Dynamic Business Process Formation for Instant Virtual Enterprises Maximum Press
 Towards collaborative business ecosystems Last decade was fertile in the emerging of new collaboration mechanisms and forms of dynamic virtual organizations, leading to the concept of dynamic business ecosystem, which is supported (or induced ?) by the progress of the ubiquitous pervasive computing and networking. The new technologies, collaborative business models, and organizational forms supported by networking tools "invade" all traditional businesses and organizations what requires thinking in terms of whole systems, i. e. seeing each business as part of a wider economic ecosystem and environment. It is also becoming evident that the agile formation of very dynamic virtual organizations depends on the existence of a proper longer-term "embedding" or "nesting" environment (e. g. regional industry cluster), in order to guarantee certain basic requirements such as trust building ("Trusting your partner" is a gradual and long process); common interoperability, ontology, and distributed collaboration infrastructures; agreed business

practices (requiring substantial engineering re-engineering efforts); a sense of community ("we vs. the others"), and some sense of stability (when is a dynamic state or a stationary state useful). The more frequent situation is the case in which this "nesting" environment is formed by organizations located in a common region, although geography is not a major facet when cooperation is supported by computer networks.

BPV is the application of networked, intelligent IT infrastructure to enhance skilled personnel, processes, and assets, which enables companies to improve efficiencies, increase competitive advantage, heighten brand awareness, reduce costs, and improve bottom line revenues. Unlike business process automation, BPV focuses on new management approaches for personnel and technology, signaling a fundamental change in the way that we think about business and its objectives. While reading *The Case for Virtual Business Processes*, you will understand why BPV is critical to the long-term viability of your business, while learning how to leverage your intelligent networked infrastructure using products and technologies from Cisco Systems.

One of the most significant developments in recent years has been the emergence of global markets, which has triggered opportunities for multinational firms to seek business across national borders. Global markets offer unlimited opportunities. But competition in these markets is intense. To be globally successful, companies must learn to operate and compete in multiple environments which may be different from the home environment. One important prerequisite for success in foreign markets is the ability to negotiate properly. Global business negotiations are affected by the cultural backgrounds of the negotiators, comprising language, cultural conditioning, negotiating style, approaches to problem solving, implicit assumptions, gestures and facial expressions, and the role of ceremony and formality. Therefore, negotiators assigned to deal with their foreign counterparts need a lot of learning and skills. With training and practice such learning and skills can be enhanced. The proposed book offers a practical guide to acquire negotiating skills. The purpose of this book is to provide consistently effective strategies and systematic approaches to negotiations that will dramatically improve international managers as negotiators. The book provides sufficient familiarity with negotiating styles that will help managers identify their

unique strength and weaknesses, thus enabling them to interpret and comfortably use the latest advances in the field of negotiation in dealing internationally.

In recent years, the popularity of virtual worlds has increased significantly and they have consequently come under closer academic scrutiny. Papers about virtual worlds are typically published at conferences or in journals that specialize in something - tirely different, related to some secondary aspect of the research. Thus a paper d- cussing legal aspects of virtual worlds may be published in a law journal, while a psychologist's analysis of situation awareness may appear at a psychology conference. The downside of this is that if you publish a virtual worlds paper at an unrelated conference in this manner you are likely to be one of only a handful of attendees working in the area. You will not, therefore, achieve the most important goal of - tending conferences: meeting and conversing with like-minded colleagues from the academic community of your field of study. Virtual worlds touch on many well-established themes in other areas of science. Researchers from all these fields will therefore be looking at this new, interesting, and growing field. However, to do effective research related to these complex constructs, researchers need to take into account many of the other facets from other fields that impact virtual worlds. Only by being familiar with and paying attention to all these different aspects can virtual worlds be properly understood.

Virtual and augmented reality raise significant questions for law and policy. When should virtual world activities or augmented reality images count as protected First Amendment 'speech', and when are they instead a nuisance or trespass? When does copying them infringe intellectual property laws? When should a person (or computer) face legal consequences for allegedly harmful virtual acts? The *Research Handbook on the Law of Virtual and Augmented Reality* addresses these questions and others, drawing upon free speech doctrine, criminal law, issues of data protection and privacy, legal rights for increasingly intelligent avatars, and issues of jurisdiction within virtual and augmented reality worlds.

Virtual reality--one of the most advanced and exciting technologies to emerge in recent decades--offers businesspeople a new way to grasp information and use it quickly and effectively. By literally experiencing information in an artificially created computer generated world instead of reading, hearing, or viewing it on a screen, businesspeople can get information in a way that has proved most successful and most natural for humans. The result is saved time and money, savings that are essential to any enterprise if it is to survive and prosper in today's fast-paced, competitive business environment. Designed and written specifically for businesspeople in business situations, Thierauf's book is an essential source of information, and a major contribution to understanding today's business technologies and how their benefits will accrue in years to come.

The fast progress in computer networks and their wide availability complemented with on one hand the "explosion" of

the mobile computing and on the other hand the trends in the direction of ubiquitous computing, act as powerful enablers for new forms of highly dynamic collaborative organizations and emergence of new business practices. The first efforts in virtual enterprises (VE) were strongly constrained by the need to design and develop horizontal infrastructures aimed at supporting the basic collaboration needs of consortia of enterprises. Even pilot projects that were focused on specific business domains were forced to first develop some basic infrastructures before being able to develop their specific business models. Nowadays, although there is still a need to consolidate and standardize the horizontal infrastructures, the focus is more and more directed to the development of new vertical business models and the corresponding support tools. At the same time, in the earlier R&D projects, the attention was almost exclusively devoted to the operation phase of the VE life cycle, while now there are more activities addressing the creation phase, developing mechanisms to support the rapid formation of new virtual organizations for new business opportunities. In order to complete the life cycle, there is a need to also invest on support for VE dissolution.
