The Balanced Scorecard translates a company's vision and strategy into a coherent set of performance measures. The four perspectives of the scorecard--financial measures, customer knowledge, internal business processes, and learning and growth--offer a balance between short-term and long-term objectives, between outcomes desired and performance drivers of those outcomes, and between hard objective measures and softer, more subjective measures. In the first part, Kaplan and Norton provide the theoretical foundations for the Balanced Scorecard; in the second part, they describe the steps organizations must take to build their own Scorecards; and, finally, they discuss how the

Balanced Scorecard can be used as a driver of change.

The balanced scorecard (BSC) is increasingly the strategic business tool of choice for many organizations. One of the four components of the BSC, ?learning and growth,? is largely misunderstood, underutilized, and ineffectively applied. The BSC framework provides an opportunity for management and workplace learning and performance professionals to communicate through a common language, establish realistic and measurable targets, and align and support the rest of the organization in a strategic way. This book provides proven guidance and customizable tools to measure the role of learning and performance, link it to organizational objectives, and communicate to

management results in a common language.
