In set theory and its applications throughout mathematics, a class is a collection of sets (or sometimes other mathematical objects) that can be unambiguously defined by a property that all its members share. The precise definition of "class" depends on foundational context. In work on Zermelo–Fraenkel set theory, the notion of class is informal, whereas other set theories, such as von ... Class (set theory) - Wikipedia Set theory begins with a fundamental binary relation between an object  $o$  and a set  $A$ . If  $o$  is a member (or element) of  $A$ , the notation  $o \in A$  is used. A set is described by listing elements separated by commas, or by a characterizing property of its elements, within braces  $\{ \}$ . Set theory - Wikipedia Classical set is a collection of distinct objects. For example, a set of students passing grades. Each individual entity in a set is called a member or an element of the set.
