The book opens a new vista in the sphere of verse translation in India. In the introductory part there is a departure from a mass of Hindi criticism. The bases of selection of dohas from the Sakhi are: (1) Kabir's proverbial and worldly wisdom, (2) analogy-finding gift, (3) richness and variety of imagery, (4) recurrent theme of death, (5) gift for satire, and (6) rhetorical powers. This introductory part primarily focusses on Kabir as poet, which is his real estimate. Thus, the introductory part is a piece of scholarly criticism judging and appreciating Kabir's Sakhi on the canons of English literary criticism. The versification (four-line stanzaform in loose iambic tetrameter lines) has an easy flow and almost parallels the flow of Kabir's dohas. With the Hindi version and notes, the book will be a valuable reading

especially for the English-speaking readers.

Songs of Kabir is a 1915 book consisting of 100 poems of Kabir, the 15th-century Indian poet and mystic, translated to English by Rabindranath Tagore. In this book Kabir has combined the philosophies of Sufism and Hinduism. The book had an introduction by Evelyn Underhill and was published by Macmillan, New York. This book has been translated to Persian and Kurdish by Leila Farjami and Sayed Madeh Piryonesi, respectively.

**Phytomedicine** Elsevier "Few major achievements of world literature are as little known to Americans as the great ecstatic poetry of the Hindus and Sufis, as exemplified by the work of the 15th century master, Kabir. Irreverent while being intensely religious, Kabir seems incredibly playful in his taunting of the sacred dogmas of his time--to readers accustomed to the solemnity and ideological

fidelity of most Western religious poems. Kabir has been translated into English only once before, by Rabindranath Tagore and Evelyn Underhill. Unfortunately, Tagore's Victorian English was simply not equal to Kabir's directness, spontaneity, and irreverent humor. Working from the Tagore-Underhill translation, Bly has done much more than retranslate into American diction. A noted poet himself, he has breathed new life into the work of a fascinating poet"--From back cover.

Earthquakes and Coseismic Surface Faulting on the Iranian Plateau is a comprehensive and well-illustrated multi-disciplinary research work that analyzes the human and physical aspects of the active faults and large-magnitude earthquakes since ancient times on the Iranian Plateau. The long-term historical, archaeological, and sociological record of earthquakes discussed here gives insight into earthquake magnitudes, recurrences, fault segmentation, clustering, and patterns of coseismic ruptures from prehistoric times to the present. The first part of the book examines oral traditions and literature of the region concerned with earthquakes, particularly in folklore, epic literature, and theology. The second part assesses dynamic phenomena associated with earthquakes, including active tectonics, archaeoseismicity, and coseismic surface faulting throughout the twentieth century. This work is a valuable technical survey and an essential

reference for understanding seismic hazard analysis and earthquake risk minimization in earthquake-prone developing and developed countries throughout the world. Provides a reference for seismic hazard evaluation and analysis Covers data dealing with crustal deformations caused by earthquake faulting and folding since historic times Presents unique and complete data for use in empirical relation analyses in all regions One Hundred Poems of Kabir Createspace Independent Publishing Platform  
Nature has consistently provided human beings with bioactive compounds that can be used directly as drugs or indirectly as drug leads. Some of the major classes of natural bioactive compounds include phenolics, alkaloids, tannins, saponins, lignin, glycosides, terpenoids, and many more. They possess a broad range of biological activities and are primarily useful in the treatment of various health issues. At the same time, the search for new and novel drugs is never-ending and, despite major advances in synthetic

chemistry, nature remains an essential resource for drug discovery. Therefore, more and more researchers are interested in understanding the chemistry, clinical pharmacology, and beneficial effects of bioactive compounds in connection with solving human health problems. This book presents a wealth of information on natural metabolites that have been or are currently being used as drugs or leads for the discovery of new drugs. In addition, it highlights the importance of natural products against various human diseases, and their applications in the drug, nutraceuticals, cosmetics and herbal industries. Accordingly, the book offers a valuable resource for all students, educators, and healthcare experts involved in natural product research, phytochemistry, and pharmacological research. **Kabir** Springer Science & Business Media  
In order to understand the true message and spirit of the Holy Quran, it is essential to know the language it has been revealed in. The first step is to understand the meaning of individual words. One needs to understand how words

were used by the ancient Arabs by the time of Quranic revelation, and not depend on anyone's explanation or understanding as to what they mean today. Along with proper understanding of Arabic grammar, the true meanings of Quranic words, and their use with respect to the context in which they have been revealed in, one student of Quran may get closer to the Truth. The task of creating a Quranic dictionary or encyclopedia that would explain the classical meanings of Quranic words and their use along with significance was undertaken by Allama Ghulam Ahmed Parwez in 1960, where he compiled Lughat-ul-Quran in Urdu language. Now this dictionary has been translated to English by Quranic Education Society in Norway, in order to appeal to a larger audience worldwide and to inspire modern Quranic students.

This in-depth study of the classical Hindi tradition brings the world of Mughal-era poetry and court culture alive for an English readership. Allison Busch draws on the perspectives of literary, social, and intellectual history to elucidate one of premodern India's most significant textual traditions, documenting the dramatic rise of a new type of professional Hindi writer while providing critical insight into the motives that animated this literary community and its patrons. Busch examines how riti literature served as an important aesthetic and political resource in the richly multicultural world of Mughal India, and provides, for the first time

in a Western language, a detailed study of the fascinating oeuvre of Keshavdas, whose seminal *Rasikpriya* (Handbook for poetry connoisseurs, 1591) was the catalyst for a new Hindi classicism that attracted a spectacular following in the leading courts of early modern India. The circulation of Hindi literature among diverse communities during this period is testament to a remarkable pluralism that cannot be understood in terms of the nationalist logic that has constrained modern Hindi and Urdu to be "Hindu" and "Muslim" languages since the nineteenth century. With the cultural reforms ushered in by colonialism, north Indians repudiated the classical traditions of the courtly past, a complex process given extended treatment in the final chapter. Busch provides valuable insight into more than two centuries of Hindi courtly culture. Poetry of Kings also showcases the importance of bringing precolonial archives into dialogue with current debates of postcolonial theory.
