The first edition of World Fuel Cells - Market Prospects to 2010 examines the development of the fuel cell business to 2010. The report analyses the trends in markets, technologies and industry structure and profiles all the major players. World Fuel Cells - Market Prospects to 2010 includes a fuel cell industry overview, market figures and forecasts to 2010, with analysis, a review of fuel cell technology, company profiles of key fuel cell

developers and a directory of manufacturers. The market report is designed to assist with business plans, R&D and manufacturing strategies. It will be an indispensable aid for managers responsible for business development, technology assessment and market research. For a PDF version of the report please call Sarah Proom on +44 (0) 1865 843181 for price details.

Modern cars are more computerized than ever. Infotainment and navigation systems, Wi-Fi, automatic software updates, and other innovations aim to make driving more convenient. But vehicle technologies haven't kept pace with today's more hostile security environment, leaving millions vulnerable to attack. The Car Hacker's Handbook will give you a deeper understanding of the computer systems and embedded software in modern vehicles. It begins by examining vulnerabilities and providing detailed explanations of communications over the CAN bus and between devices and systems. Then, once you have an understanding of a vehicle's communication network, you'll learn how to intercept data and perform specific hacks to track vehicles, unlock doors, glitch engines, flood communication, and more. With a focus on low-cost, open source hacking tools such as Metasploit, Wireshark, Kayak, can-utils, and ChipWhisperer, The Car Hacker's Handbook will show you how to: -Build an accurate threat model for your vehicle -Reverse engineer the CAN bus to fake engine signals -Exploit vulnerabilities in diagnostic and data-logging systems -Hack the ECU and other firmware and embedded systems -Feed exploits through infotainment and vehicle-to-vehicle communication systems -Override factory settings with performance-tuning techniques -Build physical and virtual test benches to try out exploits safely If you're curious about automotive security and have the urge to hack a two-ton computer, make The Car Hacker's Handbook your first stop.

50 Ways to Do the Job of Congress McFarland

The complete history of Mazda's rotary engine-powered vehicles, from Cosmo 110S to RX-8. Charting the challenges, sporting triumphs, and critical reactions to a new wave of sports sedans, wagons, sports cars ... and trucks!

Automotive News

This study chronicles the success of the Japanese car in America. Starting with Japan's first gasoline-powered car, the Takuri, it examines early Japanese inventors and automotive conditions in Japan; the arrival of Japanese cars in California in the late 1950s; consumer and media reactions to Japanese manufacturers; what obstacles they faced; initial sales; and how the cars gained popularity through shrewd marketing. Toyota, Honda, Datsun (Nissan), Mazda, Subaru, Isuzu, and Mitsubishi are profiled individually from their origins through the present. An examination follows of the forced cooperation between American and Japanese manufacturers, the present state of the industry in America, and the possible future of this union, most importantly in the race for a more environmentally-sound vehicle.

Prof. Dr. U. Jürgens, Wissenschaftszentrum Berlin, is renown for his scientific work in fields like human resources, work organization and organization of production and development, especially for automotive industries. In this publication the authors from different countries discuss practical models of integration in development and production as realized in practice. Time-to-Market is the key for success, efficient integration of development and production necessary to reach the goal. Jürgens himself acts as a publication editor and creates a book reporting about the state of art in automotive and electronics industry. The publication is directed to scientists and is of interest to those practitioners, who have to develop the benchmarks for their own development and production.
