This book explains the financial appraisal of capital budgeting projects. The coverage extends from the development of basic concepts, principles and techniques to the application of them in increasingly complex and real-world situations. Identification and estimation (including forecasting) of cash flows, project appraisal formulae, and the application of net present value (NPV), internal rate of return (IRR) and other project evaluation criteria are illustrated with a variety of calculation examples. Risk analysis is extensively covered by the use of risk adjusted discount rate, certainty equivalent, sensitivity, simulation and Monte Carlo analysis. The NPV and IRR models are further applied to forestry, property and international investments. Resource constraints are introduced to the capital budgeting decisions with a variety of worked examples using linear programming technique. All calculations are extensively supported by Excel workbooks on the Web, and each chapter is well reviewed by end of chapter questions.

For readers of *Being Mortal* and *When Breath Becomes Air*, the acclaimed founder of Death over Dinner offers a practical, inspiring guide to life's most difficult yet important conversation. Of the many critical conversations we will all have throughout our lifetime, few are as important as the ones discussing death—and not just the practical considerations, such as DNRs and wills, but what we fear, what we hope, and how we want to be remembered. Yet few of these conversations are actually happening. Inspired by his experience with his own father and countless stories from others who regret not having these conversations, Michael Hebb cofounded Death Over Dinner—an organization that encourages people to pull up a chair, break bread, and really talk about the one thing we all have in common. Death Over Dinner has been one of the most effective end-of-life awareness campaigns to date; in just three years, it has provided the framework and inspiration for more than a hundred thousand dinners focused on having these end-of-life conversations. As Arianna Huffington said, "We are such a fast-food culture, I love the idea of making the dinner last for hours. These are the conversations that will help us to evolve." Let's Talk About Death (over Dinner) offers keen practical advice on how to have these same conversations—not just at the dinner table, but anywhere. There's no one right way to talk about death, but Hebb shares time—and dinner—tested

prompts to use as conversation starters, ranging from the spiritual to the practical, from analytical to downright funny and surprising. By transforming the most difficult conversations into an opportunity, they become celebratory and meaningful—ways that not only can change the way we die, but the way we live.

In the United States, some populations suffer from far greater disparities in health than others. Those disparities are caused not only by fundamental differences in health status across segments of the population, but also because of inequities in factors that impact health status, so-called determinants of health. Only part of an individual's health status depends on his or her behavior and choice; community-wide problems like poverty, unemployment, poor education, inadequate housing, poor public transportation, interpersonal violence, and decaying neighborhoods also contribute to health inequities, as well as the historic and ongoing interplay of structures, policies, and norms that shape lives. When these factors are not optimal in a community, it does not mean they are intractable: such inequities can be mitigated by social policies that can shape health in powerful ways. *Communities in Action: Pathways to Health Equity* seeks to delineate the causes of and the solutions to health inequities in the United States. This report focuses on what communities can do to promote health equity, what actions are needed by the many and varied stakeholders that are part of communities or support them, as well as the root causes and structural barriers that need to be overcome.

It is a creative masterpiece which unbundles the DNA of the multinational enterprise and shows how it is the cornerstone of the field of international business. Alan M. Rugman, University of Reading, UK The rise of the multinational enterprise, and the consequent globalisation of the world economy, was arguably the single most important phenomenon of the second half of the twentieth century. This magisterial book, written by two leading authorities, examines this phenomenon in depth. It explains how foreign investment by multinationals diffused advanced technologies and novel management methods, driving productivity growth in Europe, Asia and North America; however, economic inequalities were reinforced as rich countries attracted more foreign investment than poor ones. This new edition of a classic work is not only an authoritative guide to contemporary multinational business, but a major historical resource for the future. Mark Casson, University of Reading, UK This thoroughly updated and revised edition of a widely acclaimed, classic text will be required reading for academics, policymakers and advanced students of international business worldwide. Employing a distinctive and unified framework, this book draws together research across a range of academic fields to offer a synthesis of the determinants of MNE activity, and its effects on the economic and social well-being of developed and developing countries. Unique to the new edition is its focus on the institutional underpinnings of the resources and capabilities of MNEs, and the role of MNE activity in transmitting and facilitating institutional change. Since the initial publication of this book more than a decade ago, the economic, managerial and social implications of globalisation and technological advancement have become even more varied and prominent. Accompanying these developments, there has been a rise in scholarly interest in interdisciplinary research addressing the important challenges of an ever-changing physical and human environment. Drawing on articles and books from international business and economics, as well as economic geography, political economy and strategic management, a systematic overview of the developments in scholarly thinking is pre-

This book presents selected papers on the factors that serve to influence an individual's capacity in financial decision-making. Initial chapters provide an overview of the cognitive factors affecting financial decisions and suggest a link between limited cognitive capacity and the need for financial education. The book then expands on these cognitive limitations to explore the tendency for overconfidence in decision-making and the interplay between rational and irrational factors. Later contributions show how credit card companies benefit from limitations in consumer financial literacy, how gender and cognition intersect to play an important role in financial decision-making, and how to improve financial capacity through financial literacy and education campaigns, including those addressing developed marketplaces. This comprehensive collection of papers will be of value to all readers who seek to better understand the multi-factorial and complex nature of personal financial management in today's economic climate.

An innovative textbook for use in advanced undergraduate and graduate courses; accessible to students in financial mathematics, financial engineering and economics. *Introduction to the Economics and Mathematics of Financial Markets* fills the longstanding need for an accessible yet serious textbook treatment of financial economics. The book provides a rigorous overview of the subject, while its flexible presentation makes it suitable for use with different levels of undergraduate and graduate students. Each chapter presents mathematical models of financial problems at three different degrees of sophistication: single-period, multi-period, and continuous-time. The single-period and multi-period models require only basic calculus and an introductory probability/statistics course, while an advanced undergraduate course in probability is helpful in understanding the continuous-time models. In this way, the material is given complete coverage at different levels; the less advanced student can stop before the more sophisticated mathematics and still be able to grasp the general principles of financial economics. The book is divided into three parts. The first part provides an introduction to basic securities and financial market organization, the concept of interest rates, the main mathematical models, and quantitative ways to measure risks and rewards. The second part treats option pricing and hedging; here and throughout the book, the authors emphasize the Martingale or probabilistic approach. Finally, the third part examines equilibrium models—a subject often neglected by other texts in financial mathematics, but included here because of the qualitative insight it offers into the behavior of market participants and pricing.

'The Handbook is especially recommended to MBA students and faculty and belongs in the reference collections of academic and research libraries. Although each chapter may serve as a self-contained unit, readers will want to look at the larger picture by comparing and contrasting articles found in each part of the work. It should prove to be a helpful source for those studying international banking, economics and finance, and international business.' - Lucy Heckman, American Reference Books Annual 2004 The Handbook of International Banking provides a clearly accessible source of reference material, covering the main developments that reveal how the internationalization and globalization of banking have developed over recent decades to the present, and analyses the creation of a new global financial architecture. The Handbook is the first of its kind in the area of international banking with contributions from leading specialists in their respective fields, often with remarkable experience in academia or professional practice. The material is provided mainly in the form of self-contained surveys, which trace the main developments in a well-defined topic, together with specific references to journal articles and working papers. Some contributions, however, disseminate new empirical findings especially where competing paradigms are evaluated. The Handbook is divided into four areas of interest. The first deals with the globalization of banking and continues on to banking structures and functions. The authors then focus on banking risks, crises and regulation and finally the evolving international financial architecture. Designed to serve as a source of supplementary reading and inspiration, the Handbook is suited to a range of

courses in banking and finance including post-experience and in-house programmes for bankers and other financial services practitioners. This outstanding volume will become essential reference for policymakers, financial practitioners as well as academics and researchers in the field.
