Introductory Accounting, Finance and Auditing for Lawyers, Fourth Edition, continues to be packed with incisive substance on accounting and finance, and also emphasizes the role of auditing in the financial reporting process, an element given substantial new weight under the Sarbanes-Oxley Act. The Fourth Edition reflects the significant developments in the world of accounting, finance and auditing, including those generated by the major scandals such as Enron and the responses generated by Sarbanes-Oxley, from the Act itself, to the Public Company Accounting Oversight Board (PCAOB) to the SEC. The book retains the same basic architecture, narrative style, problems, and pitch to law students as in previous editions, and adds substantial new material. Additions include three entirely new Chapters, several new Sections added to existing Chapters, new Tables, and enhanced technical formatting. New Chapters include Audit Practice, an introduction to the key features of a financial audit including an Illustration and Problem concerning the leading statistical sampling techniques auditors apply in tests of internal control over financial reporting. Another new Chapter is Finance Theory, a rigorous but still introductory account of modern portfolio theory, CAPM and efficient market theory with critiques from behavioral finance inspired in part by the Enron-style accounting scandals. Previous users of the book will find all the familiar Illustrations and Problems, along with a solid dose of new materials geared toward the increasing reliance being placed on auditing, audit committees, and corporate

governance in the era ushered in by Sarbanes-Oxley and PCAOB.

Dozens of judicial opinions have held that shareholders own corporations, that directors are agents of shareholders, and even that directors are trustees of shareholders' property. Yet, until now, it has never been proven. These doctrines rest on unsubstantiated assumptions. In this book the author performs a rigorous, systematic analysis of common law, contract law, property law, agency law, partnership law, trust law, and corporate statutory law using judicial rulings that prove shareholders do not own corporations, that there is no separation of ownership and control, directors are not agents of shareholders, and shareholders are not investors in corporations. Furthermore, the author proves the theory of the firm, which is founded on the separation of ownership and control and directors as agents of shareholders, promotes an agenda that wilfully ignores fundamental property law and agency law. However, since shareholders do not own the corporation, and directors are not agents of shareholders, the theory of the firm collapses. The book corrects decades of confusion and misguided research in corporate law and the economic theory of the firm and will allow readers to understand how property law, agency law, and economics contradict each other when applied to corporate law. It will appeal to researchers and upper-level and graduate students in economics, finance, accounting, law, and sociology, as well as attorneys and accountants.

The principles of accounting and finance directly extend to contract issues, torts, business and securities matters, taxation issues, partnership disputes, gift and estate matters, to name only a partial list. These areas of jurisprudence are often based significantly on substantive financial questions, and their measurement can be the heart of the entire matter. The application of broad accounting principles to countless business transactions requires an understanding of the objectives of financial reporting and the needs of the users of financial information. Contrary to popular belief, accounting is not a mathematical formula or calculation, but rather an organized system that logically summarizes business transactions into useable information that is meaningful to management, creditors, business investors and other stakeholders. This text takes readers through the system of accounting and the development of financial statements. Complexities and limitations of accounting information are explored, culminating in a study of ratio analysis of financial statements to glean relevant insights. The objective of this introductory study of accounting is to provide a broad, workable knowledge base that will facilitate the use of accounting information as it relates to the practice of law.
