Since it was established by Ove Arup in 1946, Arup has been the design, architectural and engineering genius behind many of the world's leading buildings and urban areas. The team has been pivotal in creating some of the world's best-known developments: from the groundbreaking Sydney Opera House to the unconventional Centre Pompidou in Paris and Crossrail, the largest construction project in Europe today. Beyond iconic

buildings, Arup's influence is also in evidence behind the scenes. The hidden hand of the engineer has transformed many of our everyday experiences - often without us knowing. Arup has developed leading fire-safety systems in airports, cooling systems in museums to protect priceless artworks, and its experience with acoustics ensures every note is heard in the world's leading opera houses. The book focuses on some of the biggest global issues to arise over the past 70 years. They include the population explosion and subsequent increase in city living, as well as changes in transport patterns that have fuelled the construction of airports, roads, rail and bridges, and even the democratisation of sporting events. Looking at Arup's work under the lens of these world-shaping events, we show how this is a firm that has not just responded to a changing world, but has anticipated and led many of those changes. Arup takes its place in society seriously. Collaborations such as the partnership with C40 to tackle climate change are impacting the way future generations will live. Looking to the future, this is a firm that will continue on its mission to shape a better world.

10 Practices for Creating Deeper Connections Penguin

From the unbridled lands of East Texas, tenacious men with diverse backgrounds came together to form the Twenty-Second Texas Infantry. Also known as Hubbard's regiment, families synonymous with the Texas Revolution joined the ranks of politicians, attorneys, farmers, and teachers. Many championed Southern values whereas some campaigned for Northern agendas. Yet, most were Texan by choice and they sought to defend their homes. The regiment's stories of triumph and sorrow intertwined with American history as the men drugged across the unforgiving lands west of the Mississippi River. They fought in the bloody encounters of Fort DeRussy, Mansfield, Pleasant Hill, and Jenkins' Ferry as life-threatening diseases complicated their service. Their ambitious marches forever tied them to the story of Texas during the Civil War.

With Building in France, Building in Iron, Building in Ferroconcrete (1928)—published now for the first time in English—Sigfried Giedion positioned himself as an eloquent advocate of modern architecture. This was the first book to exalt Le Corbusier as the artistic champion of the new movement. It also spelled out many of the tenets of Modernism that are now regarded as myths, among them the impoverishment of nineteenth-century architectural thinking and practice, the contrasting vigor of engineering innovations, and the notion of Modernism as technologically preordained.
