Layer of protection analysis (LOPA), the new, simplified method of risk assessment for acute process safety risks, provides a middle ground between qualitative process hazard analysis and traditional, expensive quantitative risk analysis.

Layer of Protection Analysis (LOPA) is a risk management technique commonly used in the chemical process industry that can provide a more detailed, semi-quantitative assessment of the risks and layers of protection associated with hazard scenarios. LOPA allows the safety review team an opportunity to discover weaknesses and strengths in the safety systems used to protect employees, the plant, and the public.
