Health and Incarceration

Have you ever thought

about working behind bars? For many nurses, providing health care in a jail or prison is not even a consideration when deciding on a career

direction. In fact, many practicing in the criminal justice system consider themselves to be 'accidental' correctional nurses. Most nurses have little contact with the criminal justice system in nursing school and so are unlikely to choose the specialty. In fact, the general public would rather not think about our patient population. Prisons are often located in out-of-the-way places and the patient population is invisible to most people. Yet over two million Americans are

currently behind bars. That is a lot of people in need of health care. And, at least 95% of prisoners will eventually be released so correctional health care affects public health in a big way. It takes a special person to practice nursing. Nurses must jump into the lives of their patients at a rough point. Illness, injury, and suffering can be ugly, intense, and deeply painful. We deal with body fluids, needles, gaping wounds, and heart-wrenching loss and must take it all in stride. It

takes a special nurse to practice correctional nursing. The criminal justice system is an unlikely health care environment and prisoners are a unique patient population. Here, illness, injury, and suffering are treated in the midst of heightened security, reduced resources, and isolation. Yet many nurses find their calling in this unusual health care setting. The variety and nature of patient health needs and the opportunity to bring care and concern into a

dehumanizing situation can be unexpected job satisfiers. Correctional nurses deal with a population of disadvantaged and vulnerable patients in a difficult time of life. Lack of prior health care contact means nurses can care for patients with unusual conditions along with the mundane ones. Correctional nursing has been described as 'real' nursing as incarcerated patients need health teaching, self-care skills, and chronic disease management.

Correctional nursing practice is autonomous and self-directed. Is correctional nursing for you? Find out in the pages of this short book. Take a few hours to explore the many facets of correctional nursing practice. Look behind the curtain into this hidden practice setting. Discover this well-kept nursing secret and decide if you should consider becoming a correctional nurse. Over two million incarcerated patients need you!

"Essentials of Correctional Nursing is the first new and comprehensive text about this growing field to be published in the last decade. Fortunately, the editors have done a great job in all respects...This book should be required reading for all medical practitioners and administrators working in jails or prisons. It certainly belongs on the shelf of every nurse, physician, ancillary healthcare professional and corrections administrator."--Corhealth (The Newsletter of the

American Correctional Health Services Association) "I highly recommend Essentials of Correctional Nursing, by Lorry Schoenly, PhD, RN, CCHP-RN and Catherine M. Knox, MN, RN, CCHP-RN, editors. This long-awaited book, dedicated to the professional specialty of correctional nursing, is not just a good read, it is one of those books that stays on your desk and may never make it to the bookshelf."--American Jails "Correctional nursing has minimal published texts to support, educate,

and provide ongoing best practices in this specialty. Schoenly and Knox have successfully met those needs with Essentials of Correctional Nursing."--Journal of Correctional Health Care Nurses have been described as the backbone of correctional health care. Yet the complex challenges of caring for this disenfranchised population are many. Ethical dilemmas around issues of patient privacy and self-determination abound, and the ability to

adhere to the central tenet of nursing, the concept of caring, is often compromised. Essentials of Correctional Nursing supports correctional nurses by providing a comprehensive body of current, evidence-based knowledge about the best practices to deliver optimal nursing care to this population. It describes how nurses can apply their knowledge and skills to assess the full range of health conditions presented by incarcerated individuals and determine the urgency and priority

of requisite care. The book describes the unique health needs and corresponding care for juveniles, women, and individuals at the end of life. Chapters are devoted to nursing care for patients with chronic disease, infectious disease, mental illness, or pain, or who are in withdrawal from drugs or alcohol. Chapters addressing health screening, medical emergencies, sick call, and dental care describe how nurses identify, respond to, and manage

these health care concerns in the correctional setting. The Essentials of Correctional Nursing was written and reviewed by experienced correctional nurses with thousands of hours of experience. American Nurses Association standards are woven throughout the text, which provide the information needed by nurses studying for certification exams in correctional nursing. The text will also be of value to nurses working in such settings as emergency

departments, specialty clinics, hospitals, psychiatric treatment units, community health clinics, substance abuse treatment programs, and long-term care settings, where they may encounter patients who are currently or have previously been incarcerated. Key Features: Addresses legal and ethical issues surrounding correctional nursing Covers common inmate-patient health care concerns and diseases Discusses the unique health needs of

juveniles, women, and individuals at the end of life Describes how nurses can safely navigate the correctional environment to create a therapeutic alliance with patients Provides information about health screening, medical emergencies, sick call, and dental care Serves as a core resource in the preparation for correctional nursing certification exams

The Future of Nursing explores how nurses' roles, responsibilities, and education should change significantly to meet the increased demand for care that will be created by health care reform and to advance improvements in America's increasingly complex health system. At more than 3 million in number, nurses make up the single largest segment of the health care work force. They also spend the greatest amount of time in delivering patient care as

a profession. Nurses therefore have valuable insights and unique abilities to contribute as partners with other health care professionals in improving the quality and safety of care as envisioned in the Affordable Care Act (ACA) enacted this year. Nurses should be fully engaged with other health professionals and assume leadership roles in redesigning care in the United States. To ensure its members are well-prepared, the profession should institute residency

training for nurses, increase the percentage of nurses who attain a bachelor's degree to 80 percent by 2020, and double the number who pursue doctorates. Furthermore, regulatory and institutional obstacles -- including limits on nurses' scope of practice -- should be removed so that the health system can reap the full benefit of nurses' training, skills, and knowledge in patient care. In this book, the Institute of Medicine makes recommendations for an action-oriented

blueprint for the future of nursing.
Prison Nurse Springer Science & Business Media
 This volume recognizes and addresses the health care issues of prisoners, to establish best practices and to learn about approaches to these challenges from around the world. It presents new evidence on several emerging and classical prison health issues. The first goal of this volume is to address emerging issues related to health in prison. Second, it presents the most recent

research-based evidence and translates it to the practice. The third goal, is that it allows for sufficient diversity while also incorporating updates of some important already recognized prison health. The volume discusses prisons and the life and well-being of prisoners and staff, after growing problems as drug misuse (incl. tobacco smoking), infectious diseases (HIV/AIDS, hepatitis, STIs and TB), psychiatric problems, inadequate and unhealthy living conditions (incl. nutrition),

overcrowding of prisons. These are addressed adequately in order to meet the international requirements of equivalence of health care. The scope of this volume is at the same type specific and diverse enough to cover the interests of a large audience that includes many types of practitioners involved in health-related issues in the field of prison health care, such as psychologists, nurses and prison administration officers responsible for

health care, legal professionals and social workers.

Based on the experience of many countries in the WHO European Region and the advice of experts, this guide outlines some of the steps prison systems should take to reduce the public health risks from compulsory detention in often

unhealthy situations, to care for prisoners in need and to promote the health of prisoners and prison staff. This requires that everyone working in prisons understand how imprisonment affects health, what prisoners' health needs are, and how evidence-based health services can be provided for everyone needing treatment, care and prevention in prison. Other essential elements are being aware of and accepting internationally recommended standards for prison health;

providing professional care with the same adherence to professional ethics as in other health services; and, while seeing individual needs as the central feature of the care provided, promoting a whole-prison approach to care and promoting the health and well-being of people in custody. *Essentials of Correctional Nursing* Springer Publishing Company Pocket-sized laminated card offers quick access to electrocardiogram (ECG) data.
