Engines of Change Dundurn

On July 25, 2010, Arnold Ebnetter flew across the country in a plane he designed and built himself, setting an aviation world record for aircraft of its class. He was eighty-two at the time and the flight represented the culmination of a dream he'd cultivated since his childhood in the 1930s. Eileen Bjorkman — herself a pilot and aeronautical engineer — frames her father's journey from teenage airplane enthusiast to Air Force pilot and Boeing engineer in the context of the rise, near extermination, and ongoing interest in homebuilt aircraft in the United States. She gives us a glimpse into life growing up in a "flying family" with two pilots for parents, a family plane named Charlie, and quite literally, a propeller under her parents' bed. From early airplane designs serialized in magazines to the annual Oshkosh Fly-in where you can see experimental aircraft on display, Bjorkman offers a personal take on the history of building something in your garage that you can actually (and legally) fly as well as how the homebuilt aircraft movement has contributed to aviation and innovation in America. Dave is a man of determination and dedication in overcoming a challenge a man who will not take no for an answer. After a near-fatal airplane accident, Dave's doctors told him he would never walk again. But he did! They told him he would never return to his job at Ford Motor Company. But he did! And they told him he would never fly an airplane again. But he did! *The Spirit's Journey* describes Dave's lifelong involvement in aviation with many interesting and humorous anecdotes. Bob Pauley, private and glider pilot, aviation photographer, and author. There is a story buried in this manuscript of when Mac McKenzie flew my mother and me for my first airplane ride. After the flight (I must have been three or four years old), Dave and I sat in the airplane and talked. He explained all the controls, instruments; and how they related to flying an airplane. I was hooked for life. He is responsible for my start in what turned out to be a very great and successful career in aviation. Captain John D. Patten, Delta Airlines, Retired. There's little doubt in my mind, there's something we learn about ourselves, from the people that enter our lives. After reflecting on Dave McKenzie's determination to succeed, courage, and will to overcome the adversities as told in his book, I hope you gain insight to your life's perspective, its experiences, and that you become the person you truly wish to be. John O. Maxfield, corporate pilot. In the heartwarming memoir *The Spirit's Journey*, Dave McKenzie shares the inspiring story of how he overcame lifelong pressures, family opposition, and incredible personal hurdles in order to follow his dream of flying an airplane. As a young boy, he felt

there could never be any odor more pleasant than the exhaust fumes that emitted from a small airplane engine. As each airplane he rode in started its take-off run, Dave would revel in the sensation of freedom he felt even as a passenger. He shares how both his mother and his teachers opposed his preferred career choice of becoming a pilot, but he also details how he relied on his determination, effort, and intelligence to make the most of his love of aviation while still enjoying a career as an automobile chassis designer. Yet his adventuresome choices were not without challenges. After he becomes an aerobatic pilot, he chronicles the disastrous air show and subsequent injuries that nearly ended his life and his dreams. Dave McKenzie's story proves that the human spirit is a much stronger force than we ever imagined even when faced with seemingly insurmountable obstacles.

[The Rise, the Fall, and the Resurgence of the Electric Car](#) California Bill's Automotive Handbooks
The resurgence of the electric car in modern life is a tale of adventurers, men and women who bucked the complete dominance of the fossil fueled car to seek something cleaner, simpler and cheaper. Award-winning former Wall Street Journal reporter John Fialka documents the early days of the electric car, from the M.I.T./Caltech race between prototypes in the summer of 1968 to the 1987 victory of the Sunraycer in the world's first race featuring solar powered cars. Thirty years later, the electric car has captured the imagination and pocketbooks of American consumers. Organizations like the U.S. Department of Energy and the state of California, along with companies from the old-guard of General Motors and Toyota as well as upstart young players like Tesla Motors and Elon Musk have embraced the once-extinct technology. The electric car has steadily gained traction in the U.S. and around the world. We are watching the start of a trillion dollar, worldwide race to see who will dominate one of the biggest commercial upheavals of the 21st century. Drawing from the last decade of his 26-year career at the Wall Street Journal, where he covered energy and environmental matters, ClimateWire founder and industry insider John Fialka brings to life this thrilling and important story about American's rejection and second obsession with the electric car.

The Spirit's Journey Converting the Corvair Automobile Engine for Aircraft UseHow to Keep Your Corvair Alive

A narrative like no other: a cultural history that explores how cars have both propelled and reflected the American experience— from the Model T to the Prius. From the assembly lines of Henry Ford to the open roads of Route 66, from the lore of Jack Kerouac to the sex appeal of the Hot Rod, America's history is a vehicular history—an idea brought brilliantly to life in this major work by Pulitzer Prize-winning journalist Paul Ingrassia. Ingrassia offers a wondrous epic in fifteen automobiles, including the Corvette, the Beetle, and the Chevy Corvair, as well as the personalities and tales behind them: Robert McNamara's unlikely role in Lee Iacocca's Mustang, John Z. DeLorean's Pontiac GTO, Henry Ford's Model T, as well as Honda's Accord, the BMW 3 Series, and the Jeep, among others. Through these cars and these characters, Ingrassia shows how the car has expressed the particularly American tension between the lure of freedom and the obligations of utility. He also takes us through the rise of American manufacturing, the suburbanization of the country, the birth of the hippie and the yuppie, the emancipation of women, and many more fateful episodes and eras, including the car's unintended consequences: trial lawyers, energy crises, and urban sprawl. Narrative history of the highest caliber, *Engines of Change* is an entirely edifying new way to look at the American story.
