Is it possible to bring university research and student education into a more connected, more symbiotic relationship? If so, can we develop programmes of study that enable faculty, students and 'real world' communities to connect in new ways? In this accessible book, Dilly Fung argues that it is not only possible but also potentially transformational to develop new forms of research-based education. Presenting the Connected Curriculum framework already adopted by UCL, she opens windows onto new initiatives related to, for example, research-based education, internationalisation, the global classroom, interdisciplinarity and public engagement. A Connected Curriculum for Higher Education is, however, not just about developing engaging programmes of study. Drawing on the field of philosophical hermeneutics, Fung argues how the Connected Curriculum framework can help to create spaces for critical dialogue about educational values, both within and across existing research groups, teaching departments and learning communities. Drawing on vignettes of practice from around the world, she argues that developing the synergies between research and education can empower faculty members and students from all backgrounds to contribute to the global common good.

At a time when American higher education seems ever more to be reflecting on its purpose and potential, we are more inclined than ever to look to its history for context and inspiration. But that history only helps, Paul H. Mattingly argues, if it's seen as something more than a linear progress through time. With American Academic Cultures, he offers a different type of history of American higher learning, showing how its current state is the product of different, varied generational cultures, each grounded in its own moment in time and driven by historically distinct values that generated specific problems and responses. Mattingly sketches out seven broad generational cultures: evangelical, Jeffersonian, republican/nondenominational, industrially driven, progressively pragmatic, internationally minded, and the current corporate model. What we see through his close analysis of each of these cultures in their historical moments is that the politics of higher education, both inside and outside institutions, are ultimately driven by the dominant culture of the time. By looking at the history of higher education in this new way, Mattingly opens our eyes to our own moment, and the part its culture plays in generating its politics and promise.

Far from home, they must adapt to a new culture, new university system, and in many cases, a new language. In addition it explains the rules of academic honesty as they are understood in U.S. and Canadian universities. Life beyond the classroom is also covered, with handy sections on living on or off campus, obtaining a driver's license, setting up a bank account, and more. The comprehensive glossary addresses both academic terms and phrases heard while shopping or visiting a doctor. There is even a chapter on the academic calendar and holidays in the United States and Canada. Coming to a new country to study should be an exciting venture, not a baffling ordeal.
