Whether piloting a plane and enjoying the panorama below or watching a model you built soar into the blue among the clouds above, flying is always an adventure. Tex Newman looks back at his love affair with airplanes in this book, starting as a boy growing up in West Texas during and after World War II. After the war was won, the military began to get rid of the old fighters and bombers that had fought so valiantly. The author's hometown airport was a refueling place for these old veterans as they made their way from the East Coast to the graveyards out in the Arizona desert. While the pilots were gone, the old planes would sit and wait patiently for the author and his friends to crawl through them. But when the author lost his eye as a boy, all hopes of being a fighter pilot were lost, and he was in danger of becoming depressed. With the help of the Lord, however, he pressed on and even became a pilot later in life. Join the author as he celebrates his faith, his blessings, and his love of flying in *Big Lessons from Little Airplanes*.

Alaska Highway Flight Log Prima Games
Flying To Alaska—A Cross-Continent Adventure Join writer and pilot William S. Walker on one of general aviation's most revered long-distance trips—a flight to Alaska. Walker writes, "Alaska is one of those ultimate journeys for aviators from

the Lower 48 because it takes most of them completely out of their comfortable environments, not for just a four-hour stint or for a few days, but for weeks or longer. We were in the air 74 hours, flying more than 7,000 miles in a 59-year-old Cessna. It was probably the longest flying trip I will ever undertake and perhaps the best I will ever fly, although I hope there is even better to come." *Alaska Highway Flight Log* is Walker's personal daybook of the trip with distances, maps, airport identifiers and, foremost, his personal observations on the flying trip of a lifetime.

In 1972, two pilots—one a federal career engineer, the other the pastor of a prominent church in Washington, D.C.—discovered a common passion for flying airplanes and serving people. One day over lunch, the men conceived a flight plan, one that would undergo many changes before becoming Angel Flight Mid-Atlantic, as it is known today. Ed Boyer of the U.S. Department of Health and Human Services and Dr. Louis Evans, pastor of the National Presbyterian Church, discussed how to pool their interests and qualifications. From its beginnings as a charitable shuttle service for religious leaders and dignitaries, to full-scale charitable air ambulance operations, to Angel Flights for ambulatory patients, the initial vision has grown into a network of over 1,500 volunteer pilots in the Mid-Atlantic region who use their private planes to fly people in need to specialized treatment. Angel Flight coordinates missions of mercy from its offices in Virginia Beach, helping patients to find the shortest distance between home and hope.

No one else ever took a trip like this. Nearly 600 trips, actually. But who cares, I thought, when first approached to edit the manuscript for this book about flying

into every little airport in Indiana, then moving on to those in surrounding states? Pilots? Perhaps. Even so I'm a writer, not a pilot. And Bob Hechlin is a pilot not a writer. Except Bob has an insatiable curiosity about people, places, events, you name it. To him, an airport is more than a name or a spot on a map. He's a great listener. He has ears and eyes for detail nuggets that many people either overlook or don't connect with other nuggets like dots on a page, to create picture after picture after picture. And Bob has a gift for gab. Storytelling, if you will. So if you believe (as I do) that writing is talking when you can't be there, give this book a listen. Hear things you never knew about John Dillinger, Al Capone, a WWII pilot named O'Hare back-road encounters on Mackinac Island and not flying under the bridge out-maneuvering storm clouds the Oshkosh air show close-knit neighborhoods with hangar-garages airports in Ohio police in Gary, Indiana the link between Northwestern University and a historic Lake Michigan passenger-ferry tragedy how a teenager's Happy Birthday flight launched a career and more. Much more. Some people read books from page 1; the opening line hooks them. Others check the ending first. (If I like how it ends, I'll like getting there.) With Honey, feel free to start in the middle; pick a page any page. Chances are, you will quickly be drawn in and pulled onward from one mini-tale to the next. And at some point, you'll say Geez, let's go back and read the rest! I did. C'mon along for the ride. Bob makes even the shortest hop a fun trip. Richard E. Schingoethe

Plane Talk: Cessna Export Tales Texas A&M University Press

General aviation encompasses all the ways aircraft are used beyond

commercial and military flying: private flights, barnstormers, cropdusters, and so on. Authors Janet and Michael Bednarek have taken on the formidable task of discussing the hundred-year history of this broad and diverse field by focusing on the most important figures and organizations in general aviation and the major producers of general aviation aircraft and engines. This history examines the many airplanes used in general aviation, from early Wright and Curtiss aircraft to the Piper Cub and the Lear Jet. The authors trace the careers of birdmen, birdwomen, barnstormers, and others who shaped general aviation—from Clyde Cessna and the Stinson family of San Antonio to Olive Ann Beech and Paul Poberezny of Milwaukee. They explain how the development of engines influenced the development of aircraft, from the E-107 that powered the 1929 Aeronca C-2, the first affordable personal aircraft, to the Continental A-40 that powered the Piper Cub, and the Pratt and Whitney PT-6 turboprop used on many aircraft after World War II. In addition, the authors chart the boom and bust cycle of general aviation manufacturers, the rising costs and increased regulations that have accompanied a decline in pilots, the creation of an influential general aviation lobby in Washington, and the growing popularity of “type” clubs, created to maintain aircraft whose average age is twenty-eight years. This book provides readers with a sense of the scope and richness of the history of general aviation in the United States. An epilogue examining the consequences of the terrorist attacks on September 11, 2001, provides a cautionary note.

Bill Cox has been in love with airplanes since the age of 13, though he refuses to admit how long ago that was. He survived his first airplane ride as a Civil Air Patrol Cadet in a Piper J-3 Cub on skis out of Merrill Field in Anchorage, Alaska, sometime in the middle of the last century. Over the past 60 years of flying, he has logged about 15,000 hours. My Sky chronicles his travels all over the world.

'The broadcast ended abruptly and switched to a Canadian feed playing 'O Canada' over a view of the Canadian Houses of Parliament. The reassurances and smooth talking that had been customary in government messages were absent. "It's a tough world we live in," said Ghislaine.' CHRIS BROWN SPENDS his summer school holidays building an aircraft from a kit. As he finishes it, and is just old enough to fly it, an old pilot at the flying club tells him about his life-long dream of flying a small aircraft across the Atlantic, as ferry pilots did in World War 2. One day, Chris is distracted from his dream by a beautiful girl getting out of a business jet: he just has to meet her. It is a case of love at first sight. Sophie is very involved in the maker-mender movement and wants to go with him on his adventure. He can't take a passenger, so Sophie kisses him goodbye at Montreal as he heads off for his five-day flight, looking forward to

meeting him in England when he arrives. Unknown to Chris and Sophie, events are happening in the world that will change their lives forever. Just hours before his expected European landfall, Chris becomes embroiled in a life-or-death struggle. Sophie greets her hero boyfriend, but is sworn to secrecy about what makes him so...
