This book focusses on ground stone tools, stone vessels, and devices carved into rock across the Near East and Egypt from prehistory to the later periods. The aim is to explore all aspects of these tools and stimulate a debate about new methodologies to approach this material.

 Organic Reaction Mechanisms 2016, the 52nd annual volume in this highly successful and unique series, surveys research on organic reaction mechanisms described in the available literature dated 2016. The following classes of organic reaction mechanisms are comprehensively reviewed: • Reaction of Aldehydes and Ketones and their Derivatives • Reactions of Carboxylic, Phosphoric, and Sulfonic Acids and their Derivatives • Oxidation and Reduction • Carbenes and Nitrenes • Nucleophilic Aromatic Substitution • Electrophilic Aromatic Substitution • Carbocations • Nucleophilic Aliphatic Substitution • Carbanions and Electrophilic Aliphatic Substitution • Elimination Reactions • Polar Addition Reactions • Cycloaddition Reactions • Molecular Rearrangements

The volume offers a comprehensive introduction to the archaeology of the southern Levant (modern day Israel, Palestine and Jordan) from the Paleolithic period to the Islamic era, presenting the past with chronological changes from hunter-gatherers to empires. Written by an international team of scholars in the fields of archaeology, epigraphy, and bioanthropology, the volume presents central debates around a range of archaeological issues, including gender, ritual, the creation of alphabets and early writing, biblical periods, archaeometallurgy, looting, and maritime trade. Collectively, the essays also engage diverse theoretical approaches to demonstrate the multi-vocal nature of studying the past. Significantly, [The Social Archaeology of the Levant](#) updates and contextualizes major shifts in archaeological interpretation.

The Congress "Arsenic in the Environment" offers an international, multi- and interdisciplinary discussion platform for research and innovation aimed towards a holistic solution to the problem posed by the environmental toxin arsenic, with considerable societal impact. The congress has focused on cutting edge and breakthrough research in physical, chemical, toxicological, medical, agricultural and other specific issues on

arsenic across a broader environmental realm. The Congress "Arsenic in the Environment" was first organized in Mexico City (As2006) followed by As2008 in Valencia, Spain, As2010 in Tainan, Taiwan, As2012 in Cairns, Australia and As2014 in Buenos Aires, Argentina. The 6th International Congress As2016 was held June 19-23, 2016 in Stockholm, Sweden and was entitled Arsenic Research and Global Sustainability. The Congress addressed the broader context of arsenic research along the following themes: Theme 1: Arsenic in Environmental Matrices and Interactions (Air, Water, Soil and Biological Matrices) Theme 2: Arsenic in Food Chain Theme 3: Arsenic and Health Theme 4: Clean Water Technology for Control of Arsenic Theme 5: Societal issues, Policy Studies, Mitigation and Management Long term exposure to low-to-medium levels of arsenic via contaminated food and drinking water can have a serious impact on human health and globally, more than 100 million people are at risk. Since the end of the 20th century, arsenic in drinking water (mainly groundwater) has emerged as a global health concern. In the past decade, the presence of arsenic in plant foods – especially rice – has gained increasing attention. In the Nordic countries in particular, the use of water-soluble inorganic arsenic chemicals (e.g. chromated copper arsenate, CCA) as wood preservatives and the mining of sulfidic ores have been flagged as health concern. The issue has been accentuated by discoveries of naturally occurring arsenic in groundwater, primarily in the private wells, in parts of the Fennoscandian Shield and in sedimentary formations, with potentially detrimental effects on public health. Sweden has been at the forefront of research on the health effects of arsenic, technological solutions for arsenic removal, and sustainable mitigation measures for developing countries. Hosting this Congress in Sweden was also relevant because historically Sweden has been one of the leading producer of As2O3 and its emission from the smelting industries in northern Sweden and has successfully implemented actions to reduce the industrial emissions of arsenic as well as minimizing the use of materials and products containing arsenic in since 1977. The Congress has gathered professionals involved in different segments of interdisciplinary research in an open forum, and strengthened relations between academia, industry, research laboratories, government agencies and the private sector to share an optimal atmosphere for exchange of knowledge, discoveries and discussions about the problem of arsenic in the environment and catalyze the knowledge generation and innovations at a policy context to achieve the goals for post 2015 Sustainable Development.

Since the beginning of the 21st century, Panama has exhibited remarkable economic growth and has reduced the gap in terms of income per capita with high-income countries. Social progress has

also been achieved, mainly through the reduction of poverty and advances in some well-being dimensions.

[Materials for Biomedical Engineering: Bioactive Materials, Properties, and Applications](#) introduces the reader to a broad range of the different types of bioactive materials used in biomedical engineering. All the main types of bioactive materials are discussed, with an emphasis placed on their synthesis, properties, performance, and potential for biomedical applications. Key chapters on modeling and surface modification and methods provide the step-by-step information needed by researchers. Important applications of bioactive materials, such as drug delivery, cancer therapy and clinical dentistry are also highlighted in detail. Final sections look at future perspectives for bioactive materials in biomedical engineering. Provides a knowledge of the range of bioactive materials available, enabling the reader to make optimal materials selection decisions Presents detailed information on current and proposed applications of the latest bioactive materials, thus empowering readers to design innovative products and processes Covers methods and provides the detailed guidance needed by researchers to replicate key procedures and contribute to further research and discovery in this important field

The nEU-Med project is part of the Horizon 2020 programme, in the ERC Advanced project category. It began in October 2015 and will be concluded in October 2020. The University of Siena is the host institution of the project. The project is focussed upon two Tuscan riverine corridors leading from the Gulf of Follonica in the Tyrrhenian Sea to the Colline Metallifere. It aims to document and analyze the form and timeframe of economic growth in this part of the Mediterranean, which took place between the 7th and the 12thc. Central to this is an understanding of the processes of change in human settlements, in the natural and farming landscapes in relation to the exploitation of resources, and in the implementation of differing political strategies. This volume brings together the research presented at the first nEU Med workshop,

held in Siena on 11-12 April, 2017. The aim of the workshop was to draw up an initial survey of research and related work on the project, one and a half years after its inception. The project is composed of several research units. Each unit covers an aspect of the interdisciplinary research underpinning the nEU-Med project, each with their own methodology. For this first volume of results, it was decided not to give an account of all the work carried out within all the units, but to select those lines of investigation which, at the end of the first year and a half, have made it possible to articulate and develop an interdisciplinary research strategy.

This book presents an accounting framework to critically review existing studies of aid's macroeconomic effects and as a basis for four country studies on Guinea-Bissau, Nicaragua, Tanzania and Zambia. This framework focuses on the impact of different types of aid on the level and composition of key macroeconomic aggregates such as imports, investment and government expenditure. The importance of the relationship between aid and policy reform is also stressed. The case studies find that aid has had a generally positive contribution, though recommendations to further improve aid impact are also given.

Although economic openness left Mexico more exposed to the global financial crisis than some of its Latin American peers, its economic profile has since allowed it to bounce back as global trade and investment flows recover. Meanwhile, Mexico has avoided the recent economic weakness of more commodity-dependent economies in the region. At the same time, past structural reforms are starting to bear fruit and bode well for growth prospects in the medium to long term.

Commodity Derivatives In the newly revised Second Edition of *Commodity Derivatives: Markets and Applications*, expert trading educator and author Neil Schofield delivers a comprehensive overview of a wide variety of commodities and derivatives. Beginning with discussions of commodity markets generally before moving on to derivative valuation and risk management, the author then dives into individual commodity markets, like gold, base metals, crude oil, natural gas, electricity, and more. Schofield relies on his extensive experience at Barclays Investment Bank to offer readers detailed examinations of commodity finance and the use of commodities within a wider investment portfolio. The second edition includes discussions of critical new topics like dual curve swap valuation, option valuation within a negative price environment using the Bachelier model, volatility skews, smiles, smirks, term structures for major commodities, and more. You'll find case studies on corporate failures linked to improper commodity risk management, as well as explorations of issues like the impact of growing interest in electric vehicles on commodity markets. The text of the original edition has been updated and expanded and new example transactions are included to help the reader understand the concepts discussed within. Each chapter follows a uniform structure, with typical demand and supply patterns following a non-technical description of the commodity at issue. Discussions of the physical markets in each commodity and the main exchange-traded and over-the-counter products conclude each chapter. Perfect for commodity and derivatives traders, analysts, and risk managers, the Second Edition of *Commodity Derivatives: Markets and Applications* will also earn a place in the libraries of students and academics studying finance and the graduate intake in financial institutions. A one-stop resource for the main commodity markets and their associated derivatives Finance professionals seeking a single volume that fully describes the major commodity markets and their derivatives will find everything they need in the latest edition of *Commodity Derivatives: Markets and Applications*. Former Global Head of Financial Markets Training at Barclays Investment Bank Neil Schofield delivers a rigorous and authoritative reference on a crucial, but often overlooked, subject. Completely revised and greatly expanded, the Second Edition of this essential text offers finance professionals and students coverage on every major class of commodities, including gold, steel, ethanol, crude oil, and more. You'll also find discussions of derivative valuation, risk management, commodity finance, and the use of commodities within an investment portfolio. Non-technical descriptions of major commodity classes ensure the material is accessible to everyone while still in-depth and rigorous enough to deliver key information on an area central to global finance. Ideal for students and academics in finance, *Commodity Derivatives* is an indispensable guide for commodity and derivatives traders, analysts, and risk managers who seek a one-volume resource on foundational and advanced topics in commodity markets and their associated derivatives.

This book successfully connects archaeology and archaeometallurgy with geoscience and metallurgy. It addresses topics concerning ore deposits, archaeological field evidence of early metal production, and basic chemical-physical principles, as well as experimental ethnographic works on a low handicraft base and artisanal metal production to help readers better understand what happened in antiquity. The book is chiefly intended for scholars and students engaged in interdisciplinary work.

This fourth edition of *Historical Dictionary of Mongolia* covers the people and organizations that brought Mongolia from revolution and oppression to independence and democracy, and its current unprecedented level of national wealth and international growth. This is done through a chronology, an introduction, appendixes, and an extensive bibliography. The dictionary section has over 1,200 cross-referenced entries on important personalities, politics, economy, foreign relations, religion, and culture. This book is an excellent resource for students, researchers, and anyone wanting to know more about Mongolia.

This two-volume set LNAI 10313 and LNAI 10314 constitutes the proceedings of the International Joint Conference on Rough Sets, IJCRS 2017, held in Olsztyn, Poland, in July 2017. The 74 revised full papers presented together with 16 short papers and 16 invited talks, were carefully reviewed and selected from 130 submissions. The papers in this two set-volume of IJCRS 2017 follow the track already rutted by RSCTC and JRS conferences which aimed at unification of many facets of rough set theory from theoretical aspects of the rough set idea bordering on theory of concepts and going through algebraic structures, topological structures, logics for uncertain reasoning, decision algorithms, relations to other theories of vagueness and ambiguity, then to extensions of the rough set idea like granular structures, rough mereology, and to applications of the idea in diverse fields of applied science including hybrid methods like rough-fuzzy, neuro-rough, neuro-rough-fuzzy computing. IJCRS 2017 encompasses topics spread among four main tracks: Rough Sets and Data Science (in relation to RSCTC series organized since 1998); Rough Sets and Granular Computing (in relation to RSFDGrC series organized since 1999); Rough Sets and Knowledge Technology (in relation to RSKT series organized since 2006); and Rough Sets and Intelligent Systems (in relation to RSEISP series organized since 2007).

The Rise of Metallurgy in Eurasia is a landmark study in the evolution of early metallurgy in the Balkans. It demonstrates that far from being a rare and elite practice, the earliest metallurgy in the world was a common and communal craft activity.
