introduction Up to now, it has always been the task of marketing to be close to the customer and to know how to reach him in order to ultimately increase sales of the company's product or service. This focus on customer acquisition is widespread among companies, and many companies consider this to be sufficient in order to survive in the business world. Nonetheless, a vital flaw of this common view is that there is more than just focusing all efforts on acquiring new customers - That is, convincing the customer that it pays for him/her to continue doing business with the provider, which is called customer retention. Enter Customer Relationship Management (CRM).

Throughout this paper, the definition of a CRM will be equivalent to the interpretation by Payne and Frow (2005), who state that CRM is a strategic approach that is concerned with creating improved shareholder value through the development of appropriate relationships with key customers and customer segments (Payne and Frow, 2005a). In the 1990s, organizations recognized the need for not relying on customer acquisition all alone, and stressing the relationship with the customer became imperative in the business world's strategic orientation. Unfortunately, implementing CRM systems turned out to

require more work than the plain desire to be chosen as a provider over and over again. A great source of uncertainty was the vague definition of relationship management itself. Another pitfall was how to establish a CRM system in an organization. As relationship management was not up to executives' expectations, many companies were disappointed by the results - And yet, there were companies that succeeded in implementing a CRM system. Testing and diagnosis of hepatitis B (HBV) and C (HCV) infection is the gateway for access to both prevention and treatment services, and is a crucial component of an effective response to the hepatitis epidemic. Early identification of persons with chronic HBV or HCV infection enables them to receive the necessary

care and treatment to prevent or delay progression of liver disease. Testing also provides an opportunity to link people to interventions to reduce transmission, through counselling on risk behaviors and provision of prevention commodities (such as sterile needles and syringes) and hepatitis B vaccination. These are the first WHO guidelines on testing for chronic HBV and HCV infection and complement published guidance by WHO on the prevention, care and treatment of chronic hepatitis C and hepatitis B infection. These guidelines outline the public health approach to strengthening and expanding current testing practices for HBV and HCV, and are

intended for use across age groups and populations.

Compartment syndrome is a complex physiologic process with significant potential harm, and though an important clinical problem, the basic science and research surrounding this entity remains poorly understood. This unique open access book fills the gap in the knowledge of compartment syndrome, re-evaluating the current state of the art on this condition. The current clinical diagnostic criteria are presented, as well as the multiple dilemmas facing the surgeon.

Pathophysiology, ischemic thresholds

and pressure management techniques and limitations are discussed in detail. The main surgical management strategy, fasciotomy, is then described for both the upper and lower extremities, along with wound care.

Compartment syndrome due to patient positioning, in children and polytrauma patients, and unusual presentations are likewise covered. Novel diagnosis and prevention strategies, as well as common misconceptions and legal ramifications stemming from compartment syndrome, round out the presentation. Unique and timely, Compartment Syndrome: A Guide to

Diagnosis and Management will be indispensable for orthopedic and trauma surgeons confronted with this common yet challenging medical condition.

Communication research is evolving and changing in a world of online journals, open-access, and new ways of obtaining data and conducting experiments via the

Internet. Although there are generic encyclopedias describing basic social science research methodologies in general, until now there has been no comprehensive A-to-Z reference work exploring methods specific to communication and media studies. Our entries, authored by key figures in the field, focus on special considerations when applied specifically to communication research, accompanied by engaging examples from the literature of communication, journalism, and media studies. Entries cover every step of the research process, from the creative development of research topics and questions to literature

reviews, selection of best methods (whether quantitative, qualitative, or mixed) for analyzing research results and publishing research findings, whether in traditional media or via new media outlets. In addition to expected entries covering the basics of theories and methods traditionally used in communication research, other entries discuss important trends influencing the future of that research, including contemporary practical issues students will face in communication professions, the influences of globalization on research, use of new recording technologies in fieldwork, and the challenges and opportunities related to studying online multi-

media environments. Email, texting, cellphone video, and blogging are shown not only as topics of research but also as means of collecting and analyzing data. Still other entries delve into considerations of accountability, copyright, confidentiality, data ownership and security, privacy, and other aspects of conducting an ethical research program. Features: 652 signed entries are contained in an authoritative work spanning four volumes available in choice of electronic or print formats. Although organized A-to-Z, front matter includes a Reader's Guide grouping entries thematically to help students interested in a specific aspect of

communication research to more easily locate directly related entries. Back matter includes a Chronology of the development of the field of communication research; a Resource Guide to classic books, journals, and associations; a Glossary introducing the terminology of the field; and a detailed Index. Entries conclude with References/Further Readings and Cross-References to related entries to guide students further in their research journeys. The Index, Reader's Guide themes, and Cross-References combine to provide robust search-and-browse in the e-version.

Principles of Accounting is designed to meet the scope and sequence requirements of a two-semester accounting course that covers the fundamentals of financial and managerial accounting. This book is specifically designed to appeal to both accounting and non-accounting majors, exposing students to the core concepts of accounting in familiar ways to build a strong foundation that can be applied across business fields. Each

chapter opens with a relatable real-life scenario for today's college student. Thoughtfully designed examples are presented throughout each chapter, allowing students to build on emerging accounting knowledge. Concepts are further reinforced through applicable connections to more detailed business processes. Students are immersed in the "why" as well as the "how" aspects of accounting in order to reinforce concepts and promote comprehension over rote memorization.

grade: 2,0, University of Glamorgan, 14 entries in the bibliography, language: English, abstract: Sustainability is developing in as important target for an increasing number of industries and governments. Especially in a faster moving world, which is determined by quarterly period reports, a long term orientation can be a competitive advantage for unlisted companies. In the 1960's by the US Department of Defense began to develop a tool to handle increasing costs. They recognised that the purchase price was not the only important criteria. Training or maintaining costs had to be considered for the total cost calculation, too.

However, several definitions of Life cycle costing (LCC) exist that tend to be similar: 'monitoring the cost incurred throughout a product's life cycle' (Woodward, 1997) or 'LCC is the sum of all costs incurred during the life cycle of a building, system or product. It includes the costs of the project, development, acquisition, operation, conservation and maintenance and salvage value if it exists.' (Goralczyk, and Kulczycka, 2005). In the following essay several functions of life cycle costing will be drawn up. Furthermore, advantages, disadvantages and criticism of this procedure will be analysed.

Springer Nature This book explores afresh the long-standing interest, and emphasis on, the 'special' capacities of primates. Some of the recent discoveries of the higher cognitive abilities of other mammals and also birds challenge the concept that primates are special and even the view that the cognitive ability of apes is more advanced than that of

nonprimate mammals and birds. It is therefore timely to ask whether primates are, in fact, special and to do so from a broad range of perspectives. Divided into five sections this book deals with topics about higher cognition and how it is manifested in different species, and also considers aspects of brain structure that might be associated with complex behavior. Advantages and Disadvantages Najib Fatayerji Essay from the year 2017 in the subject Business economics - Marketing, Corporate Communication, CRM, Market Research, Social Media, grade: 1.8, , language: English, abstract: In the contemporary world, there is no business without

communication. To most entrepreneurs in the 21st century, social media use in business is seemingly the "next big thing". The emergence of an online technology that allows reaching of big crowds without necessarily meeting them has presented a temporary yet essential fad that ought to be appropriately made use of while it is still in the spotlight. To this group of entrepreneurs, reaching out the virtual market has presented itself as a stepping-stone to, not only establish their brands, but also to make it earn acceptance in the market. Others have even gone further to establish online shops where customers can easily order and wait for their products to be

delivered without having to necessarily visit the product stores. Unfortunately, however, there exists a population to which social media marketing is a buzzword without any practical advantage and steep. They envision it to be a complicated learning curve that further makes their business life unexpectedly complex. With regards to the different approaches to social media, this paper will look at both the negative and the positive aspects of using social media as a tool for running business operations.  The American Anti-Vivisection Society (AAVS) petitioned the National Institutes of Health (NIH) on April 23, 1997, to prohibit the use of animals in the production of mAb. On September 18, 1997, NIH declined to prohibit the use of mice in mAb production, stating that "the ascites method of mAb production is scientifically appropriate for some research projects and cannot be replaced." On March 26, 1998, AAVS submitted a second petition, stating that "NIH failed to provide valid scientific reasons for not supporting a proposed ban." The office of the NIH director asked the National Research

Council to conduct a study of methods of producing mAb. In response to that request, the Research Council appointed the Committee on Methods of Producing Monoclonal Antibodies, to act on behalf of the Institute for Laboratory Animal Research of the Commission on Life Sciences, to conduct the study. The 11 expert members of the committee had extensive experience in biomedical research, laboratory animal medicine, animal welfare, pain research, and patient advocacy (Appendix B). The committee was asked to determine whether there was a scientific necessity for the mouse ascites method; if so, whether the method caused pain or distress; and, if so,

what could be done to minimize the pain or distress. The committee was also asked to comment on available in vitro methods; to suggest what acceptable scientific rationale, if any, there was for using the mouse ascites method; and to identify regulatory requirements for the continued use of the mouse ascites method. The committee held an open data-gathering meeting during which its members summarized data bearing on those questions. A 1-day workshop (Appendix A) was attended by 34 participants, 14 of whom made formal presentations. A second meeting was held to finalize the report. The present report was written on

the basis of information in the literature and information presented at the meeting and the workshop.

Near Earth objects (NEOs) have the potential to cause significant damage on Earth. In December 2018, an asteroid exploded in the upper atmosphere over the Bering Sea (western Pacific Ocean) with the explosive force of nearly 10 times that of the Hiroshima bomb. While the frequency of NEO impacts rises in inverse proportion to their sizes, it is still critical to monitor NEO activity in order to prepare defenses for these rare but

dangerous threats. Currently, NASA funds a network of ground-based telescopes and a single, soon-to-expire space-based asset to detect and track large asteroids that could cause major damage if they struck Earth. This asset is crucial to NEO tracking as thermal-infrared detection and tracking of asteroids can only be accomplished on a space-based platform. Finding Hazardous Asteroids Using Infrared and Visible Wavelength Telescopes explores the advantages and disadvantages of infrared (IR) technology and visible wavelength observations of NEOs. This report reviews the techniques that could be used to obtain NEO sizes from an infrared

spectrum and delineate the associated errors in determining the size. It also evaluates the strengths and weaknesses of these techniques and recommends the most valid techniques that give reproducible results with quantifiable errors.

There is no doubt that electronic marketing has contributed positively in the life of modern societies, mainly the consuming societies. It allowed purchasing of materials cheaply without any limit, and without any restrictions. It also

gave the chance to make a free selection and comparison between the prices of goods at the electronic department stores throughout the Internet. All such facilities are given to the consumers in a very short time without causing them to leave their office or home. In addition, the Electronic Marketing has exterminated the monopoly of goods and materials, all such acts of course are for the consumer's benefit. However, in addition to such advantages there are many disadvantages of such type of marketing; the Electronic Marketing has deleted the privacy of the consumer, because all of his movements through the Internet have been divulged and under

control, in addition to lack of exclusive security through the Internet. Accordingly, many losses equally occurred to the customer and the merchant due to such acts of hackers who reveal the information and credit cards details. In addition, the Electronic Marketing caused many merchants, agents and monopolists to be vanquished because it gave the chance for direct communications between the producer and the consumer without passing through them; as such, many of such merchants have been yielded away from the way of this new technology. The Electronic Marketing was able to cause an upset down in many concepts and

standards of economic science that have existed for so many years. Doors are still open for every new in this assumption and endless world as there are no limits that can stop such human ambition.

Academic Paper from the year 2018 in the subject Pedagogy - Common Didactics, Educational Objectives, Methods, language: English, abstract: This work focuses on Future Education and its characteristics. Thereby it will have a closer look at the advantages and

disadvantages of Online Education. Over the past several decades the rapid technological advancement has had an impact on every aspect of human life and education has been one of the most important beneficiaries of this phenomenon. However as technology continues to take a central role in today's society, educational experts and professionals have raised concerns on the possible impacts that this will have not just on the system but also on the students and the society as whole. Some critics arguing that technology would in the future replace human intelligence. This, they argue would be as a result of the assumption of control by technologies over a

considerable measure of undertakings and capacities that educators have been educating their students in the conventional education system. It is the position of this paper that despite the rise of technology and the central role it is now playing in the society, Education faces no threat, rather with the changing world; technology will only be driving force behind the restructuring of the education model as it aligns itself to the global changes. Cambridge, language: English, abstract: The application of traditional recruitment techniques do not suffice anymore and are also not well-timed in order to bring in satisfactory pool of competent candidates. Through early-1990s, with the progression associated with online technologies, many have experienced the particular shift for the traditional recruitment techniques to e-recruitment. The web-based recruitment blends software programs as well as infrastructure, in addition to resume repositories which assist the particular clients in their recruitment operations. Internet lookups are actually very popular among the people looking for work.

Resumes delivered via the web as well as through e-mail could be scanned to get key phrases, determining essential information, abilities, proficiency, as well as working experience, hence lowering hands-on procession and probable mistakes. This elevates the effectiveness around choosing competent as well as a trustworthy workforce, lowers long term turnover, and recruits completing online documents presumptively use much less resources compared to that that post papers application packages. Companies can access job hunters spanning the planet and usually get far more applications. The process is cheaper for companies and also more expedited. Even

though career boards have the ability to deal with extremely high quantities of both people looking for work as well as employers, they tend to not achieve high quality. The systems are not simple and also harmless enough to be made use of by comparatively unskilled end users; they lack a 'personal feel', raise confidentiality, security, authentication, and cheating issues. The systems additionally discriminate against some applicants due to badly developed hiring platforms. Integration of e-recruiting with convectional recruiting may also be
