. The field of oncology has surged forward since the last edition was published and the *Oxford Handbook of Oncology* has been fully revised and updated to

reflect these recent advances so you can be sure that the vital information you need is in your hands. This handbook incorporates changes such as the understanding of the science of cancer, novel therapies in breast, lung, renal, and melanoma, molecular sub-classification of common solid cancers, personalized therapy approaches, new agents in hard to treat cancers, the benefits of new technologies in radiotherapy, and the emerging data on the importance of the immune response. Written by experts in the field to ensure that it is grounded in real life clinical practice, this handbook provides a concise guide to all aspects of oncology for all students, nurses, and junior faculty responsible for the care of cancer patients, while also providing further reading and highlighting areas of controversy for those who need a more detailed understanding.

Group Therapy For Cancer Patients: A Research-based Handbook Of Psychosocial Care SAGE
The Handbook of Counseling Women addresses current

theories, research, and issues relevant to the mental and physical well-being of women. Edited by Mary Kopala and Merle A. Keitel, this comprehensive volume is divided into three parts. Part One focuses on theoretical, sociocultural, biological, and developmental considerations. Part Two is devoted to assessment, diagnosis, and intervention. Part Three covers supervision, research, and ethics. Most chapters include case studies, recommendations for further reading, and resources for clients. Essential reading for psychologists, social workers, counselors, and psychiatric nurses, this handbook will also appeal to graduate and undergraduate students in counseling, clinical psychology, and clinical social work courses.

Cancer Care for the Whole Patient CRC Press
This comprehensive text provides clinicians with practical and evidence-based guidelines to achieve effective, patient-centered communication in the areas of cancer and palliative care. Written by an outstanding panel of international experts, it integrates empirical findings with clinical

wisdom, draws on historical approaches and presents a state-of-the-art curriculum for applied communication skills training for the specialist oncologist, surgeon, nurse and other multidisciplinary team members involved in cancer care today. In this book communication is broken down into key modules that cover the life-cycle of cancer care. They include coverage of diagnosis and treatment including clinical trials, empathic support in response to distress, transition to survivorship or palliative therapies, discussion of prognosis, conduct of family meetings, and care of the dying. Complementary training of patients in their communication with the doctor completes the interactive dyad. The art of teaching, impact of gender and power in the consultation and the ethical context are carefully considered. Special communication challenges include discussion of genetic risk, rehabilitative and salvage surgery, promotion of treatment adherence, unanticipated adverse outcomes, intercultural issues, fertility and sexuality. The value of decision aides, question

prompt lists, audio-recording of consultations and use of the internet is illustrated. By looking across the full spectrum of disciplines involved in the multidisciplinary team, discipline-specific issues are considered by experts in each field. In this manner, the needs of patients and their relatives are evaluated, including paediatric and geriatric populations. To achieve all of this, theoretical models are examined from the medical school to the highly specialized practice, facilitation training and actor training are made explicit, and international approaches to communication skills training are compared and contrasted. Finally, research tools that assist in coding cancer consultations, evaluating training courses, and employing mixed methods in studies aid the reader in providing clear and sensitive communication when handling challenging situations whilst treating cancer sufferers and palliative care patients. [Oxford Guide to CBT for People with Cancer](#) Penguin
This comprehensive guide for mental health practitioners and medical

professionals addresses the delicate issues surrounding breast cancer and the processes involved in emotional coping and healing. Unlike other works, this volume takes a practice-oriented approach, offering readers a review of the medical, psychological and social aspects of breast cancer. Using case studies that depict women from diverse backgrounds, this text focuses on current research, interventions, psychological assessment, and addresses the concerns of women. Students and practitioners alike will appreciate this engagingly written and informative book. *Geriatric Psycho-Oncology* SAGE Publications
Handbook of Psychotherapy in Cancer Care John Wiley & Sons
Handbook of Counseling Women Oxford University Press
This new book by international experts in psycho-oncology has arisen from the teaching academies offered by the International Psycho-oncology Society. It distills the wisdom and experience from the training manuals dedicated to individual psychological therapies and combines them into an accessible handbook

for clinicians in cancer care today. The editors have brought together leading researchers and therapists, who provide accounts of the prominent models of psychotherapy currently being used in cancer care, the key themes they address and the essential techniques needed to apply each approach successfully. Helpful clinical illustrations are woven throughout the book to make overt the strategies found in each model. Provides practical guidance about how to deliver a range of individual, group, couple and family interventions that have proven utility in cancer care. Describes comprehensively each model of psychotherapy as taught by experts delivering the International Psycho-Oncology Society's Educational Academy on cancer care for patients and their families. Features practical suggestions on therapy delivery from the world's leading proponents of each therapy. Serves as a valuable tool to assist teaching and to facilitate research into psychological interventions in oncology, palliative care and bereavement. Functions

as a readily accessible resource for clinicians struggling to support someone effectively, through its provision of insight into the common challenges and traps that arise when providing patients with emotional support. This practical handbook will help not only psychiatrists, psychologists and social workers but also physicians, surgeons, general practitioners and nurses interested in better understanding and supporting the patients and families they care for. Brief Cognitive Behavior Therapy for Cancer Patients Simon and Schuster
The Handbook of Counseling Women, edited by Mary Kopala and Merle Keitel, draws together a nationally recognized group of contributing scholars and practitioners to address current theories, research, and issues relevant to the mental and physical well-being of women. Comprehensive and accessible, the Second Edition is organized into three parts covering theoretical, sociocultural, biological, and developmental considerations; assessment, diagnosis, and intervention; and

supervision, research, and ethics. The reorganization of this new edition includes more sections and chapters giving special attention to such topics as women and poverty, intimate partner violence, women's career barriers, and considerations for specific ethnic groups.

Handbook of Counseling Women OUP
Oxford

Counselling People with Cancer Mary Burton and Maggie Watson
Counselling People with Cancer is a practical 'how to' book written by two eminent psychologists with many years of hands-on experience in helping patients and their families face, and overcome, the many psychological problems associated with cancer. The book is intended primarily for health care professionals in regular contact with cancer patients and whose work involves a counselling element. It will also be of interest to carers in a broader sense who ask themselves, 'How can I help with the emotional side of dealing with cancer?' The book explains in clear and practical terms what to look and listen for and how to respond to the psychological needs of

cancer patients and their families at different stages of the disease from the 'bad news' interview to coping with the disease and its treatment, facing common communication problems, and dealing with family issues and sexual problems. A comprehensive survey of counselling is presented with discussion of the three mainstream models of counselling - psychodynamic, humanistic and cognitive-behavioural. The final chapter deals with professional issues and offers practical suggestions for setting up a counselling service. Psychologists, psychotherapists, oncologists and nurses will find this book an indispensable guide for helping patients and their families to cope with the difficult experience of cancer.

Depression and Cancer

Oxford University Press, USA

This extraordinary resource celebrates and expands on Dr. David Spiegel's discovery that a shared intimacy with mortality creates very different concerns in the patient from those that apply in conventional settings. Spiegel and Classen introduce mental

health professionals to the awareness as well as the tools they will need to facilitate groups coping with existential crises. The result is a model for helping that actually helps.

Cambridge Handbook of Psychology, Health and Medicine Oxford

University Press, USA

Cancer care today often provides state-of-the-science biomedical treatment, but fails to address the psychological and social (psychosocial) problems associated with the illness. This failure can compromise the effectiveness of health care and thereby adversely affect the health of cancer patients. Psychological and social problems created or exacerbated by cancer--including depression and other emotional problems; lack of information or skills needed to manage the illness; lack of transportation or other resources; and disruptions in work, school, and family life--cause additional suffering, weaken adherence to prescribed treatments, and threaten patients' return to health. Today, it is not possible to deliver high-quality cancer care without using existing approaches, tools, and

resources to address patients' psychosocial health needs. All patients with cancer and their families should expect and receive cancer care that ensures the provision of appropriate psychosocial health services. Cancer Care for the Whole Patient recommends actions that oncology providers, health policy makers, educators, health insurers, health planners, researchers and research sponsors, and consumer advocates should undertake to ensure that this standard is met.

Counseling Women with Breast Cancer McGraw-Hill Education (UK)

The Handbook of Counseling Women addresses current theories, research, and issues relevant to the mental and physical well-being of women. Edited by Mary Kopala and Merle A. Keitel, this comprehensive volume is divided into three parts. Part One focuses on theoretical, sociocultural, biological, and developmental considerations. Part Two is devoted to assessment, diagnosis, and intervention. Part Three covers supervision, research, and ethics. Most chapters include case

studies, recommendations for further reading, and resources for clients. Essential reading for psychologists, social workers, counselors, and psychiatric nurses, this handbook will also appeal to graduate and undergraduate students in counseling, clinical psychology, and clinical social work courses.

Handbook of Oncology Social Work SAGE

Geriatric Psycho-Oncology is a comprehensive handbook that provides best practice models for the management of psychological, cognitive, and social outcomes of older adults living with cancer and their families. Chapters cover a wide range of topics including screening tools and interventions, psychiatric emergencies and disorders, physical symptom management, communication issues, and issues specific to common cancer sites. A resource section is appended to provide information on national services and programs. This book features contributions from experts designed to help clinicians review, anticipate and respond to emotional issues that often arise in the context of treating older cancer patients.

Numerous cross-references and succinct tables and figures make this concise reference easy to use. Geriatric Psycho-Oncology is an ideal resource for helping oncologists and nurses recognize when it may be best to refer patients to their mental health colleagues and for those who are establishing or adding psychosocial components to existing clinics.

Emotional Support Through Breast Cancer

National Academies Press

The most comprehensive and thoroughly researched text available on this topic, Handbook of Group Counseling and Psychotherapy, Second Edition underscores the notion that group work is improved through increased collaboration between researchers and practitioners. Edited by renowned leaders in the field, this thoroughly updated and revised Second Edition explores current literature and research and offers suggestions for practice in psycho-educational, counseling, and therapy groups. The Handbook is divided into five main sections: current and historical perspectives, best practices, multicultural and diverse

groups, groups in special settings, and an introduction to special topics.

Oxford Handbook of Cancer Nursing SAGE

"Psycho-oncology, 4th Edition is solemnly dedicated to Professor Jimmie C. Holland, M.D., internationally recognized as the founder of the field of Psycho-oncology. Dr. Holland, who was affectionately known by her first name "Jimmie", had a profound global influence on the fields of Psycho-oncology, Oncology, Supportive Care, Psychiatry, Behavioral Medicine and Psychosomatic Medicine. At the time of her passing, Dr. Holland was the Attending Psychiatrist and Wayne E. Chapman Chair at Memorial Sloan-Kettering Cancer Center (MSK) and Professor of Psychiatry, Weill Medical College of Cornell University in New York"--
Handbook of Health Psychology and Behavioral Medicine OUP USA

A comprehensive work that brings together and explores state-of-the-art research on the link between stress and health outcomes. Offers the most authoritative resource available, discussing a range of stress theories as

well as theories on preventative stress management and how to enhance well-being. Timely given that stress is linked to seven of the ten leading causes of death in developed nations, yet paradoxically successful adaptation to stress can enable individuals to flourish. Contributors are an international panel of authoritative researchers and practitioners in the various specialty subjects addressed within the work *Effective Group Therapies for Young Adults Affected by Cancer* Oxford University Press, USA. Maintaining dignity for patients approaching death is a core principle of palliative care. Dignity therapy, a psychological intervention developed by Dr. Harvey Max Chochinov and his internationally lauded research group, has been designed specifically to address many of the psychological, existential, and spiritual challenges that patients and their families face as they grapple with the reality of life drawing to a close. In the first book to lay out the blueprint for this unique and meaningful intervention, Chochinov addresses one of the most important dimensions of being human. Being alive

means being vulnerable and mortal; he argues that dignity therapy offers a way to preserve meaning and hope for patients approaching death. With history and foundations of dignity in care, and step by step guidance for readers interested in implementing the program, this volume illuminates how dignity therapy can change end-of-life experience for those about to die - and for those who will grieve their passing. Handbook of Psychooncology Oxford University Press, USA. Increasing efficacy of biomedical treatments for cancer means that more and more people are living longer with the disease. The five-year relative survival rate for all cancers has increased considerably in the last three decades, with some survivors living for many years and thus facing increasingly complex psychosocial issues. As a result, the mental health subspecialty of psycho-oncology is growing and is responding to the many calls for increased availability of psychological services for cancer patients. *Psychosocial Care of the Adult Cancer Patient*

introduces psychologists and other mental health professionals to the field of psycho-oncology, educates them about evidence-based interventions for individuals, groups, couples, and families, and describes how to successfully collaborate with oncologists and other cancer care professionals. Introductory in nature and providing ready access to a range of evidence-based interventions, this book briefs the reader on the field of psycho-oncology and the basics of cancer, explains screening and assessment for psychosocial distress, details the principles of evidence-based interventions, and concludes with case examples that illustrate the evidence-based practice competencies-ask, access, appraise, translate, integrate, and evaluate. In a unique writing style, the case examples reveal the decision-making process of an experienced clinician doing evidence-based practice. Practical strategies for addressing the psychological needs of cancer patients and their families are offered in an easy-to-use, quick reference format. Key points are highlighted and

enhanced through the use of tables and figures designed to summarize and emphasize important information. This book will

be of value to clinical and counseling psychologists and other mental health professionals, as well as graduate students in

psychology, social work, mental health counseling, oncology nursing, and other cancer care professions.
