*Administrative Separation of Subsidy from Total Mail Payments to Domestic Air Carriers*  
 Springer  
 Nature  
 “[A] history of air conditioning, chronicling the numerous gimmicks, failed attempts, con jobs, and eventual successes . . . a surprisingly interesting journey.”  
 —San Francisco Book Review  
 The air conditioner is often hailed as one of the

modern world’s greatest inventions—yet nearly as often blamed for global disaster. It has changed everything from architecture to people’s food habits; saved countless lives, and caused countless deaths. First appearing in 1902, when Willis Carrier, an engineer barely out of college, developed the “Apparatus for Treating Air,” everyone assumed it would instantly

change the world. But the story of air conditioning and its rise to ubiquity is far from simple. In *Cool*, Salvatore Basile tracks two fascinating stories: the struggle to perfect an effective cooling device, and the effort to convince people that they actually needed such a thing. With a cast of characters ranging from Leonardo da Vinci to Richard Nixon and Felix the Cat, *Cool*

showcases the myriad reactions to air conditioning as it was developed and introduced to the world. Here is a unique perspective on a common convenience: how we came to rely on it today, and how it might change radically tomorrow.

**Air Carrier Industry Scheduled Service Traffic Statistics, Medium Regional Air Carrier Details** Xlibris Corporation

This comprehensive book has been developed to quickly train an average person for the vast commercial and residential refrigeration and air-conditioning market within a short period of time. It provides all the technical knowledge needed to start a successful refrigeration and air-conditioning business anywhere in the world.
