In Chapter 3, Axiomatic Design was discussed as a general design tool. Axiom 2 in particular, regarding information content, leads to the design of systems with a minimum number of functional requirements (Corollary 2), and sets the broadest acceptance intervals possible (Corollary 6). 2. Axiomatic design versus design structure matrix

2.1. Advantages and disadvantages of axiomatic design. The underlying hypothesis of the AD is that there exist fundamental principles that govern good design practice. The main distinguishable components of the AD theory are domains, hierarchies, and design axioms. Design as integration of axiomatic design and design ... Axiomatic design is a systems design methodology using matrix methods to systematically analyze the transformation of customer needs into functional requirements, design parameters, and process variables. Specifically, a set of functional requirements (FRs) are related to a set of design parameters (DPs) by a Design Matrix $A: [FR] = [A] [DP]$. The method gets its name from its use of design principles ... Axiomatic design - Wikipedia

Axiomatic design and design structure matrix (DSM) are two popular design methods at the moment, while most related researches only apply the basic ideas of axiomatic design or DSM to some use cases. This paper analyses the disadvantages of both axiomatic design and DSM. Design as integration of axiomatic design and design ... A design decomposition-integration model, named COPE, is proposed in which Axiomatic Design Matrices (DM) map Functional Requirements to Design Parameters while Design Structure Matrices (DSM) provide

structured representation of the system development context. In COPE, the DM and the DSM co-evolve. Application of axiomatic design and design structure ... Axiomatic technology uses easy to read maps to show how design elements affect the functions of the design. In these dependency maps, each column is a design element, while each row is a function. The cell shows whether the column's design element affects the function of that row: If so, the cell has an X, if not there is no X.
