This book includes 110 puzzles, not as individual problems but as incidents in connected stories. The first 31 are amusingly posed by pilgrims in Chaucer's Canterbury Tales. Additional puzzles are presented using different characters. Many require only the ability to exercise logical or visual skills; others offer a stimulating challenge to the mathematically advanced.

In this book Umberto Eco argues that translation is not about comparing two languages, but about the interpretation of a text in two different languages, thus involving a shift between cultures. An author whose works have appeared in many languages, Eco is also the translator of Gérard de Nerval's *Sylvie* and Raymond Queneau's *Exercices de style* from French into Italian. In *Experiences in Translation* he draws on his substantial practical experience to identify and discuss some central problems of translation. As he convincingly demonstrates, a translation can express an evident deep sense of a text even when violating both lexical and referential faithfulness. Depicting translation as a semiotic task, he uses a wide range of source materials as illustration: the translations of his own and other novels, translations of the dialogue of American films into Italian, and various versions of the Bible. In the second part of his study he deals with translation theories proposed by Jakobson, Steiner, Peirce, and others. Overall, Eco identifies the different types of interpretive acts that count as translation. An enticing new typology emerges, based on his insistence on a common-sense approach and the necessity of taking a critical stance.

How music has influenced mathematics, physics, and astronomy from ancient Greece to the twentieth century Music is filled with mathematical elements. The works of Bach are often said to possess a math-like logic, and Arnold Schoenberg, Iannis Xenakis, and Karlheinz Stockhausen wrote music explicitly based on mathematical principles. Yet Eli Maor argues that it is music that has had the greater influence on mathematics, not the other way around. Starting with Pythagoras, proceeding through Schoenberg, and bringing the story up to the present with contemporary string theory, *Music by the Numbers* tells a fascinating story of composers, scientists, inventors, and eccentrics who have played a role in the age-old relationship between music, mathematics, and the physical sciences. Weaving compelling stories of historical episodes with Maor's personal reflections as a mathematician and lover of classical music, this book will delight anyone who loves math and music.

An interior look at Roberto Calasso's work as a publisher and his reflections on the art of book publishing. In this fascinating memoir, the author and publisher Roberto Calasso meditates on the art of book publishing. Recalling the beginnings of Adelphi in the 1960s, he touches on the Italian house's defining qualities, including the considerations involved in designing the successful Biblioteca series and the strategy for publishing a wide range of authors of high literary quality, as well as the historic critical edition of the works of Nietzsche. With his signature erudition and polemical flair, Calasso transcends Adelphi to look at the publishing industry as a whole, from the essential importance of graphics, jackets, and cover flaps to the consequences of universal digitization. And he outlines what he describes as the "most hazardous and ambitious" profile of what a publishing house can be: a book comprising many books, a form in which "all the books published by a certain publisher could be seen as links in a single chain"—a conception akin to that of other twentieth-century publishers, from Giulio Einaudi to Roger Straus, of whom the book offers brief portraits. An essential book for writers, readers, and editors, The Art of the Publisher is a tribute to the elusive yet profoundly relevant art of making books.

Giornale della libreria University of Toronto Press

This text comprises of reviews of work relating to music and mind. It presents a range of approaches from the psychological through the computational, to the musicological. The reviews were selected from papers submitted at the Third International Conference on Music Perception and Cognition Liege 1994 to illustrate the wide range of perspectives now being adopted in studying how humans make and respond to music. The book is divided into five sections. The first part illustrates the role of analysis and ethnomusicology in understanding cultural determinants of musical behaviour. The second part charts what is known about acquisition of musical competence, from pre-birth through to the expert performer. The evidence accumulated about specific areas of the brain which control musical thinking and behaviour is examined in Part Three. The fourth part examines how neurological, behavioural and artificial intelligence approaches are converging to shed light on processes in auditory perception. Finally, Part Five highlights the important developments in how we conceptualize the way in which musical structures are represented in the mind.

Edition and Preface by Javier Lupiáñez The Trio Sonata in G major was independently identified as an early Vivaldian work in 2014 by the Italian scholar, recorder player, and ensemble director Mr. Federico Maria Sardelli and by the Spanish scholar, violin player and ensemble director Mr. Javier Lupiáñez. The piece was recently cataloged as RV 820 in the Vivaldi Catalog and is the earliest known work by Vivaldi. The Trio Sonata presents a different Vivaldi to the one we are used to. It shows the young Vivaldi: On the one hand, clearly influenced by the masters of the end of 17thcentury such Corelli, Bonporti or Torelli, and on the other hand it is easy to perceive that some new and original Vivaldian ideas start to blossom in this early work. The discovery and attribution of this Sonata is very important to understand the roots of Vivaldi's style and the change of musical taste that happened at the beginning of the 18th century.
