Popular Mechanics Maryland National Capital Park &
 "Duncan Phyfe (1770-1854), known during his lifetime as the

"United States Rage," to this day remains America's best-known cabinetmaker. Establishing his reputation as a purveyor of luxury by designing high-quality furniture for New York's moneyed elite, Phyfe would come to count among his clients some of the nation's wealthiest and most storied families. This richly illustrated volume covers the full chronological sweep of the craftsman's distinguished career, from his earliest furniture--which bears the influence of his 18th-century British predecessors Thomas Sheraton and Thomas Hope--to his late simplified designs in the Grecian Plain. More than sixty works by Phyfe and his workshop are highlighted, including rarely seen pieces from private collections and several newly discovered documented works. Additionally, essays by leading scholars bring to light new information on Phyfe's life, his workshop production, and his roster of illustrious patrons. What unfolds is the story of Phyfe's remarkable transformation from a young immigrant craftsman to an accomplished master cabinetmaker and an American icon."--Publisher's website.

Simplified Signs presents a system of manual sign communication intended for special populations who have had limited success mastering spoken or full sign languages. It is the culmination of over twenty years of research and development by the authors. The Simplified Sign System has been developed and tested for ease of sign comprehension, memorization, and formation by limiting the complexity of the motor skills required to form each sign, and by ensuring that each sign visually resembles the meaning it conveys. Volume 1 outlines the research underpinning and informing the project, and places the Simplified Sign System in a wider context of sign usage, historically and by different populations. Volume 2 presents the lexicon of signs, totalling approximately 1000 signs, each with a clear illustration and a written description of how the sign is formed, as well as a memory aid that connects the sign visually to the meaning that it conveys. While the Simplified Sign System originally was developed to meet the needs of persons with intellectual disabilities, cerebral palsy, autism, or aphasia, it may also assist the communication needs of a wider audience – such as healthcare professionals, aid workers, military personnel, travellers or parents, and children who have not yet mastered spoken language. The system also has been shown to enhance learning for individuals studying a foreign language. Lucid and comprehensive, this work constitutes a valuable resource that will enhance the communicative interactions of many different people, and will be of great interest to researchers and educators alike.
