Trace the evolution of automatic Morse code devices from the early 1800s to today through this informative text and over 1,100 photos. Beginning with an overview of telegraphy and early key history, fifteen sections explore the equipment used to send messages over long distances. Featured are code readers, oscillators, Morse trainers, electronic keyers, single- and dual-lever paddles, portable paddles, automatic mechanical keys, accessories, and more. Each device is presented in text and images, some with classic advertisements; this combination allows the reader to appreciate device development and better understand the thinking that went into the design. Paddle and key maintenance and adjustment are also examined, as well as computer interfacing and use of the Internet. The book also includes the results of patent studies and historical research, with many new findings presented, making it a must-have for collectors, ham operators, or anyone interested in the history of these communication devices.

A 16 year-old high school dropout leaves home to avoid incarceration in a Juvenile Court Detention Center for placement in an orphanage. Using a falsified birth certificate he enlists in the army where he finds himself in an extremely hostile environment. Seeking refuge in the army, he discovers that he cannot run away from himself or escape the family curse. As a member of the elite United States Army Constabulary in occupied-Germany, he faces the greatest challenge of his life amid the war torn ruins of a conquered nation. The book describes, in lurid detail, the misadventures of the men in the lower echelons of the military establishment and the effects of their relationships with the German populace. As a fraudulent enlistee, he lives in constant fear of being discovered. He is further plagued by premonitions of doom by the family "curse", the result of an unconscionable sin committed by his maternal grandfather. Born into an impoverished, dysfunctional family in the middle of the Great Depression, he struggles to overcome the indoctrination of inferiority and social ostracism resulting from his mother's alcoholism. The story traces the family history from his ancestors' 19th century Mississippi plantation to the early 1950s in segregated Birmingham, Alabama.

"Beautifully written, eloquently reasoned...Mr. Buonomano takes us off and running on an edifying scientific journey." —Carol Tavis, Wall Street Journal In *Your Brain Is a Time Machine*, leading neuroscientist Dean Buonomano embarks on an "immensely engaging" exploration of how time works inside the brain (Barbara Kiser, Nature). The human brain, he argues, is a complex system that not only tells time, but creates it; it constructs our sense of chronological movement and enables "mental time travel"—simulations of future and past events. These functions are essential not only to our daily lives but to the evolution of the human race: without the ability to anticipate the future, mankind would never have crafted tools or invented agriculture. This virtuosic work of popular science will lead you to a revelation as strange as it is true: your brain is, at its core, a time machine.

25 years after my father passed away, I came across a draft of a book he started. My editing and

publishing leaves much of the original text intact and only clarifies or adds informative detail where necessary. I was proud and honoured to take this up where my father left off. Many books have been written about the Canadian sailors who fought in World War II in ships and the airmen who flew against the enemy in the sky but there have not been many books written about the young Canadians who engaged the enemy in tanks. Apart from Regimental Histories, their brave story is rarely told This book is an attempt to remedy that by telling the experience of a young boy becoming a man as a Canadian Grenadier Guard, away from home in England. 4th Canadian Armoured Division, 22nd Canadian Armoured Regiment (22CAR)

Anne Glyn-Jones opens up the secret world of the interceptors of German Morse Code signals during World War II. Leaving her girls' boarding school with romantic ideas about joining the navy as a Wren, Anne had no idea that she would be working for the mysterious 'Station X', which we now know to be Bletchley Park. Round the clock shifts, bed bugs, rats and poor diet took its toll, as well as the ongoing lack of recognition from the Navy hierarchy. Morse Code Wrens of Station X is a very personal memoir of a young woman's experiences of war time service, as well as providing fascinating insights into the daily realities of the battle for military intelligence superiority.

In this brilliantly conceived and written biography, Pulitzer Prize-winning Kenneth Silverman gives us the long and amazing life of the man eulogized by the New York Herald in 1872 as "perhaps the most illustrious American of his age." Silverman presents Samuel Morse in all his complexity. There is the gifted and prolific painter (more than three hundred portraits and larger historical canvases) and pioneer photographer, who gave the first lectures on art in America, became the first Professor of Fine Arts at an American college (New York University), and founded the National Academy of Design. There is the republican idealist, prominent in antebellum politics, who ran for Congress and for mayor of New York. But most important, there is the inventor of the American electromagnetic telegraph, which earned Morse the name Lightning Man and brought him the fame he sought. In these pages, we witness the evolution of the great invention from its inception as an idea to its introduction to the world—an event that astonished Morse's contemporaries and was considered the supreme expression of the country's inventive genius. We see how it transformed commerce, journalism, transportation, military affairs, diplomacy, and the very shape of daily life, ushering in the modern era of communication. But we discover as well that Morse viewed his existence as accursed rather than illustrious, his every achievement seeming to end in loss and defeat: his most ambitious canvases went unsold; his beloved republic imploded into civil war, making it unlivable for him; and the commercial success of the telegraph engulfed him in lawsuits challenging the originality and ownership of his invention. Lightning Man is the first biography of Samuel F. B. Morse in sixty years. It is a revelation of the life of a fascinating and profoundly troubled American genius.
