This Color Atlas of Anatomy features full-  
color photographs of actual cadaver  
dissections, with accompanying  
schematic drawings and diagnostic  
images. The photographs depict  
anatomic structures with a realism  
unmatched by illustrations in traditional  
atlases and show students specimens as  
they will appear in the dissection lab.  
Chapters are organized by region in  
order of standard dissection, with  
structures presented both in a systemic  
manner, from deep to surface, and in a  
regional manner. This edition has

additional clinical imaging, including MRIs, CTs, and endoscopic techniques. New graphics include clinically relevant nerve and vessel varieties and antagonistic muscle functions. Many older images have been replaced with new, high-resolution images. Black-and-white dissection photographs have been replaced with color photography. A companion website will include an Image Bank, interactive software (similar to an Interactive Atlas), and full text online.
