Problems and Materials on Secured Transactions Hal Leonard Corporation

Artificial intelligence (AI) technologies are transforming economies, societies, and geopolitics. Enabled by the exponential increase of data that is collected, transmitted, and processed transnationally, these changes have important implications for international economic law (IEL). This volume examines the dynamic interplay between AI and IEL by addressing an array of critical new questions, including: How to conceptualize, categorize, and analyze AI for purposes of IEL? How is AI affecting established concepts and rubrics of IEL? Is there a need to reconfigure IEL, and if so, how? Contributors also respond to other cross-cutting issues, including digital inequality, data protection, algorithms and ethics, the regulation of AI-use cases (autonomous vehicles), and systemic shifts in e-commerce (digital trade) and industrial production (fourth industrial revolution). This title is also available as Open Access on Cambridge Core.

This is a succinct and well-written book introducing a truly interdisciplinary approach to the study of copyright and related issues in contemporary popular culture in relation to the current development of Asian cinema, and questions how copyright is appropriated to regulate culture. It examines the

many meanings and practices pertaining to "copying" in cinema, demonstrating the dynamics between globalization's desire for cultural control and cinema's own resistance to such manipulation. Focusing on the cinema of China, Taiwan and Hong Kong, and film 'piracy' in these countries, the book argues that ideas of cultural ownership and copyright are not as clear-cut as they may at first seem, and that copyright is used as a means through which cultural control is exercised by the cultural big business of the dominant power.
